WILFLEY SAND PUMPS

*Wilfley 10"
Sand Pumps
Ready for Shipment*

LOW COST PUMPING through

- Maintained High Efficiency
- Maintenance-Free Service
- Long Pump Life
- Quick, Easy Replacement of Parts
- Individual Engineering
on Every Application

Lower pumping costs plus increased output make Wilfley Sand Pumps the No. 1 choice of economy-minded plant operators.

If you require belt-driven, overhead V-belt driven, or direct driven pumps, Wilfley has them — available in 1", 1½", 2", 2½", 3", 4", 5" 6", 8" and 10" discharge sizes. They may be fitted with interchangeable electric furnace alloy iron, special application alloys or rubber-covered wear parts.

Write, wire or phone for complete details.

New York City 17

COMING EVENTS

- Aug. 6-7, AIME Colorado Plateau Section, annual jeep trip.
- Aug. 15-25, International Geological Congress, Copenhagen, Denmark; for information, write Mineralogical-Geological Museum, University of Copenhagen, Oster Voldgade 7, Copenhagen K, Denmark.
- Aug. 20, AIME Adirondack Section, golf outing followed by panel discussion, program, Tupper Lake, N. Y.
- Aug. 22-26, Western Resources Conf. sponsored by University of Colorado, Colorado State University, and Colorado School of Mines on "Water Measuring and Meeting Future Requirements," Lindsay Memorial Courtroom, Fleming Law Building, University of Colorado, Colo.
- Sept. 8-9, SME Coal Div. and AIME St. Louis Section, joint meeting, Chase Park Plaza Hotel, St. Louis.
- Sept. 12-16, Pan American Congress on Engineering Education, Buenos Aires, Argentina.
- Sept. 12-18, International Mining Congress, sponsored by the Hungarian Mining & Metallurgical Soc., Budapest, Hungary.
- Sept. 15-16, 8th annual Engineering Management Conference, sponsored by AIME, AIEE, AICHE, American Inst. of Industrial Engineers, ASCE, ASME, IRE, Morrison Hotel, Chicago.
- Sept. 19-23, 7th Convention of Pan American Assn. of Engineering Socs., Buenos Aires, Argentina.
- Sept. 24, AIME Adirondack Section, mine or mill tours through industrial minerals plant of Gouverneur Talc Co., Gouverneur, N. Y. Dinner at Gouverneur Country Club.
- Sept. 27-Oct. 1, symposium on "Physics of Electrostatic Forces and Their Applications," Laboratoire d'Electrostatique et de Physique du Metal, Institut Fourier, Place du Doyen-Gosse, Grenoble, France.
- Oct. 4-5, SME Board Meeting, Brown Palace Hotel, Denver; AIME Board Meeting, Denver Hilton Hotel, coinciding with SPE Fall Meeting.
- Oct. 5, AIME Colorado Plateau Section meeting. Talk by AIME President Joseph L. Gillson.
- Oct. 5-7, AIME Rocky Mountain Minerals Conference, Utah Section host, Newhouse Hotel, Salt Lake City.
- Oct. 6-8, 9th National Clay Conference, Purdue University, Lafayette, Ind.
- Oct. 7-8, Third Quinquennial Alumni Reunion of Minnesota School of Mines and Metallurgy. Open House and technical session, banquet-dance; Northwestern vs Minnesota football game, University of Minnesota, Minneapolis.
- Oct. 10-13, American Mining Congress, Mining Show (metal mining-industrial minerals convention, exposition), Convention Center, Las Vegas, Nev.
- Oct. 17-18, Symposium on Surface Mining Practices, College of Mines, University of Arizona, Tucson, Ariz.
- Oct. 17-19, Drilling and Blasting Symposium, sponsored by Colorado School of Mines, Pennsylvania State University, and University of Minnesota, Colorado School of Mines, Golden, Colo.
- Oct. 24-25, AIME-ASME Joint Solid Fuels Conference, Daniel Boone Hotel, Charleston, W. Va.
- Nov. 4, AIME Pittsburgh Section, Off-the-Record meeting, Penn-Sheraton Hotel, Pittsburgh.
- Nov. 7-10, Soc. of Exploration Geophysicists, annual international meeting, Galveston, Texas.
- Nov. 15-16, Anthracite Conference, technical and scientific aspects of anthracite utilization, The Pennsylvania State University, University Park, Pa.
- Nov. 18, American Mining Congress, coal division conference, Penn-Sheraton Hotel, Pittsburgh.
- Dec. 3, AIME Colorado Plateau Section, technical meeting, election of officers, WAAIME dinner-dance, Grand Junction, Colo.
- Dec. 5, AIME Arizona Section annual meeting, Pioneer Hotel, Tucson, Ariz.
- Feb. 22-25, 1961, International Symposium on Mining Research, sponsored by U. S. Bureau of Mines and Missouri School of Mines and Metallurgy, Rolla, Mo.
- Feb. 26-Mar. 2, AIME Annual Meeting, Chase Park Plaza Hotel, St. Louis.
- Apr. 12-14, International Symposium on Agglomeration, sponsored by SME, SPE, and TMS of AIME, Hotel Sheraton, Philadelphia.
- Sept. 17-20, Commemoration of the 50th Anniversary of Froth Flotation in the U.S.A., sponsored by AIME: Society of Mining Engineers' Mineral Beneficiation Division, Cosmopolitan Hotel, Denver.

MINING engineering

VOL. 12 NO. 7

JULY 1960

COVER The colorful miner on the cover is a reminder of the times 89 years ago when AIME was founded. The Directory in this issue is one measure of the growth of mining engineering since those days. Artist Herb McClure.

PERSONNEL

THESE items are listings of the Engineering Societies Personnel Service Inc. This Service, which cooperates with the national societies of Chemical; Civil; Electrical; Mechanical; Mining; Metallurgical; Petroleum Engineers, is available to all engineers, members and non-members, and is operated on a nonprofit basis. If you are interested in any of these listings, and are not registered, you may apply by letter or resume and mail to the office nearest your place of residence, with the understanding that should you secure a position as a result of these listings you will pay the regular employment fee of 60 pct of the first month's salary if a nonmember, or 50 pct if a member. Also, that you will agree to sign our placement fee agreement which will be mailed to you immediately, by our office, after receiving your application. In sending applications be sure to list the key and job number. When making application for a position, include \$6 in stamps for forwarding application to the employer and for returning when possible. A weekly bulletin of engineering positions open is available at a subscription rate of \$3.50 per quarter or \$12 per annum for members, \$4.50 per quarter or \$14 per annum for nonmembers, payable in advance. Local offices of the Personnel Service are at 8 W. 40 St., New York 18; 57 Post St., San Francisco; 29 E. Madison St., Chicago 1.

In addition to the listings below, ESPS maintains a more complete file of general engineering positions and men available. Contact nearest ESPS office, listed above. The New York office of ESPS will be open Thursdays until 7:00 P.M. for interviews.

MEN AVAILABLE

Mine Manager, B.Sc. in mining and metallurgical engineering. Twenty-five years mining all capacities. Location, immaterial. M-544.

Geologist, B.S. in geology 1954, age 32. Experienced preparation of maps and reports regarding occurrence, distribution, and geological conditions underground water supply; underground sampling; logging drill cores. Location, domestic or foreign. M-545.

Research Minerals Engineer, M.S. in mining. Seven years experience laboratory and chemical development, six years experience, examination, and geophysics. Fluent French and some Portuguese. Desire laboratory or office work. Location, immaterial. M-546.

Mining Engineer, B.Sc. in mining, age 30, married, no children. Desire responsible position progressive company. Experienced underground and open pit mining engineering. Prefer Northwest and north central U. S. M-547.

Metallurgist, Australian graduate, age 32. Eleven years experience in Africa. Previous employment has covered development of processes for base metal ores, erection, and operation of concentrators. Married, no children. Will consider any location. Presently employed as mill superintendent. M-548.

Manager-Mining, Superintendent, B.S., M.S. in mining engineering. Broad background in open pit placer mining, cost, market, ore reserves studies. Experienced mine planning, budgets, company liaison mine plants, safety and personnel management. Production methods. Prefer U. S. M-550.

Maintenance Superintendent Mechanical Engineer, B.S. mechanical engineering, age 34. Twelve years experience in potash mining, milling, and processing as mechanical, production, project, and plant engineer. Four years maintenance administration experience. Prefer warm climate; home New Mexico. M-1106-Chicago.

Mining Engineer or Supervisor, B.S. in mining and civil engineering. Twelve years experience including surveying, exploration operations, marketing, examinations, economics. Prefer U. S. M-551.

Assistant Mine Superintendent, age 54. Eleven years experience mine survey and development; seven years assistant mechanical superintendent petroleum works; 12 years chief mine engineer; seven years mine superintendent of small organization on lead, zinc, gold, and copper mines. Prefer South America, low elevation. M-552.

Manager, mining engineer (Canada), 44. Ten years experience mining, last six as manager of mining, rock excavation, and tunnelling. Three years manager of construction for rock drilling. \$10,800. Prefer Southwest, or any. Home: Mexico. Se-1487.

Superintendent, mining engineer, 39. Nine years experience, in charge of exploration, development, mining, underground, and surface production on mining and milling operations. \$9000. Prefer Western U. S. Home: California. Se-1453.

Mining Geologist or Sales, geologist, 30. Two years mining geology, examination and sampling, geology, topographic surveys for mining company. One year seismologist, computer, surveyor on exploration. \$5200. Any location. Home: New York. Se-1381.

General Manager, Superintendent, 46. Broad experience in exploration, development, construction, and operation of metal mines. Last seven years in uranium. Hard worker, adaptable, gets results. Excellent record as general manager and superintendent of successful, low-cost, high-production, underground operations. Experienced with modern, trackless, underground mining equipment. Presently employed as manager. Prefer U. S. or Canada. Salary open. Home: Colorado. Se-1262.

Superintendent, Manager, mining engineer, 39. Experienced in management, 15 years experience underground, some open pit. Experienced underground diesel equipment mining and open and shrink stoping. Solid background as chief engineer, mine and general superintendent, general manager. Salary open. Prefer Midwest U. S. Home: Southwest. Se-1099.

ENGINEERS

Mechanical, Chemical and Extractive Metallurgical engineers with outstanding qualifications to fill production, development and engineering positions in processing plants located at Rifle and Uravan, Colorado. Send resume and copy of college transcript to:

Union Carbide Nuclear Company
Division of Union Carbide Corporation
P. O. Box 1049
Grand Junction, Colorado

Mining Geologist, mining engineer, 23. Ten months as highway engineer for Forest Service. Five months student assistant for university, compiling data for research on ammonium nitrate. Three months as engineer trainee for copper mining. \$6000. Prefer foreign, western U. S.

Superintendent or Chief Engineer, geological engineer, 32. Professional engineer in Canada. Two years experience exploration and open pit engineering. Four years experience construction supervision and management; seeking position with mining organization, nonmetallic minerals, open pit coal or iron ore preferred. Salary open. Any location. Home: Canada. Se-1224.

Mining engineer, graduate mining engineer, 26. Two years with leading mining and construction equipment manufacturer working with compressors and all types of rock drilling equipment, open pit and claim, road, highway, and underground survey. Operate many types of heavy equipment. \$6500. Prefer central California. Home: California. Se-1165.

Mine Engineer, mining engineering, 32. Young, ambitious, experienced all phases open pit and underground; exploration, development, and production. Want production or engineering assignment with challenge and opportunity. \$7500. Prefer South. Home: Arizona. Se-878.

Geologist, Mine Engineer, geologist, 37. Five months consultant, examination, exploration, development of mineral deposits. Nine years experience planning, layout, mine production, quality control, exploration and development, construction, maintenance of engineering records and reports, supervise drilling, mine sampling for underground and open pit operations; mining and smelting facilities. \$7200. Prefer Southwest, West, foreign. Home: Arizona. Se-781.

Manager, Superintendent, mining engineer, 45. Fourteen years experience in design and construction of mine plants, set up production, schedule, plan mining operations, supervise operation for mine, mill, and smelters. \$12,000. Prefer West, South, East. Home: Wyoming. Se-320.

Mine Superintendent, mining engineer, 36. Five years supervisory experience in underground mines. Seven years experience as sales and technical representative for major explosives manufacturer. \$8,400 to \$10,800. Prefer South, Southwest. Home: Northwest. Se-1330.

Mining Geologist, geologist, 33. Four years experience (quicksilver and tungsten) geologic mapping, mine engineering, exploration and development, planning on underground mines. Mine and prospect examination, drafting, report writing. Have operated own retail business. \$6600. Prefer western U. S., foreign. Home: California. Se-1008.

Geologist, geological engineering, 30. Two summers as field geologist in iron industry. Five months experience as quarry engineer in nonmetallic industry as part of management training program. One year experience supervisory with 15 to 24 man crews. \$7200. Prefer: West, Alaska, north Midwest. Home: Nevada. Se-902.

(Continued on page 632)

FOREIGN EMPLOYMENT

GENERAL MINE FOREMAN

B.S. in Mining Engineering. Position also requires fluent knowledge of Spanish and English. Should have several years in responsible supervisory position in underground mining, preferably block caving. Primary functions would be to translate into execution all planning and coordinate all operations required for the mining of 34,000 tons daily.

Excellent opportunity large copper company, Chile, South America. 2 year contract with transportation both ways and salary while traveling paid by Company. In reply give complete details.

BOX 60ME7
Mining Engineering
29 W. 39th St.
New York 18, N. Y.

Dramatic photo
shows flammability
of conventional
hydraulic oil.

Flame tests prove fire-resistant properties of this hydraulic fluid

Not so dramatic,
but... see how
Shell 3XF Mine Fluid
resists flame.

Photos: courtesy U. S. Bureau of Mines

First low-cost fire-resistant mine fluid!

SHELL
3XF MINE FLUID
HAS BEEN TESTED
BY U.S. BUREAU
OF MINES AND
IS NOW IN USE

Now—for the first time in mining history—an inexpensive, fire-resistant emulsion-type hydraulic fluid is available for mine equipment use—3XF* Mine Fluid.

No major modification of equipment is necessary—Shell 3XF is a direct replacement for ordinary hydraulic oils now in service.

Convenient to use—Shell 3XF Mine Fluid, furnished as a concentrate, is mixed with water to prepare the emulsion at the mine location.

Proof of its fire-resistant qualities—In addition to recommending the use of fire-resistant hydraulic fluids in min-

ing machinery, the Bureau of Mines has evaluated 3XF Mine Fluid using test methods that determine fire-resistant properties, and accepted it for mine evaluation, pending the establishment of a Bureau approval schedule.

For complete information on 3XF Mine Fluid, write or call Shell Oil Company, 50 West 50th Street, New York 20, New York, or 100 Bush Street, San Francisco 6, California. In Canada: Shell Oil Company of Canada, Limited, 505 University Avenue, Toronto 2, Ontario.

SHELL 3XF MINE FLUID

PERSONNEL

(Continued from
page 630)

Mining Engineer, Foreman, mining engineer, 28. Two years exploration development work, diamond drilling, drifting, mapping, cost, estimates, design, equipment procurement surveyor, contract measurement. Four years part-time miner. \$6500. Prefer U. S., foreign. Home: California. Se-741.

POSITIONS OPEN

Supervisor, Production, graduate mining engineer, with minimum of ten years supervisory experience in open pit mine handling 30,000 to 50,000 tpd; must have complete command of working Spanish language. Will be responsible for mine production of a specific zone in large open pit mining operation. Responsible for controlling shovel movements and output, direction of truck haulage, and coordination with railroad operations. Salary, \$10,200 year to start. Location, South America. F9085.

Vice President-General Manager to head up team to organize the management and administration of a government-owned mining operation. Mining experience not required but must have experience in investment and corporation management. Salary, \$25,000 year plus or minus. Location, Mediterranean area. F9083.

Technical Consultant, graduate mining or metallurgical engineer, experienced in the design of beneficiation or washing plants for iron ore mining. Plant in Liberia being designed by U. S. manufacturer. Will coordinate and act as liaison between mines and service organ in New York. Salary, \$12,000 to \$15,000 year. W9076.

Assayer to take charge of fire assaying for gold and silver in quartz ore; also must have experience in wet assaying for base metals. Salary, \$4200 to \$8800 year and up depending on experience, plus two and a half months salary as required by local law. Location, South America. F9072.

Process Engineer with field experience in open quarry operations; should also be qualified to perform the detail engineering jobs of process study, equipment investigation, layout design, etc. and supervise erection and initial operations of stone crushing and screening plants. Knowledge of crushers, conveyors, screens, stone washing plants, and preferably some experience with lime desired. Location, South. W9029.

Mining Engineer, experienced working a limestone quarry. Headquarters, Pennsylvania.

Development Engineer, graduate, some experience desirable. For development work in area of explosives and propellants. Salary open. Southwest. For a chemical company. SJ-5289.

Mining, Civil or Mechanical Engineer, minimum three years experience, preferably more, in design, computation and layouts on structural steel and heavy equipment used in open pit and underground mining and milling plants. Must be familiar with typical mine and mill plant engineering-type operation and able to furnish sound advice and recommendations on structural elements for installing new equipment and revamping existing plant. \$7200 to \$7800. Idaho. SJ-5263-R.

Mine and Mill Superintendent, mining engineer. 35 to 60. Field man in charge of mine and mill, experienced in underground gold mining. Must speak Spanish and be able to take charge of maintenance, repair of diesel engine equipment, mining, milling operations as work superintendent or field manager for 50-tpd underground gold mine. In very remote area, will have to go single status first; then bring family. \$9000 plus room and board. At least one year's work, may be permanent. Mexico (5000 ft elevation). SJ-5263.

Mine Engineers, graduates and some experience either in underground nonmetallics or deep coal mining. For production planning, cost forecasting, layout of mining systems, design of installations such as conveyors, shafts, raises, etc. and also routine mine operating problems. For mine engineering staff of eleven. 14,000 tpd. Salary open. Southwest. SJ-5260.

Junior Mining Engineer, recent graduate from schools on West Coast, Minnesota, Michigan or eastern states, military service completed. Will receive training in underground and open pit mining and principal duties will be investigation and design for advanced open pit mining method. Salary open southern California. SJ-5252.

Mining Geologist, graduate, 28 to 35, about five years experience. For general geological duties applicable to operating mine. Involving underground geological mapping, surveying, stope mapping, and assisting engineering department. Salary open. Colorado. SJ-5249.

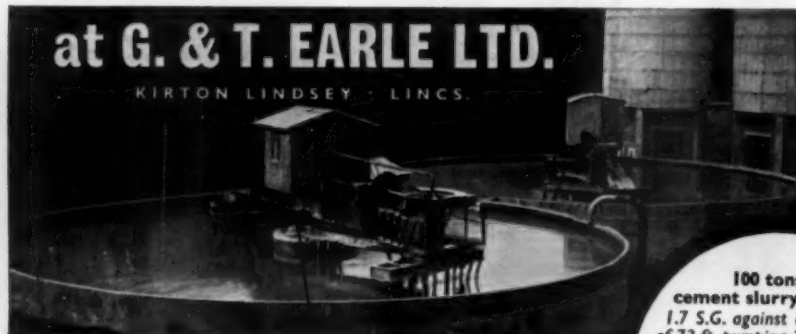

Mining Superintendent, 45 to 55, at least 20 years experience with underground mining (preferably room and pillar, but ability to supervise mine and camp and handle men). Knowledge of earth-moving diesel equipment, mining equipment, working knowledge of surveying, ventilation and electrical installations. Supervise all mining operations as well as mining camp. Car furnished. Salary open. Living quarters, but no school facilities for children. (50 miles from nearest town.) Desert area of eastern California. SJ-5248.

Mining Geologist, geologist or mining engineer, young. Two years or more working experience in mining engineering and surveying, including sampling, assaying, chemistry for lab work and geological investigations. Work in small mine and a knowledge of mercury would be helpful. For mercury mining company. \$6000 to \$7200. California. SJ-5243.

Soils Engineer, young, duties would primarily be in the field logging and sampling of undisturbed soils for foundations investigations. Some laboratory and office work would also be required from time to time. \$6200 to \$7200. Southern California. SJ-5231.

Throughout the Americas...

More mines are STANDARDIZING on P&H ELECTRIC SHOVELS

...more evidence that
one P&H always sells another

Look at the evidence: Count the P&H Electric Shovels now in use in each of the mines shown here. It's the same story you'll find in mine after mine: once a P&H electric shovel is on the job, performance records show production increases and lower unit costs that simply make it good business to standardize on P&H. Because more mines are following this trend, Harnischfeger now is the world's largest builder of full electric and diesel-electric shovels.

P&H Electric Shovels incorporate many dramatic new design fundamentals which make them different from all others.

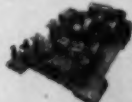

Foremost is MAGNETORQUE® drive—the exclusive *patented* hoist drive that puts more material into the dipper, faster—with every pass! It is the most productive digging motion drive known for electric shovels, producing higher bail pull, greater dipper fill factor and automatic impact protection for the hoist machinery.

FIVE EXCLUSIVE P&H FEATURES

MAGNETORQUE DRIVE

Electro-magnetically transmits full digging power of A.C. motor direct to dipper—without motor generator set conversion to D.C. current.

FULL WELDED STEEL CONSTRUCTION

Unit-welded rolled steel design pays dividends in exceptionally long shovel life in hard digging.

ENCLOSED HOIST MACHINERY

No open gearing—all power trains for hoist, swing and propel drives are enclosed in oil-tight gear cases.

INDEPENDENT CRAWLER PROPEL MOTION

P&H gives you independent motors for each function—the basic principle of electric shovel design and purpose.

HIGH STRENGTH T-1 STEEL

Only Harnischfeger uses it as *standard* in fabricating a boom and dipper handle with highest impact absorption ability.

Another major reason why "One P&H Always Sells Another" is single-source responsibility for service. Harnischfeger is the only shovel manufacturer which makes its own electrical as well as mechanical com-

ponents—all designed and matched by a single manufacturer *specifically for balanced electric shovel production cycles*. For more information write Harnischfeger Corporation, Milwaukee 46, Wisconsin.

BOOKS

Order directly from the publisher all books listed below except those marked • • • The books so marked (• • •) can be purchased through AIME, usually at a discount. Address Irene K. Sharp, AIME Book Dept., 29 W. 39 St., New York 18, N. Y.

Correction

On page 304 of the April issue we listed the British publisher and price for **Gold** by C. H. V. Sutherland. Since then we have received notice that the book has been published here by McGraw-Hill Book Co. Inc. at \$7.95 and orders for the British edition cannot be filled.

Metal Statistics 1960, *American Metal Market*, 18 Cliff St., New York 38, N.Y., 830 pp., \$3.50, 1960.—The 53rd edition of the Little Red Book has supplemented its present statistical information on ferrous and nonferrous metals with new tables on wage history in the steel industry, primary pig aluminum prices in U.S., world tin plate production, spiegeleisen production and consumption, iron and copper powder shipments in US, and uranium ores and concentrates in US.

Asbestos by W. E. Sinclair, second edition, *Mining Publications Ltd.*, 482 Salisbury House, London Wall, London E.C. 2 England, 536 pp., \$10.50, 1959.—This new edition contains several new chapters dealing with primary production and the manufacture of asbestos products in North America, a field recently visited by the author. These chapters include a geological appraisal of the future potential in the area, details of actual mining and milling at the various producing centers, and descriptions of the latest fabrication techniques. This aspect has been brought up to date in respect of all the main world producing and manufacturing fields. Relevant sta-

tistics covering production, distribution, marketing, and prices are included. The basic chapters dealing with the origin of the asbestos minerals and the record of recovery, from source to final uses, have been revised, with the description of new discoveries and particulars of recent developments in various branches of the industry. • • •

Canadian Mines Register of Dormant and Defunct Companies, *Northern Miner Press Ltd.*, 116 Richmond St., Toronto 1, Canada, 420 pp., \$15, 1959.—A valuable reference work listing more than 13,000 companies no longer in business; some recently defunct, others out of existence for close to a century. Gives information on successor companies, values of shares, and exact status at present. • • •

Minerals of New Mexico by Stuart A. Northrop, revised edition, *University of New Mexico*, Albuquerque, N.M., 681 pp., \$10, 1960.—This volume includes descriptions and records of the place of occurrence of every mineral found in New Mexico arranged alphabetically and cross referenced. In addition it contains a history of mineralogy and mining in the state and the economic aspects of New Mexico's mineral industry. • • •

Future of Non-Ferrous Mining in Gt. Britain and Ireland, *The Inst. of Mining and Metallurgy*, 44 Portland Pl., London W. 1, England, 614 pp., \$8.40 (60s), 1959.—This volume contains the proceedings of a Symposium arranged by the Institute and the United Kingdom Metal Mining Assn. held in September 1958. The purpose of the Symposium was to review the mineralized areas of Great Britain and Ireland and discuss technical and economic problems affecting their exploration and development; to make an appraisal of the potentialities of the industry and to point the way to its revival. Twenty-four papers were presented. These plus discussions of the papers make up the volume. • • •

Copper Costs and Prices: 1870-1957 by Orris C. Herfindahl, *The Johns Hopkins Press*, Baltimore 18, Md., 272 pp., \$6, 1959.—This study sponsored by Resources for the Future

Inc. attempts to develop some relevant evidence on cost for one important natural resource commodity and, in the process, to throw some light on the general problem of long-run cost increase that will be of use in the study of other commodities. It is divided into three parts with chapter 1 serving as an introduction. Part 1 covers market

(Continued on page 638)

The forthcoming **Annual Edition of The Engineering Index-1959** will be ready for distribution in June 1960. Advance orders are now being accepted because there is a limited edition of this important annual volume which has served the engineering profession for over 75 years. The annotated reference items published provide a comprehensive digest of the important information on technical, scientific, and economic problems as recorded last year in engineering magazines, special bulletins, and government reports gathered from all over the world. The forthcoming volume will contain annotations on over 30,000 articles in 249 fields of engineering interest. It will devote over 100 pp. to the list of authors covered in more than 1500 technical periodicals. It includes a list of these publications of engineering, scientific, and technical societies, engineering and industrial periodicals, and publications of government bureaus, engineering experiment stations, universities, and other research organizations. Not all articles in these publications are indexed, selection is made on the basis of articles dealing with the art and science of engineering.

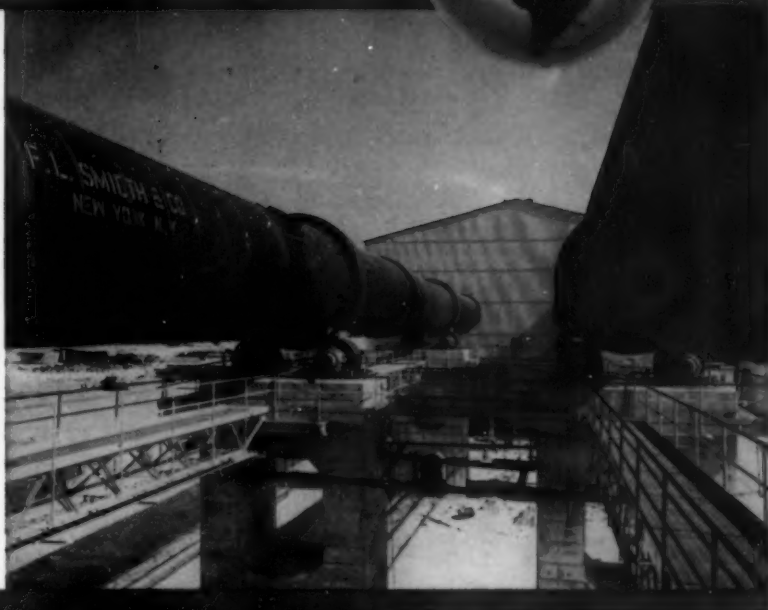

The Engineering Index, located in the Engineering Societies Building at 29 W. 39th St., New York 18, N.Y., is a nonprofit organization which works closely with The Engineering Societies Library. • • •

SMIDTH

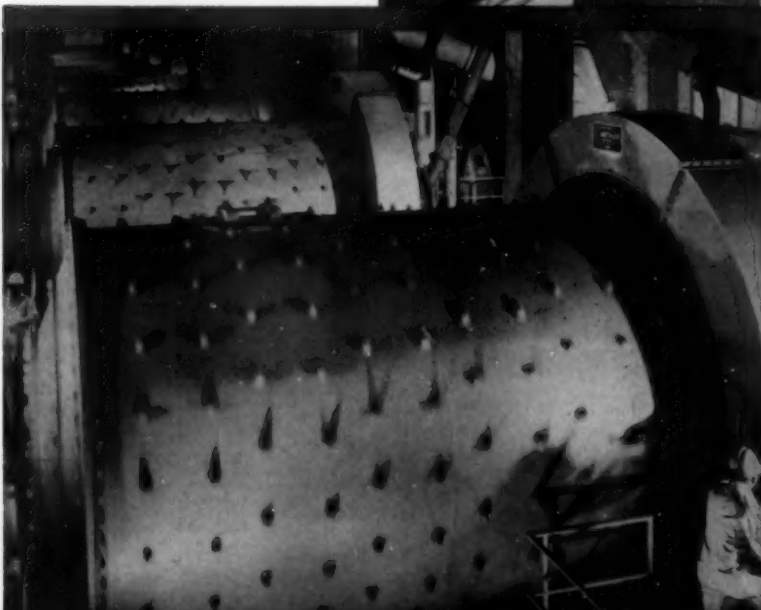

rotary kilns

For sintering, nodulizing, calcining, desulphurizing, oxidizing and reducing roasting. Coolers, precoolers, preheaters, recuperators. Auxiliary equipment for Rotary Kiln Plants.

grinding mills

Ball mills, tube mills and multicompartiment mills—open or closed circuit—wet or dry grinding. Also airswept for grinding and drying. Over 1250 Smidth Rotary Kilns and over 5000 Grinding Mills supplied all over the world.

looking toward IMPROVED PRODUCTION ... look to Hardinge !

The large diameter, short-length trunnions used on Hardinge Conical Scrubbers permit chute feeding of unsized ore and rock at rates up to 800 tons per hour. The superincumbent mass action of the charge quickly slurries the clay and dirt, permitting ready separation on washing screens or trommels.

Hardinge Scrubbers are in wide use in cleaning such diversified materials as limestone, phosphates, iron ore, river gravel, ganister rock, dolomite, abrasives, and in separating clay from rock and gravel.

HARDINGE CONICAL SCRUBBERS

A 10' diameter by 84" long Hardinge Conical Scrubber scrubbing 5" iron ore.

A Hardinge Scrubber bearing—inside diameter 50".

Physics and Geology by J. A. Jacobs, R. D. Russell, and J. Tuzo Wilson, McGraw-Hill Book Co., Inc., 436 pp., \$9.75, 1959.—This book describes the nature, composition, and behavior of the earth by integrating information from geophysics, geology, and geochemistry. The subject matter is broad in scope. Subjects from pure geology and from geophysics are overlapped in an effort to unite these two disciplines. Special emphasis is given to the solid earth, although certain aspects of the physics of the upper atmosphere are included. • • •

Silhouettes of Charles S. Thomas by Sewell Thomas, The Paxton Printers Ltd., Caldwell, Idaho, 276 pp., \$7.50, 1959.—In the course of this biography, there is much new historical material about the boom mining towns of the West and the early-day labor difficulties in the mines. • • •

Engineering College Research Review 1959, The American Soc. for Engineering Education, Urbana, Ill., 470 pp., \$2, 1959.—This biennial report lists active research projects, as well as giving information about the research policies, personnel, administration officers, and magnitude of the research program for each of the member colleges and universities. • • •

A DIAMOND BIT...

*Custom designed by
Christensen for your
drilling requirements*

Whatever your drilling needs—underground or on the surface, exploration or blast holes, shallow or deep drilling with air, water or mud—you'll find that Christensen Diamond Bits are your assurance of drilling at "less cost per foot."

Christensen Diamond Bits cut straighter holes, last longer and cut even the hardest rock economically.

And, regardless of your job location or scope of operations, there's an experienced Christensen field consultant available to recommend the right "custom designed" bit for your job. This means that you can be confident that the diamond size and pattern, waterways, matrix hardness and bit style correctly meet your drilling conditions.

"Less cost per foot."

CHRISTENSEN DIAMOND
PRODUCTS

MAIN OFFICE AND PLANT 1937 SOUTH 2nd WEST

ABSTRACTS

In This Issue: The following abstracts of papers in this issue are reproduced for the convenience of members who wish to maintain a reference card file and for the use of librarians and abstracting services. At the end of each abstract is given the proper permanent reference to the paper for bibliography purposes.

Anaconda Undertakes Development Program—A look at Anaconda's new development program, which is designed to permit both deeper and more widespread selective mining in the Butte area. The program calls for additional shaft-sinking, reactivating closed mines, and establishing new haulageways and centralized hoisting facilities. It is the largest planned development since the Greater Butte Project was started in 1947. Ref.: (MINING ENGINEERING, July 1960) p. 671.
Beneficiation of Aggregates by Heavy Media Separation by Donald W. Jenkinson—This article is a brief report on the growth of the relatively new application of gravity concentration by the cement aggregate industry. By using heavy media separation, the industry has been able to upgrade many deposits which heretofore have been unacceptable for use. Ref.: (MINING ENGINEERING, July 1960) AIME Trans., 1960, vol. 217, p. 672.
New Man-Cars at Idris by F. S. Hurley, Jr.—This article describes the design and construction of special man-cars built by the management of the New Idris mine to comply with the California Mine Safety Orders pertaining to transportation of mine workers over mine railroads. These cars measure 10 ft long, 44 in. wide, and 50 in. high and are designed to carry up to 12 men each. Ref.: (MINING ENGINEERING, July 1960) p. 673.

Laboratory Equipment

4"x 6" Massco
Laboratory Jaw
Crusher

Welded steel frame; manganese steel jaw and cheek plates; bronze bushed bearings; smooth jaws give better product and easier cleaning. Adjust for plate wear and product size by convenient hand wheel adjustment.

6" and 10" Massco
Gy-Roll Reduction
Crusher

Reduces 1/2" feed to as fine as 10 mesh in single pass. High capacity, low power consumption.

Laboratory
Crushing Rolls

Sizes (Diameter x width): 8"x 4", 10"x 6", 10"x 8", 12"x 10" and 12"x 12". Adjustable roll space setting up to 3/4". Double V-belt drive. Heavy, cast Meehanite frame absorbs vibration, results in long life.

Massco-McCool
Pulverizers

Disc type grinder with a planetary movement. No gears. Will grind 1/4" to 150 mesh in one pass.

Marcy Pulp
Density Scale

Gives direct reading of weight; specific gravity of liquids, pulps, and dry solids; percent solids in pulp. Very accurate. Easy to clean.

Now "trade" dead weight for payload..and haul 40% faster!

Heap-load the big-target Payhauler body in minimum time. Strong rock-ribbed corrugations absorb shock—resist wear and distortion. Choose the "95" with power-shift Torque-Converter, or 9-speed air-shift transmission.

New strength-multiplying corrugated body design results in payload-gaining weight reduction of both International Payhauler models. New "95" capacity is increased to 27 tons—and the new "65" becomes the only 19-tonner on the market!

Look at those exclusive, rock-ribbed body corrugations! International applies this strength-multiplying principle to reduce Payhauler® body weight by an amazing 30%! You "trade" $2\frac{1}{2}$ tons of power-wasting dead weight for 3 bonus tons of payload capacity in the new 95 Payhauler!

New high-torque, high-output diesel power high-balls 27-ton payloads up to 40% faster than the former "95" could haul only 24 tons! The new 375 hp DT-817 International diesel engine gives the new 95 Payhauler the wallop of 40 extra turbocharged "horses."

Prove to yourself that top load-carrying capacity plus top power-to-weight ratio give 95 Payhaulers tremendous profit-earning advantages. Add up other big Payhauler exclusives: fast reverse, up to 7.1 mph. for spotting speed; big-target bodies for loading zip; 11-second inverted-hoist dumping; load speeding safety of torqmatic braking and positive power-steering! Let your International Construction Equipment Distributor demonstrate!

MANUFACTURERS NEWS

NEWS / EQUIPMENT / CATALOGS

Mine Truck

Model KD-5A ore carrier from Getman Bros. features automatic transmission with three speeds in both forward and reverse, air brakes, heavy-duty mine cushion tires, plus hydraulic power steering and hy-

draulic controlled dump body. Having a carrying capacity of 12 to 15 tons and a 115-hp engine, the truck is equipped with exhaust gas filtering and diffusion system for underground mining. **Circle No. 1.**

Explosive Tester

Explosive igniters, detonators, primers, or squibs may be checked quickly and safely by a pocket-sized tester developed by Kinetics Corp. Weighing less than 1 lb, the battery-operated unit will indicate whether an explosive device will operate properly or misfire. Maximum test current is limited to 10 ma, thus prohibiting any danger of accidental explosion during the test. The tester is a rugged, sealed unit which is reported to withstand rough treatment in the field. **Circle No. 2.**

Front End Loader

Caterpillar Tractor Co. has announced the availability of the Caterpillar 966 Traxcavator, a 140-hp unit with a standard 2 $\frac{3}{4}$ -cu yd bucket. Featuring an open cockpit for easy accessibility, the unit has a maximum lift height of 154 in. with

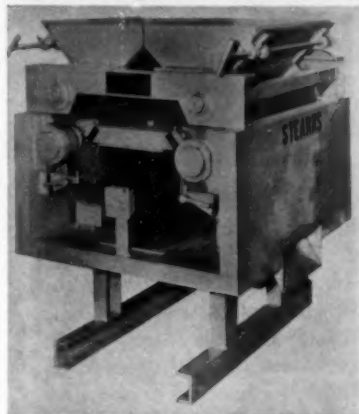

a reach of 35 $\frac{1}{2}$ in. at that height, a 24,000-lb breakout force, and four operating speeds. In addition, the machine has a 205-hp turbocharged diesel engine and three separate sets of brakes. **Circle No. 3.**

A-N Blasting Primer-Initiator

A primer has been introduced by Chromalloy Corp., to replace dynamite as initiating force of A-N blasting. Model 151 Saf-T-Boost Initiator, weighing 13 oz and contained in a 3-in. diam cardboard box, requires no tying, splicing, or taping and is suitable for decking, stemming, or any other blasting technique. It is reported to withstand the roughest treatment without detonating, yet when fired, it can generate a detonation velocity exceeding 20,000 fps. In addition to being cheaper and safer than other primers, it is not troubled by hypersensitivity at freezing temperatures. **Circle No. 4.**

Magnetic Separator

Type KT single-roll induced magnetic separators are being produced by Stearns Magnetic Products. Each unit features a high-field intensity for low-cost cleaning and/or separating of fine-particle material. For

many applications, single-roll separators are reported to be equal in performance to conventional multiple-roll models but less expensive to purchase and operate. The units are recommended for particle sizes of 10 to 200 mesh and are available in roll widths of 10 in., 20 in., and 30 in. in either single or twin (common-coil) styles. **Circle No. 5.**

Pocket Radio

General Electric Co. is now marketing an all-transistorized pocket-size personal radio communications receiver. Termed the "Voice Director," the 12-oz unit is designed for indoor and outdoor use. It permits key personnel to be contacted instantly by a base station transmitter, a two-way car radio, or by a portable unit operating on the same frequency. **Circle No. 6.**

Bench Drill

Atlas Copco has designed the BMP-31 "bencher," a self-standing, air-operated unit for small-scale projects or hard-to-reach work areas. Also usable for shaft-sinking, it is

reported to drill faster and at lower cost than hand-held machines. Designed for 5-ft steel changes, the units mount heavy-duty, high-capacity rock drills. Two units can be operated simultaneously by one man. **Circle No. 7.**

Disposable Drill Bits

For dustless vacuum-type drills, Western Rock Bit Mfg. Co. has developed two types of "one use" bits. Type TCVA or TCVB, a shallow tungsten-carbide insert bit for low-cost footage, fits either class A or class B taper connections and needs no resharpener. Type SLVA or SLVB bit is an inexpensive steel bit which is used until worn out. It features a wing design and a pilot construction which chips the rock ahead of the cross wings and eliminates the pulverizing action common to conventional cross bits. Both types are of 5-hole design and are interchangeable. **Circle No. 8.**

Vibratory Feeder

For handling materials in a wide range of particle sizes, Eriez Mfg. Co. has developed a heavy-duty vibra-

tory feeder, designated Model 75A. Having a rated output of 75 tph at normal operating level, the unit is powered by an electropermanent

(Continued on page 644)

CALUMET NI-HARD* GRINDING BALLS

... Stand the Day-After-Day Grind

**75%
BETTER**

In wet or dry grinding, Calumet Ni-Hard grinding balls offer maximum wear resistance. For instance, in exhaustive tests made in wet grinding of copper ore, they offered 75% greater wear-resistance than any other type of ball. For dry grinding, the wear life proved to be 4 to 1 better than that of forged steel balls.

Calumet Ni-Hard grinding balls have been thoroughly job-tested not only in Calumet and Hecla operations but in the mills of a number of other leading concerns throughout the country. The results invariably have been shown in greater efficiency and lower costs—benefits that can also be yours once you have used Calumet Ni-Hard grinding balls in your own mills.

A complete range of sizes is available to you: $\frac{5}{8}$ ", $\frac{3}{4}$ ", $\frac{7}{8}$ ", 1", $1\frac{1}{4}$ ", $1\frac{1}{2}$ " and 2". Let us send you complete information. Write TODAY.

Manufacturers News

(Continued from page 643)

magnetic a-c drive system. Five standard size trays of flat and tubular designs are available in mild or stainless steel. Special sizes can also be furnished upon request. Circle No. 9.

Chain Flight Conveyors

Columbus McKinnon Chain Corp. has introduced two chain flight conveyors operable in seams down to 30-in. thickness. Called "Ratio-Feeders," the machines load belt conveyors at a controlled rate while speeding up shuttle car operation

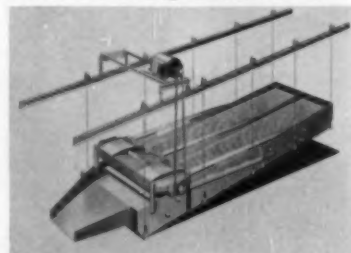

and preventing belt overloading, spillage, and damage. Designated the RF-40 series, the units are of 24-in. and 30-in. height with $2\frac{1}{4}$ to $3\frac{1}{2}$ -ton capacities. Featuring more accessible controls and refined output adjustment, the machines are available as permissible equipment with either a-c or d-c components. Circle No. 10.

Quarry Chain

Reported to possess superior abrasion resistance and greater strength than regular alloy quarry chains, the improved high-strength Accoloy quarry chain from American Chain & Cable Co. has been designed to meet the greater demands of quarries and mines which use $\frac{3}{4}$ to $1\frac{1}{4}$ -in. chains for digging and hauling of rock. By placing the weld at the end of the link, side bend properties have been increased to allow for sharp bends over stone edges. Circle No. 11.

Shaker Screen

Fairmont Machinery Co. has designed a screen featuring a more compact design plus increased operational capacity. Suspended from wire ropes to prevent reciprocating forces from being transferred to the

structure, the unit is furnished with adjustable stoke and speed ranging from $\frac{1}{2}$ in. at 1000 rpm to 5 in. at 165 rpm. Power is supplied to the unit by a 3-phase induction motor. Circle No. 12.

(21) DRY PROCESSING CATALOG: Sturtevant Mill Co. has issued an 8-page catalog describing its full line of dry processing equipment which includes separators, blenders, mixers, grinders, and other crushing and milling machines.

(22) CRUSHER: The Pennsylvania Crusher Div. of Bath Iron Works Corp., has issued bulletin 2020 describing the Hercules Single Roll Crusher. The Hercules is designed for heavy duty primary or secondary crushing of such materials as cement rock, gypsum, mine refuse, muddy materials, limestone, ores, shale, slag, etc. The bulletin uses photographs and engineering drawings in describing the features, operation, application, and capacities of the crusher.

(23) DRILL STEELS: Thor Power Tool Co. has published an 8-page illustrated brochure entitled "Drilling Rock With Coupled Steels". The brochure details proper operational and maintenance procedures and discusses correct rotation, drill, and feed control operations. Information pertaining to starting a hole, the proper feed, drilling and lubrication practices, adding and removing steels, bit maintenance, and dust control is also included.

(24) BIT GRINDERS: Three types of bit grinders that perform custom grinding at the job site are now available from Gardner-Denver Co. Described in bulletin 6-611, the portable, bench, or pedestal-type grinders will sharpen any detachable bit up to 12 in. diam. Fourteen design features are listed as well as grinder size specifications.

(25) EQUIPMENT CATALOG: Catalog 605, a 68-page condensed booklet from Syntron Co. presents descriptions, data, and specifications, on all Syntron products including vibrators, car shakers, car rappers, hopper level switches, conveyors, spiral elevators, and vibrating screens.

FREE LITERATURE

(26) VALVES: The Galigher Co. details its "Delta" valve in bulletin DV-059. Designed especially for handling abrasives in suspension as well as acids and other corrosive materials, the valves are actuated by either compressed air or liquid. The brochure includes engineering specifications, cut-away diagrams, and drawings of typical actuating methods.

(27) MOLYBDENITE FLOWSHEET: Bulletin M7-F66 issued by Denver Equipment Co. is a flowsheet study of the flotation of molybdenite from copper. The bulletin illustrates the molybdenite section of a copper mill starting with the copper rougher flotation concentrate, through the conditioning and flotation sections, to the multiple cleaning stage which produces a 90 pct MoS₂ concentrate.

(28) VIBRATING CONVEYORS: Jeffrey Mfg. Co. has issued an interesting, well-illustrated catalog (No. 954) of mechanical vibrating conveyors. Complete with photos, charts, and engineering drawings, the 68-page manual details the features and construction of all conveyors of this type which are presently available from the company.

(29) QUARRY DRILL: Gardner-Denver Co. has published bulletin 6-666 describing its Mole-Drill model AM5A. This down-the-hole drill has a rugged 5-in. diam and is 41 in. long with bit attached. It is designed for heavy-duty use in quarry operations as well as in construction projects. Positive hole cleaning is assured by air passing through the air tube to the bit and by additional exhaust vents in the drill.

(30) MAGNETIC PULLEYS: Eriez Mfg. Co. has issued a 6-page leaflet describing its complete line of Erium-powered permanent magnetic pulleys. Photographs and tables are provided as guides to selection, capacities, and dimensions. The pulleys are available in two designs, four magnetic strengths, eight diameters, and 14 standard belt widths.

(31) GRINDING MILL GEAR DRIVE: A compact space-saving drive arrangement for grinding mills has been devised by Allis-Chalmers. Termed "Twinducer" and described in leaflet No. 07B9607, the drive unit occupies 50 pct less space than conventional gear box drives. The Twinducer harnesses the power of two synchronous motors located on the mill side of the drive. Once the electrical load is distributed and balanced, no further adjustment is needed nor are floating gear or pinions required.

(32) EARTH MOVERS FOR MINING: "Successful Mining", an 8-page two-color booklet from Caterpillar Tractor Co. discusses a variety of profitable mine techniques and operations employing scrapers, rippers, front-end loaders, and bulldozers. Examples are given of such practices from mine sites in the U. S., Canada, and Southern Rhodesia.

(33) MAGNETIC SEPARATOR: A low intensity magnetic separator or scalper, based on the rotating field principle and designed for laboratory use, is fully described in bulletin RFB-102 from Carpc Co. Design features, applications, and principle of operation are supplied. The unit has a head feed capacity up to 600 lbs per hour and an unusual system of curtain feeding and flux adjustment to give differential low intensity separations. The separator is also adaptable for production control and flow sheet development.

Students should write direct to manufacturer.

(34) SCREW CONVEYOR DRIVE: Bulletin 7106 from *The Falk Corp.* describes their new line of screw conveyor drives. The 20-page booklet discusses such subjects as design features accessories, and technical data including selection and dimension information, NEMA motor dimensions, and nominal sheave ratios for typical unit ratios and speeds.

(35) EQUIPMENT STEAM CLEANERS: If cleaning heavy equipment at the mine or mill site is a problem, request a 12-page catalog recently issued by *Malsbary Mfg. Co.* The booklet pictures and describes three types of steam cleaning machines: fireless steam cleaners, self-contained steam cleaners, and hydraulic pressure combination cleaning systems. Specifications are provided for each model. Tricycle, trailer, and stationary mountings which are available for most models of steam cleaners are also shown.

(36) AIR FILTER: *Union Carbide Corp.* offers a 4-page illustrated bulletin on its new ULOK Cube Type Replacement Air Filter. ULOK Filter Bulletin B tells how cube filters can reduce filter bank face area by more than 50 pct. The physical process of reverse loading, primarily responsible for the high efficiency and long life of the ULOK filter unit, is described in detail.

(37) TRACTOR BLADES: "Best by Job Test", a 12-page illustrated booklet from *Caterpillar Tractor Co.*, reports how cutting edge costs of tractor blades can be reduced. The brochure features reports on the use of various types of cutting edges in material ranging from rock and gravel to highly abrasive sand. The benefits of well-designed induction-hardened edges are demonstrated in terms of less down time and longer life. Features and benefits of multi-section dozer and scraper edges are also cited.

(38) DUST SEPARATORS: Bulletin D-20 released by *The Day Co.* gives details of its Dual-Clone dust separators. The 8-page brochure includes performance data, installation photos, selection and dimension charts for Dual-Clones and Dual-Clones Supports. Dual-Clones utilize the basic principles of dust separation by cyclonic action plus internal skimmers to produce a two-stage separation within the dust collector.

(39) VARIABLE SPEED DRIVES: "Type RS P.I.V. Variable Speed Drives", 6-page folder No. 2874, describes *Link-Belt Co.'s* new constant horsepower variable speed drives designed to meet capacity demands up to 50 hp and ratios up to 5½:1. A twin-strand single roll chain that operates between a pair of smooth facing wheels changes the ratio and output shaft speed to permit stepless speed adjustments between maximum and minimum settings. Applications for the new drives include smooth, precise speed control for timing processes required in drying and heat treatments, for mixing, for synchronizing, and for conveying and handling systems.

(40) CARBIDE BITS: *Gardner-Denver Co.* is offering bulletin 6-6HH which describes its tungsten carbide insert bits developed to give maximum efficiency with the Mole-Drill (see item 29). The new combination alloy achieves optimum results with inexpensive blasting agents and trims drilling costs, regardless of the hardness and abrasiveness of encountered rock. Bit size ranges from 4¼-in. to 8-in. diam.

(41) MOTORS: *The Louis Allis Co.* has recently introduced tube-cooled air-to-air heat exchanger motors which are described in bulletin 2400. The units range up to 2000 hp, are built in standard and in explosion-proof construction, and are protected against excessive moisture, dust, sand, dirt, and metallic particles.

(42) CRAWLER-TRACTOR: A comprehensive 32-page book recently published by *The Eimco Corp.* gives full specifications on the tractor, bulldozer, and front-end loaders that compose the Eimco 103 crawler-tractor line. Profusely illustrated, the bulletin includes schematic drawings and coded listing of performance of the equipment. Ask for bulletin L-1097.

(43) AIR COMPRESSORS: *Allis-Chalmers Mfg. Co.* has issued a comprehensive catalog covering the performance and engineering data on its scroll casting design single-stage centrifugal compressors for air applications. The loose-leaf catalog includes formulas for sizing the firm's B, C, and D style units, dimensional data and prices, and 123 performance curves. Copies are obtainable by direct request on your company letterhead from *Allis-Chalmers, Milwaukee 1, Wis.*

(44) MOTOR CATALOG: A very comprehensive motor catalog has been issued by *Sterling Electric Motors Corp.* This illustrated 56-page catalog describes a-c multi-shielded motors and provides complete pricing and dimensional data. Information is also included for various modifications such as specialized mountings and enclosures.

(45) THROTTLE VALVES: Bulletin 460 from *Hose Accessories Co.* illustrates and describes the line of LE-HI Series 2500 throttle valves for the safe control of compressed air on pneumatic operating equipment in mining, quarrying, construction, and general industry applications.

(46) POWER SHOVEL: A 20-page catalog from *The Thew Shovel Co.* describes the ¾ yd crawler-mounted Lorain model 26. The booklet gives details of the machines construction and job applications for use as shovel, crane, clamshell, dragline, hoe, and other uses.

half
the success
is knowing
where
to begin!

Your plant has characteristics all its own: process, material-handling, labor, economics, climate. Experience of the proper kind will put you far ahead by telling you which way to reach your plant objectives—most directly and economically. Walvoord can suggest an approach that will make good sense and will include every phase from initial planning to plant start-up. Consultation—the first step in solving your problem—is available upon request.

O. W. WALVOORD, Inc.

301 DETROIT ST. • DENVER, COLORADO

CONSULTATION / DESIGN / CONSTRUCTION FOR INDUSTRY

KREBS CYCLONE

...the most effective classifier
for a wide range of applications

- ✓ LOW INITIAL COST ✓ REDUCED MAINTENANCE
- ✓ GREATER RUNNING TIME (No grind-out required)
- ✓ METALLURGICAL GAINS OFTEN OF MAJOR CONSIDERATION

PREFERRED by a rapidly expanding number of large operations for:

- CLOSED-CIRCUIT CLASSIFICATION IN PRIMARY MILLS.
- SECONDARY MILLING CIRCUITS.
- CONCENTRATE REGRIND CIRCUITS.
- PRECISION DE-SLIMING.
- MINE FILL FROM TAILINGS. Quick set, good percolation for faster mining operations.
- BERM PREPARATION FOR TAILINGS DAM.
- ADJUNCT TO FILTER FEEDS. Protects thickener from overloads of coarser fractions.
- DESANDING MINE WATER. Reduces pumping maintenance substantially.
- OTHER SPECIAL APPLICATIONS.

EQUIPMENT ENGINEERS INC. HAS DEVOTED ITS ENTIRE EFFORTS for over 11 years to the design and manufacture of cyclones adapted to individual plant operations.

THE PILOT PLANT AT PALO ALTO is equipped for full-scale testing programs. Results are correlated with a large tabulation of data from other tests and subsequent installations and accurate performances are predicted. This work often leads to economies and metallurgical gains.

THESE FACILITIES ARE AVAILABLE TO YOU for the study of your classification problems. Inquiries invited.

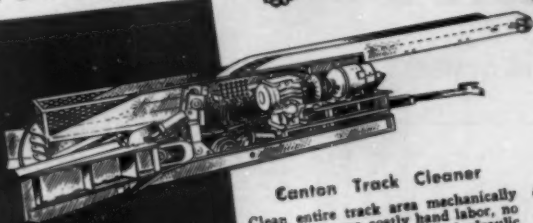

EQUIPMENT ENGINEERS, INC.

737 LOMA VERDE AVENUE • PALO ALTO, CALIFORNIA

"Canton"
... Gives you

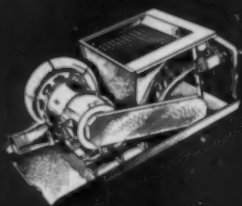

key to the money vault!

Help yourself to unlimited profits with equipment that opens up new areas of increased savings ... performs prodigiously over long, long periods of time, pays for itself in unbelievably short time.

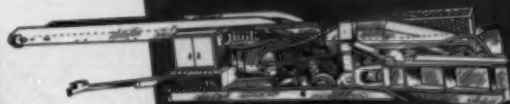

Canton Track Cleaner

Clean entire track area mechanically in one pass—no costly hand labor, no dozers or loaders required—hydraulic dozers or loaders throughout. "Pays for itself in one sweep through mine." Now used in coal, iron, copper, lead, potash, and salt mines.

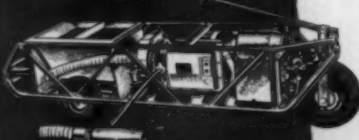

Mighty Midget Duster

Weights only 280 lbs. Easily moved on shuttle car. Hand cart available. Ideal for small mines—inexpensive—capacity 7 tons dust per shift.

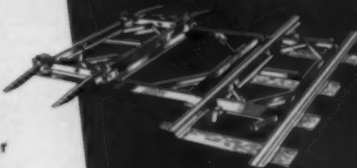

Dustmaster

The track mounted Hi-pressure "Dustmaster" is the most powerful Duster ever built. Distributes dust to back areas 500 feet from haulway.

Little Chief for Wet Or Dry Dusting

Rubber tire model 22½" high—skid model 18½" for shuttle buggies, belts or mine cars; hydraulic self-propelled model available. 34 to 60 lbs. dust per minute through 50 to 250 ft. of 2" hose.

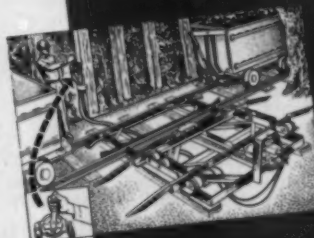

Manually Operated Car Transfer

No alterations to track—quickly installed and relocated—less rib to shoot than for jump switch—no hazards of cherry picker, anti-friction bearings for easy hand operation.

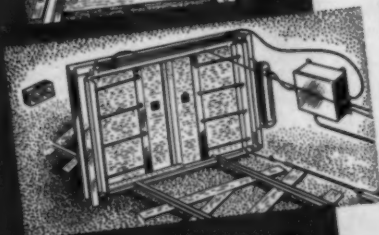

Air Power Car Transfer

One man does the work of three and faster. Entire train loaded out on a single track. Expedites servicing cars to mucking machine.

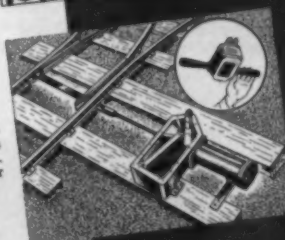

Canton Automatic Mine Doors

The Automatic Door operates mechanically by weight of car on activating levers. Air power operation may be had where desirable. Operates at any trip speed. Two doors provide air lock.

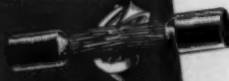

Track Switch Thrower

Either electric or air operated. Route selections made by motor-man at full trip speeds. Eliminates accident potential and extra man. Also ideal as Derailer. Manual or automatic contactors available.

Canton Cable Splicers

Reduce down-time in splicing cable. Machine man should carry a pocketful. Just pound around cable and keep on working. No special tools required.

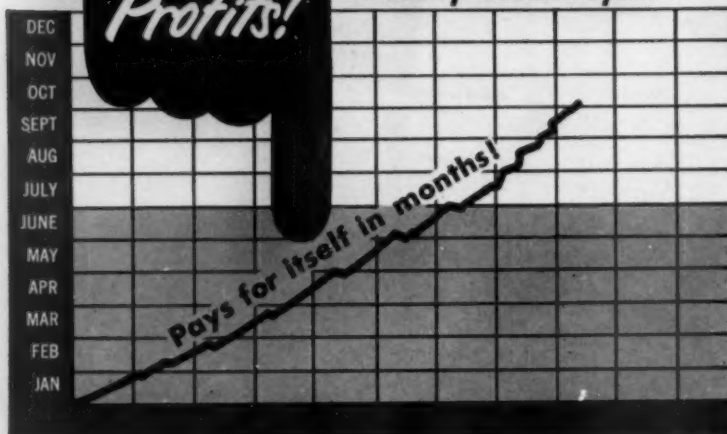

... you can install a "Canton" now and pay us out of ... complete brochures. Please use street and zone ...

WEBER AVENUE, S.W. CANTON, OHIO

**Earns
Real
Profits!**

ohmart

NUCLEAR Density Control System

It's a fact! Ohmart Density Control Systems usually pay for themselves within six months and less, according to customer reports from many industries. One processor states that his Ohmart installation pays off its cost twice each week of operation.

If in your processing you use evaporators, spray dryers, drum dryers, classifiers, kilns . . . any equipment where liquid or slurry density or concentration is important . . . you can profit with Ohmart. Its performance is guaranteed!

Here's how an automatic, accurate and continuous Ohmart installation can earn real profits for you:

1. Ups production . . . cuts variable and capital costs.
2. Maintains more uniform and better product . . . more output from same input.
3. Eliminates costly and inaccurate manual sampling . . . saves manpower.

Ohmart makes the most complete standard line of nuclear gaging equipment for controlling the density variable in liquids or slurries, level measurement, and interface detection. There are more Ohmart Nuclear Process Control Systems in operation than all others combined.

For Ohmart profit-earning details, write for Bulletin 105-C.

ORE PREPARATION applications for Ohmart Nuclear Density Control

A Typical Raw Mill Control System
Ohmart Model SG gage measures percent moisture of slurry as it passes through line. Density changes sensed by the gage cause control valve actuation through recorder/controller.

Some typical applications of Ohmart Control Systems

Control of—
Leach Tank Density
Thickener Underflow Density
Heavy Media Density
Influent Slurry Density
Kiln Feed
Rod Mill and Ball Mill Density
Centrifuge Feed Density
Filter Feed Density
Continuous Weighing

ABSTRACTS

Continued from
page 641

Water Controlling Factor of Copper Production by S. D. Michaelson, B. H. Swign, S. J. Hubbard, and A. W. Lutz—The copper industry, which must depend on an adequate water supply if it is to grow, faces the problem of being caught in its environment. About 90 pct of the country's primary copper is produced in the semi-arid region of the West and Southwest. Competition for use of the limited water supply is keen. The authors summarize the problem and suggest solutions. Ref.: (MINING ENGINEERING, July 1960) AIME Trans., 1960, vol. 217, p. 674. . .
Bureau of Mines Completes Organization for Mine Research by Paul T. Alliman—The U.S. Bureau of Mines recently completed organizational changes that, for the first time since the beginning of World War II, re-emphasize mining research as an important part of its responsibilities. The article gives a progress report on the Bureau's improved program for mining research. Ref.: (MINING ENGINEERING, July 1960) AIME Trans., 1960, vol. 217, p. 675.

Silver in a Time of Change by Edward Sampson—Consumption of silver both for monetary and industrial use in the Free World at present exceeds production. The consequences this state of affairs will produce in the future, as well as possible remedies, are considered in this article. A very brief background on the history of the industry is also provided. Ref.: (MINING ENGINEERING, July 1960) AIME Trans., 1960, vol. 217, p. 676.

A Special Report on The International Mineral Processing Congress by H. R. Spedden—As official AIME representative at this Congress held in London, the author reviews the highlights of the technical program. The report contains abstracts of the most important papers and, where pertinent, evaluates these papers. Ref.: (MINING ENGINEERING, July 1960) p. 677.

SME Meeting Papers: The following abstracts of papers presented at SME meetings are given for your information. Preprints of these papers are not available.

An Appraisal of Industrial Minerals of the Pacific Northwest by Richard M. Foote—Industrial minerals represent an important segment in the economy of the Pacific Northwest. During the recent past, the growth pattern of most industrial minerals in the Pacific Northwest has been one of increasing demand. This demand bears a strong relationship to the steadily increasing population and industrial growth, accompanied by a rising standard of living which, in turn, has stimulated new and increasing demands for industrial minerals. Every evidence indicates this demand for industrial minerals in the Pacific Northwest will continue to grow in the future if the economy of our nation remains sound. Assuming a sound economy and a peaceful world environment for the near future, an appraisal of the possibilities of developing the various industrial minerals found in the Pacific Northwest is made. The need for further evaluation of presently known occurrences along with research on the problems of exploration, mining, beneficiation, development of new uses, and marketing of these minerals are also evaluated. AIME-ASM Pacific Northwest Metals and Minerals Conference, Portland, Ore., April 1960.

The Inorganic Chemistry of Boron by George W. Campbell, Jr.—Boron is one of the most versatile of the elements, comparing favorably with, and in many respects even exceeding the versatility of carbon. The chemistry of boron is determined by the structure of the boron atom in which there are three electrons in the valence shell. Hence, in a "normal boron compound", boron forms three covalent bonds in a planar, trigonal configuration. The fourth orbital (or bonding position) of boron is capable of forming a coordinate covalent linkage with an atom or group of atoms which can contribute a share of an electron pair (Lewis acid-base neutralization). It is this Lewis-acid character of "normal boron compounds" which dominates the chemistry of boron. Thus the boron halides, which are the simplest compounds of boron, are strong acids, and boron fluoride has found extensive use as an acid-type catalyst. Boric oxide is

(Continued on page 666)

REALLY SHARP ON TURNS

The all-hydraulic, 20-ton capacity TR-260 makes U turns in less than 26½ ft . . . saves up to 15 seconds per cycle over conventional haulers.

The 230-hp Allis-Chalmers TR-260 turns in less space than any wagon of comparable size. Complete U turns are made in less than 26½ ft. All-hydraulic, 2-stage steering with double-acting steering jacks gives you 2-way power pulling out of full turns. At the shovel and hopper, this kind of turning can save you up to 15 seconds per cycle over conventional haulers.

In addition, the sharp-turning TR-260 also gives you the benefits of *KON-TORK* differential and plenty of tractor and wagon underclearance to keep you on-the-go.

These are just a few reasons why the 20-ton capacity TR-260 brings you extra profits on your hauling

jobs. Your Allis-Chalmers dealer will give you all the facts on both the TR-260 and the 12-ton capacity TR-160. Allis-Chalmers, Construction Machinery Division, Milwaukee 1, Wisconsin.

You get double value and lower basic equipment investment when you use the 9.5-cu-yd TS-160 and 17-cu-yd TS-260, the 12-ton TR-160 and 20-ton TR-260 units. Both can be interchanged . . . together they eliminate need for specialized equipment.

KON-TORK is an Allis-Chalmers trademark.

NI-HARD mill liners

...good to the last 1/4"

Original liner 3 1/4" minimum thickness. Worn to 1/4" before replacement. No breaking.

No cracking. Outlasted unalloyed white iron 2.15 to 1 and manganese steel 1.46 to 1

MILL LINER MINIMUM THICKNESSES

If you are unacquainted with Ni-Hard* mill liner segments, the table below will give you a rough guide to the minimum thicknesses for an initial installation. Thinner liners than these can and are being used based on individual experience, but the thicknesses contained in the chart are suggested as a starting point for the mill man who is thinking about using Ni-Hard liners for the first time.

MINIMUM MILL LINER THICKNESS

MILL DIAMETER	SIZE OF GRINDING BALLS OR RODS			
	1"	2"	3"	4"
6	1.5"	2.0"	2.5"	3.0"
8	1.75	2.25	2.75	3.25
10	2.0	2.5	3.0	3.5

"Ni-Hard mill liner segments are available from authorized producers throughout the country. For the address of the one nearest you, write to Inco."

Chile Asks Greater Investment by Copper Companies

The severe earthquakes which inflicted heavy damage in Chile have prompted President Jorge Alessandri to ask his country's major copper producers to increase their investment by \$250 million in the next four years. In addition, the President has asked an increase of \$40 million a year in copper production—a total which, at the present copper price of 32¢ per lb, would mean producing an additional 125 million lb a year. Both Anaconda Co. and Kennecott Copper Corp. are negotiating with Chile over possible investments exceeding \$250 million—with decisions pending Chilean guarantees on taxes and other financial factors. Anaconda is considering multi-million dollar expansions at its El Salvador and Chuquicamata mines and the construction of a refinery at Chañaral, and Kennecott is planning to spend some \$200 million to boost output at its Braden mine by 100,000 tons a year.

Alcoa Acquires Jamaica Bauxite Option

An option on mining rights blanketing 30,000 acres of prospective bauxite property in Clarendon Parish, Jamaica, has been acquired by Aluminum Co. of America. Output is slated for June 1963.

Cerro Buys Control of Rio Blanco

Cerro de Pasco Corp. has purchased control of Rio Blanco Copper Corp. Ltd. owner of almost all capital stock of a Chilean company with a large indicated orebody near Santiago. Cerro, which has been exploring the property, reports 120 million tons of ore with average grade of 1.58 pct Cu has been indicated to date. Amenable to block caving, the orebody is estimated to hold the equivalent of 1.9 million tons of refined metal. R. P. Koenig, Cerro president, said a decision to bring the property into production will depend on the outcome of already started negotiations with the Chilean government and satisfactory financing . . . Cerro de Pasco shareholders recently approved a proposal to shorten the name of the company to Cerro Corp. The new title should become effective about the first of next year.

Coal Waste Plant to Produce Aluminum Sulfate

North American Coal Corp. plans to construct a new 40,000-ton per year plant for producing high purity aluminum sulfate from coal mine wastes. To be the first of its kind, the \$1 million plant will employ a process developed jointly by Strategic Materials Corp. and North American. The plant will be located at Powhatan, Ohio, and operating by June 1961.

Copper Output at High in April

Refined copper output jumped to a record high in April. U. S. production was at 153,053 tons and foreign output at 173,538 tons.

Open New Katanga Refinery

Union Minière du Haut Katanga has begun operation at the Luilu copper and cobalt refinery in the Belgian Congo. By early 1961, annual copper output will be stepped up from the present 50,000 long tons to 100,000, and cobalt capacity to 3500 long tons from the present 1750.

Columbia-Geneva to Build New Iron Ore Facility

An iron ore mine and processing plant will be constructed near Lander, Wyo., by the Columbia-Geneva Steel Div. of U. S. Steel Corp. Plans call for the new unit, which will be completed in 1962, to supply pelletized concentrate to the division's Geneva works near Provo, Utah. The facility will have a capacity of 4000 tpd of pellets containing more than 60 pct Fe and will consist of an open pit mine, a crushing and screening section, a concentrating plant, pelletizing plant, water storage and handling system, and loading and shipping facilities.

Warrick Aluminum Smelter Begins Operation

Start-up of the new \$80-million primary aluminum smelter at Warrick, Ind., by Aluminum Co. of America is giving the industry an additional 35,000 tons per year of rated capacity. Only one of five potlines has been completed, pending an increase in market demand for the light metal. The plant's total capacity upon completion will be 175,000 tons annually.

Bigger Load for Projected Copper Slag Plants

Webb & Knapp, Inc. announced that capacities of two steel mills to be erected at Clarksdale, Ariz., and Anaconda, Mont., will each be increased from the originally scheduled 100,000 tons to 350,000 tons. The projected plants are to produce steel by direct reduction from copper slag piles containing about 30 pct Fe.

Active Promotion for Coal Use

S. F. Dunn, president of the National Coal Assn., says his association's proposals to stimulate coal demand include a research program highlighted by plans to construct an \$875,000 laboratory by Bituminous Coal Research, Inc., an affiliate of NCA. With a Federal coal research program also in the making, he said, the industry is "on the threshold of an intense science and engineering effort that can give an upward thrust to coal demand in a relatively short period."

"Safest Mine in North America" . . .

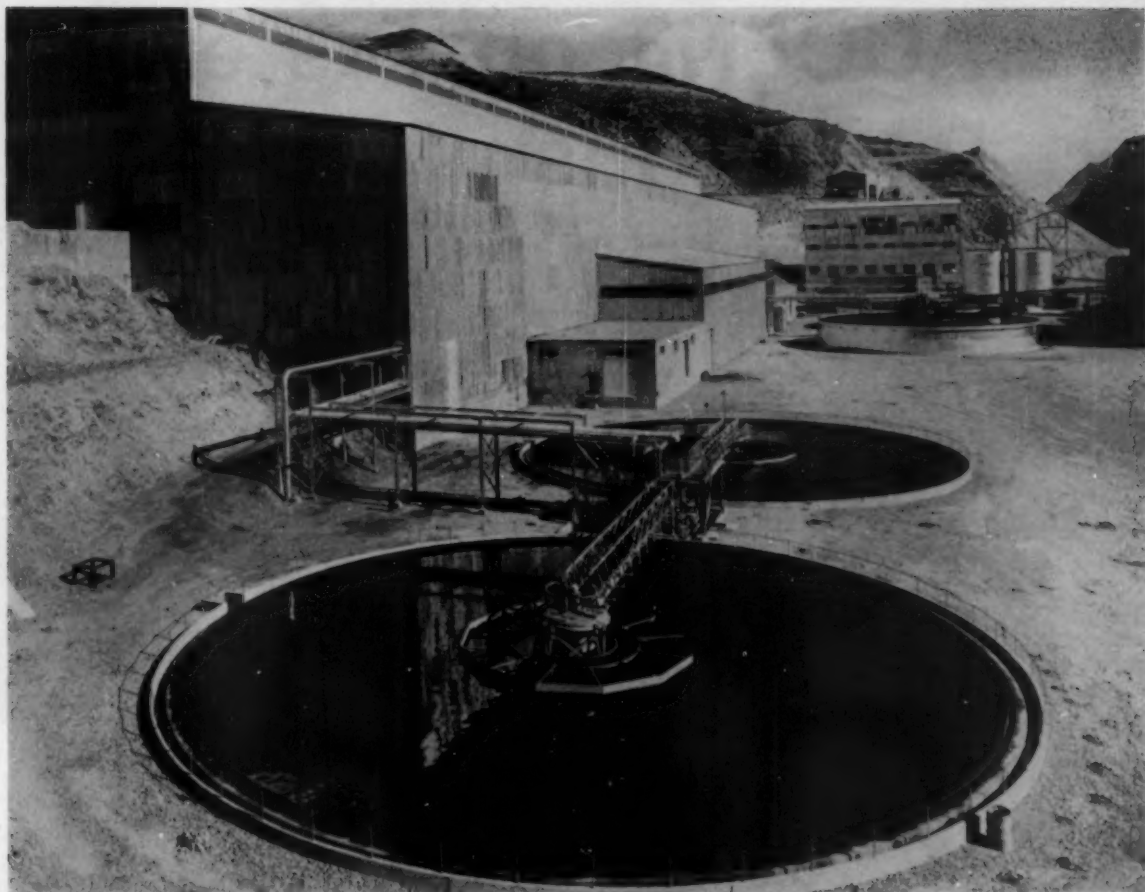

The Jeffrey mine of Canadian Johns-Manville Co. Ltd. in Asbestos, Que., has been given a National Safety Council award of honor. The mine scored the best record for underground nonmetal mining with 2,660,079 injury-free man-hours in the period April 4, 1959, to January 13, 1960.

Kennecott Dedicates Baltimore Refinery

The \$30-million electrolytic copper refinery built by Kennecott Copper Corp. has been officially dedicated. The facility will be operated at its full capacity of 16,500 tons this summer. When the unit goes to full capacity from the present output of 10,000 tons per month, Kennecott will be refining all but 6000 tons of its monthly mine production.

Gilsonite Used for Diesel Fuel

Light-weight mineral gilsonite—a solidified hydrocarbon found in the western U. S.—is being sold by American Gilsonite Co. as a low-cost railroad diesel fuel. The company plans to expand its refinery at Grand Junction, Colo., to meet the anticipated demand.

PROJECT— COPPER

Another Complete Mill-to-Smelter Plant ENGINEERED by STEARNS-ROGER

This smoothly operating project including copper mill, smelter and power plant was designed to process 30,000 tons per day. The engineering performed by Stearns-Roger included designs for concentrator, smelter, heavy density plant, power plant, crushing plant, and specifications for thousands of items of mill and smelter equipment. Engineering of supporting facilities also furnished includes two complete townsites, public buildings, machine and maintenance shops at mine, mill and smelter, transmission lines and lime plant. Stearns-Roger offers reliability in design, engineering, fabrication, field erection and start-up. One-contract engineering services for your chemical or metallurgical plant project are our specialty.

ACCENT on Faster Piping Installation

*Use This
NAYLOR Combination
To Save Work
and
Speed the Job*

For short cuts to long lines, it will pay you to team up NAYLOR Spiralweld pipe and Wedgelock couplings.

The light weight of NAYLOR pipe makes it easy to install—whether you suspend it, support it, string it along the surface, or bury it.

You save even more time when you make connections with the NAYLOR Wedgelock coupling which is designed for faster, easier and more economical installation.

For air, water or tailings service, you'll be time and money ahead to specify this NAYLOR combination.

The NAYLOR Wedgelock coupling makes a positive connection, securely anchored in standard weight grooved ends. A hammer is the only tool needed to connect or disconnect it.

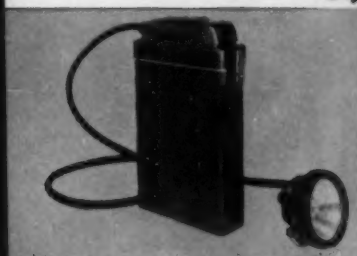

Write for Bulletin No. 59

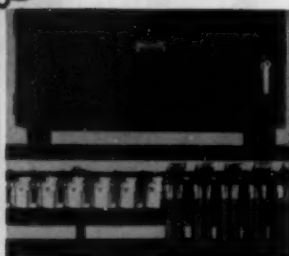

NAYLOR PIPE *Company*

Eastern U. S. and Foreign Sales Office: 60 East 42nd Street, New York 17, N. Y.

☐ **NEW EDISON MODEL S ELECTRIC CAP LAMP** provides greater safety for the miner, higher production for the operator. 15% increase in illumination. Smaller, lighter-weight headpiece. Improved battery.

☐ **M-S-A® AUTOMATIC LOW-VOLTAGE CHARGING SYSTEM** is designed for the most economical method of lamp charging. Miners can put their lamps on charge with one motion and keep moving without any delay.

☐ **M-S-A® PERMISSIBLE MINE LIGHTING SYSTEM** cuts down accidents. Increases production. Provides dependable lighting with an instant start circuit. Available for either 110 or 220 volt AC circuits.

☐ **M-S-A® TRANSISTORIZED AUDIO TONE TRANSMISSION EQUIPMENT** permits economical centralized control and indication of fans, substations, motors, pumps, conveyor belts, switches, circuit breakers, and lights.

☐ **M-S-A® MINEPHONE** coordinates trip traffic for safe, fast, productive haulage control. Motormen have clear, instant voice communication with the dispatcher or other motormen while trips are moving. Installs easily.

☐ **M-S-A® MINER'S FIRST AID CABINET** provides medical dressings and equipment for mine hospital or dressing station. Each unit package individually wrapped in cellophane. When open, lid serves as a work shelf.

☐ **M-S-A® ALL-SERVICE® MASK** with new Window-Cator canister, external check valve and M-S-A Clear-tone Speaking Diaphragm gives dependable breathing protection against smoke, toxic gases and fumes.

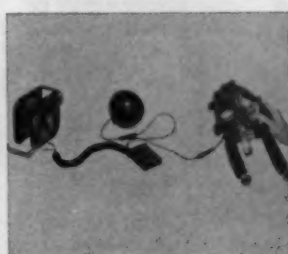

☐ **M-S-A® CHEMOX® BREATHING APPARATUS** completely safeguards breathing while travelling through any gaseous or oxygen deficient area. Generates its own oxygen supply from replaceable canister.

☐ **M-S-A® SELF-RESCUER®** gives immediate breathing protection in emergencies caused by fire or explosion. Compact. Lightweight. Can be stored without deterioration. Available in storage cases or individual carrying cases.

☐ **M-S-A® DUSTFOE RESPIRATOR** is light and compact for dependable protection against dusts, vapors, and mists. Allows maximum vision by the wearer. It's easy to clean. Design is modern and functional.

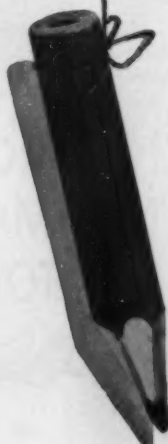

☐ **M-S-A® MINE RESCUE COMMUNICATION SYSTEM** with speaking diaphragm face piece sets up positive "party line" communication between rescue team and fresh air base. Transistorized. Battery-powered.

☐ **M-S-A® TYPE K SKULLGARD® HAT WITH NEW FIXED-CROWN® SUSPENSION** is safest on the outside, safest on the inside. New suspension provides an extra margin of safety which is completely tamper-proof.

THE NEW LE ROI TRAC-NEWMATIC

puts
down
big
4 inch
hole
fast!

Drills at any angle

... on uneven terrain

... straight ahead

... straight down

... or over the tracks

DOWN

DEEP

FOR

MODERN

DRILLING

Here's Le Roi's brand-new, hard-working crawler drill — The Trac-Newmatic.

The Trac-Newmatic carries a big 5-inch drifter on an extra-sturdy air-powered feed shell . . . all mounted on a hard-lugging crawler that can pull a 600 rotary along with it over tough terrain.

The 5-inch drifter features a striking-bar design that efficiently squeezes every ounce of power out of the available air . . . minimizes leakage and blow-by . . . drills 4-inch hole fast. What's more, the drifter has forward, neutral, and reverse rotation to assure fast driving, easy extracting, and speedy steel-uncoupling or coupling.

An air-motor driven hydraulic pump is used to quickly position the feed shell for breast- or lift-hole drilling either straight ahead or over the tracks to give a wide drilling pattern from a single location. A standard model with hand-operated hydraulic pump to raise and lower the boom is also available.

Tramming is easy, too . . . two hefty 7½ hp reversible air motors give the Trac-Newmatic plenty of power, while the oscillating tracks permit tramming or parking even on irregular terrain. Controls are mounted for both convenient operation and good visibility, and a "deadman" feature anchors the unit in place when the tramming levers are released.

See the Trac-Newmatics at your Le Roi distributor—or write us for more detailed information. Le Roi Division, Westinghouse Air Brake Co., Milwaukee 1, Wis.

Cross section of average extension steel, showing distorted center hole.

Cross section of Sandvik Coromant Steel, showing perfectly uniform center hole.

See for yourself why
SANDVIK
Coromant Steels
last longer on the job!

Sandvik-originated smooth rope-threads make uncoupling easy.

BLUE RIBBON
MINING AWARD
1960

The completely unretouched photographs above show clearly why Sandvik Coromant large-diameter extension rods last longer! Since Sandvik takes the time—and the trouble—to cold-roll these alloy drill rods, the flushing hole is uniform all the way through—smooth as a gun barrel. And, since the hole is even and perfectly round, you set up fewer strains and stresses in use...there's less whipping...and therefore, less breakage. And, with mechanically stronger rods, we can provide larger flushing holes for faster, more complete removal of cuttings.

What's more, the Sandvik-originated rope-thread makes coupling and uncoupling a hand operation—speeds the job—and reduces chance of incipient cracks developing from wrench marks.

All in all, you can't beat Sandvik Coromant Rope-Thread Steels for fast work and long life! Available from 1½" to 2" in diameter. To set up a test on **your** job, write to your nearest Atlas Copco office today. Address: Dept. ME-17.

TYPE "B" STATIONARY MOUNTED CARQUAKE
Designed for applications where only slight movement parallel to hopper cars and tracks is required. The unit is mounted to the customer's concrete hopper foundation or steel structure with anchor bolts.

TYPE "C" RAIL MOUNTED CARQUAKE
Mounted on rails permitting travel any desired distance and unloading into any hopper. Concrete piers or steel structure for anchoring rails are all customer need furnish.

**NOW! MINIMUM NOISE WITH MAXIMUM
EFFICIENCY IN UNLOADING HOPPER CARS**
HYDRAULICALLY POWERED

SA CARQUAKE

- One man unloads hopper-bottom railroad cars quickly, efficiently and with less noise than overhead car shakeouts.
- Hydraulically powered vibration with speed controlled to match required capacity.
- No expensive overhead structures needed — a completely self-contained unit—unlimited movement parallel to track.
- Avoids demurrage charges — saves manpower — speeds unloading operations.

MAKES DUST OUT OF MOUNTAINS

Coates Carbex Grinding Balls are made of fine-grained, high-carbon steel. They are especially forged to attain more perfect sphericity, then heat treated to extreme hardness, but with toughness to withstand the *IMPACT* of milling without shattering.

Coates Grinding Balls have been proven "best buys" in actual production run tests, yet Coates conducts a continuing research program to improve its already highly rated product.

Call for Coates Triple-Forged Grinding Balls . . . built with care for longer wear.

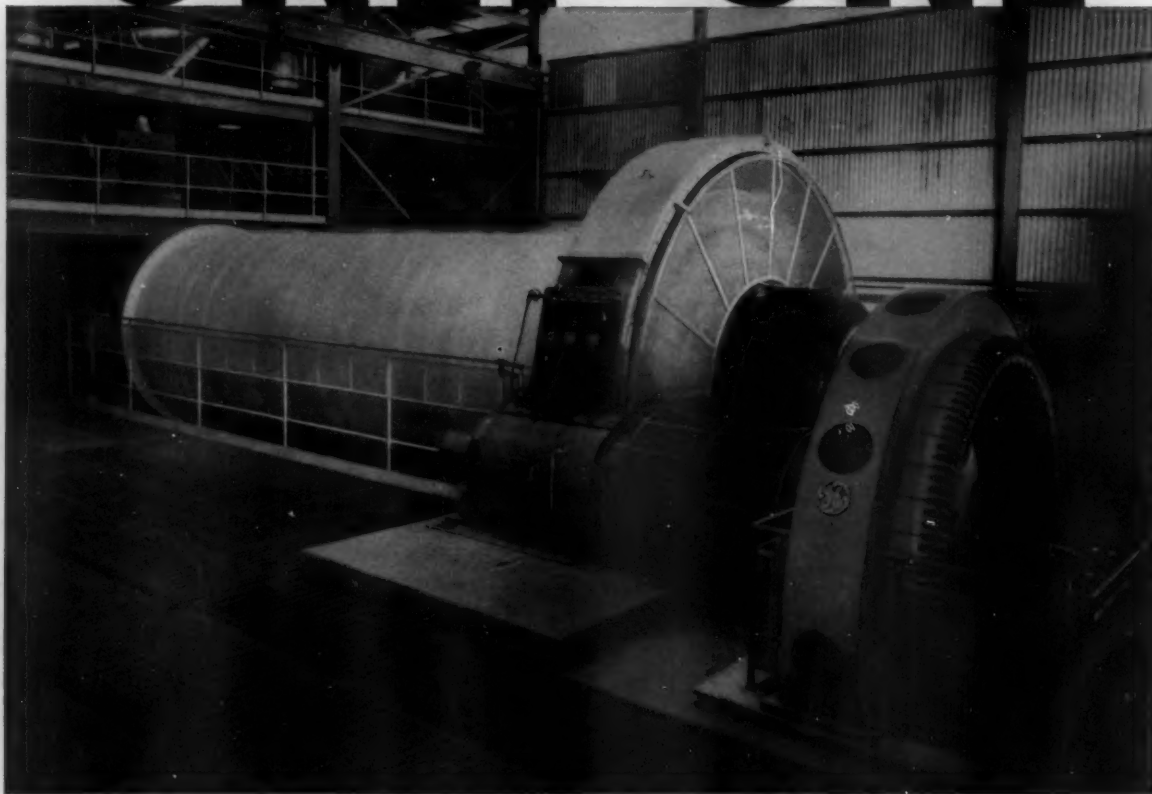

Write for prices . . . All sizes— $\frac{1}{8}$ " to 5" carried in stock for immediate shipment.

STEEL PRODUCTS COMPANY

Solid AEROFLOAT® Promoters... selective, specific and synergistic*

These time-tested Cyanamid flotation promoters are selective, efficient sulfide and precious metal collectors. They are generally more specific and selective in their collecting action than the xanthates. Chemically, the dry AEROFLOAT Promoters are sodium salts of dialkyl dithiophosphoric acids:

where R is the alkyl group.

Products with alkyl chain lengths ranging from ethyl through hexyl groups are available. They are water-soluble dry solids that are essentially non-frothing.

Conjoint use of these AEROFLOAT Promoters with xanthates, 400 Series promoters or liquid AEROFLOAT Promoters sometimes results in a synergistic collecting effect . . . the dual-promoter combination giving better results than equivalent dosages of either promoter alone. Substantial tonnages of copper, zinc, gold and silver ores are being concentrated with AEROFLOAT 208, 211, 226, 238, 242 and 249 Promoters and SODIUM AEROFLOAT Promoter.

Cyanamid field engineers, backed by the services of the well-equipped, well-staffed Cyanamid mining chemicals laboratory, can help you adapt the AEROFLOAT Promoters to your specific flotation problem. In these times of low metal prices, it will pay you to check these Cyanamid Reagents. Contact our nearest office or representative for further information.

*Synergistic—of or relating to synergism, the cooperative action of two discrete agencies such that the total effect is greater than the sum of the two effects taken independently.

to the salt mines...**FOR LIFE**

There's just one reason why Rex-Rated Idlers were sent to the salt mine shown above...International Salt Company knew in advance that these idlers would provide maximum service life under punishing corrosive conditions and continuous heavy loads. Years of service have proved the decision was right. Down time has been kept to a minimum.

The main reason why Rex-Rated Idlers eliminate guesswork and costly selection errors is because the Rex-Rated line is complete with idlers for every application. And every Rex Idler is accurately rated to provide exactly the operating life required under specific operating conditions. A simple selection chart tells you in advance exactly which idler you need and what kind of service to expect before you buy.

The Rex Rating System and the Rex line are the results of years of experience in idler design and testing by Rex Engineers.

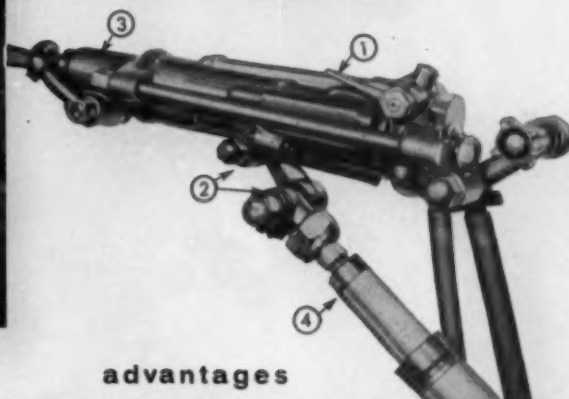

Why risk costly errors? Specify Rex-Rated Idlers. Write CHAIN Belt Company, 4794 W. Greenfield Ave., Milwaukee 1, Wis. In Canada: CHAIN Belt (Canada) Ltd., 1181 Sheppard Ave. East, Toronto.

the *new* JR-38C UNIVERSAL JACKDRILL

New features mean easier setups,
faster drilling - and extra stamina
keeps it underground!

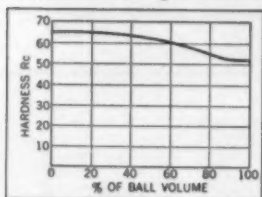

features	advantages
1 5- POSITION THROTTLE	All drilling functions are on one convenient control — blowing, feeding, collaring, drilling. In feeding position, feed-leg pressure is adjusted by a roll-type valve on drill handle.
2 INTEGRAL FEED LEG WITH ADJUSTABLE TENSION & BALANCE	Only one air hose connection needed — air from drill casing passes to the leg through built-in connection. Tension on knee joint and balance of drill on leg both adjustable to suit operator's preference.
3 STOPPER-TYPE FRONTHEAD CONSTRUCTION	Fronthead fits into deep counterbore in cylinder, providing extra strength and rigidity that means longer, trouble-free performance in feed-leg drilling.
4 TELESCOPIC FEED LEG	Telescoping leg extends from 55" to 127" — provides greater feeding pressure on high back holes without auxiliary extensions.
SPOOL TYPE DOUBLE KICKER PORT VALVE	New valve design, using famous I-R double kicker port principle, has larger direct air ports to both sides of piston — <i>increases drilling efficiency 20% or more!</i>
RETRACTABLE AIR FEED	Retracts feed leg quickly by air pressure, saving time in moving from completed hole to new position.
<p>For drifter dependability in a light-weight feed-leg drill, try the new JR-38C. Ask your I-R distributor or engineer for complete information.</p> <p>Ingersoll-Rand 104A5 11 Broadway, New York 4, N.Y.</p>	

A CONSTANT STANDARD OF QUALITY IN EVERYTHING YOU NEED FOR DRILLING ROCK

Immediate delivery on USS Grinding Balls We swing into action immediately when you order USS Grinding Balls. Thus, they are delivered to you when you need them. We can ship promptly from stock that includes a complete range of sizes from $\frac{3}{4}$ " to 4" in USS Carbon-Manganese Steel and USS Alloy Steel. Here are three reasons why USS Grinding Balls are your best buy: **Maximum hardness** combined with superior toughness. **Deeper hardness penetration** achieved by careful combination of heat treatment and composition. **Uniform roundness** from ball to ball, load to load, for less wear and superior performance. If you have a delivery, performance, or selection problem, call our nearest Sales Office or United States Steel, 525 William Penn Place, Pittsburgh 30, Pennsylvania.

X-RAY SENSORS
FOR AUTOMATION

NOW...full-time analysis of materials in actual production

XEG X-Ray Emission Gage watches and measures up to 5 selected elements

Solids, powders, slurries, fluids — General Electric XEG X-Ray Emission Gage examines them as they actually move through production . . . writes a running record of their elemental make-up. XEG tirelessly surveys up to five elements simultaneously, continuously . . . senses both their *presence* and *quantity*. Where practical to operate minus reference, even analyzes a sixth element.

Versatile XEG serves equally well for on-line process control or individual-sample analysis. Scientifically trained operator is not required — because once set for specific analysis, there's little need for further adjustment. XEG then automatically delivers the facts on

composition for rapid-fire, continuous feedback to process control.

Applications are as limitless as your imagination. And, whenever you like, we can explore XEG potentials with you. The details are available now from your G-E x-ray representative. Or write us at General Electric Company, X-Ray Department, Milwaukee 1, Wisconsin, for Pub. ME-74.

an excellent solvent, or flux, for metal oxides because of the acid character of the trigonal BO_3 groups that are present. In glasses and ceramic glazes, boric oxide neutralizes the alkalinity of soda and lime, making possible an extended network structure such as exists in fused silica, yet with a relatively low and broad melting range. The chemistry of the boron hydrides, which is a relatively new field of chemistry is discussed also in relation to the acid character of boron compounds. AIME Southwest Metals and Minerals Conference, Los Angeles, April 1960.

Industrial Minerals of Nevada and Their Future by Robert C. Horton—The development of industrial minerals in Nevada has been, and will continue to be, dependent upon the general development of western industry and transportation facilities. Early production of common salt, using camels for hauling, answered a demand by the mills of the Comstock Lode. Production of borates, soda salts and other raw chemicals also resulted from a demand by the extractive metallurgy industry, at that time the most important industry in the West. With the discovery of more easily recovered deposits and improvements in transportation the production of these minerals all but ceased.

Improved transportation made more distant markets available for other Nevada products. Gypsum, diatomite, barite, and fluorite were produced following World War I. With the continued expansion of western markets other bulk products became valuable. Among these are perlite, silica sand, limestone, and various clays.

Industrial minerals presently produced will continue to find new and larger markets. As other sources are depleted commodities such as cement rock, feldspar, clays, and chemical salts will be produced. AIME Southwest Metals and Minerals Conference, Los Angeles, April 1960.

Economic Geology of the South Ore Body, Pine Creek Mine by Clair M. Kunkel—The Pine Creek tungsten mine is situated in the Sierra Nevada about 30 miles northwest of Bishop, Calif. The outcrops are along a granitic-marble contact at elevations in excess of 11,000 ft.

The oldest rocks are metasediments of probable Cretaceous age consisting of marble, schist, hornfels, and calc hornfels. The rocks were intruded by a series of granitics at the close of the Nevadan Revolution. The oldest of the granitics is a quartz diorite followed by granodiorite and quartz monzonite. The youngest intrusive is a light-colored granite or quartz monzonite with which there is associated numerous alkali, aplite, and pegmatite low dipping dikes. Economic minerals are scheelite, powellite, molybdenite, chalcophyllite, and bornite. AIME Southwest Metals and Minerals Conference, Los Angeles, April 1960.

Application of Mining Geophysics in Western Ore Deposits by Stanley H. Ward—The use of geophysical methods in mining exploration in the State of California prior to 1950 was extremely limited in scope and intensity. Much of this negligible amount of work involved a very casual use of the dip needle in outlining magnetite deposits and basic rock units.

Subsequent to 1950, airborne and ground magnetic surveys became common place in the search for the magnetic iron deposits of the Mojave Desert region. However, these latter surveys still represent a small percentage of the total geophysical work completed annually in the continental United States. No significant and extended use of geophysical methods has been employed in the search for copper ores, for example.

This lack of use of modern exploration techniques largely reflects the low evaluation of the mineral potential of California assigned by major mining companies. Despite this conventional and dismal outlook not, incidentally, held by many major steel companies—the very lack of use of geophysical methods, particularly in so-called "saturation prospecting," in the opinion of the writer warrants very serious reflection. Perhaps something has been overlooked.

This somewhat optimistic exploration philosophy adopted by the writer is considered in relation to the new geophysical tools which might be adapted for use in the State of California and to the current intensive

and extensive use of geophysical methods in the search for copper ores in Arizona and New Mexico. AIME Southwest Metals and Minerals Conference, Los Angeles, April 1960.

Percentage Depletion by Glen R. McDaniel—The Internal Revenue Code allows a deduction for "percentage depletion" to certain taxpayers engaged in the extractive industry. The amount of this deduction can determine the economic feasibility of ventures in this industry.

There is much controversy between the Treasury Department and the courts concerning the basis for the computation of the percentage depletion deduction. The controversy revolves around the meaning of the terms, "gross income from the property," "gross income from mining," "net income from the property," "ordinary treatment processes," and "commercially marketable product." A case on appeal to the U.S. Supreme Court may resolve some of these questions.

While these terms are technical and the computation of percentage depletion is often complicated, the businessman and engineer must have some basic understanding of them. AIME-ASM Pacific Northwest Metals and Minerals Conference, Portland, Ore., April 1960.

Beneficiation of Southwest Oregon Beach Sands by High Tension and Magnetic Dry Processing by J. F. Hunt—The author describes the actual processing of the government stockpile of chromiferous sands, located at Coquille, Ore., during 1955 and 1956. A general history of the stockpile is given, along with a background of the geology and origin of these sands. The flow sheet used in this operation is outlined in detail, and the minerals won from the stockpile by high tension and magnetic processing are discussed as to their purity and saleability. Among these minerals are chromite, ilmenite, magnetite, zircon, garnet, rutile, monazite, gold, and platinum. Planned post-stockpile operations on the present beach deposits are discussed. These operations would have been carried out to set up a continuous integrated mining and beneficiation project, except for unforeseen circumstances which dictated the closing of the operations at the exhaustion of the government stockpile. AIME-ASM Pacific Northwest Metals and Minerals Conference, Portland, Ore., April 1960.

14 CAT DW20 RIGS HELP SPEED PRODUCTION IN THE LUCKY Mc URANIUM MINE!

Located in isolated Gas Hills, Wyoming, the Lucky Mc Uranium Mine is classified as a medium-large open pit installation. Ore deposits occur from surface to depths of 500 feet. Overburden is composed mainly of loose sands and sandy shales. The stripping contractor, Utah Development & Mining Co., operates a fleet of 18 tractor-scrapers to haul this material. Mainstays of the fleet are 14 four-wheeled Cat DW20 rigs. Working 20 hours a day, 6 days a week, the fleet averages 30,000 yards a day on hauls of $\frac{1}{4}$ to $\frac{1}{2}$ mile with maximum 6% grade. Two Cat No. 12 Motor Graders maintain the haul roads to keep the scrapers rolling.

Just as at Lucky Mc, the DW20 Series G Tractor and No. 456 Scraper is ready to deliver faster cycles and bigger loads on your job. Here's why: it packs 345 HP (max. output) and 12% higher rimpull compared to the former model. This increased rimpull provides up to 20% faster travel speeds under similar conditions. The new No. 456 Series B LOWBOWL Scraper has 8% greater capacity—19.5 cu. yd. struck; 27 cu. yd. heaped. There's also a new No. 482 Scraper, with a capacity of 24 cu. yd. struck; 34 cu. yd. heaped.

New optional SynchroTouch Transmission Control

Now optional for the DW20, the SynchroTouch Transmission Control is an advanced new way to shift gears faster and easier. The operator simply dials desired gear for automatic, split-second, touch-and-go response. Result: faster cycles and more payloads per hour.

With all its improvements, the new DW20-No. 456 meets your needs for moving more dirt at lower cost. See this high-capacity hauler at your Caterpillar Dealer. Ask him to demonstrate. Pick a tough job—watch it handle the hard work!

Caterpillar Tractor Co., General Offices, Peoria, Illinois, U. S. A.

A HISTORY OF PROGRESS

"In European countries, where the arts of mining and metallurgy have long been the subject of the most careful study, no means have been found so effectual [to promote the arts and sciences connected with the economic production of the useful minerals and metals and the welfare of those employed in these industries by all lawful means] as the free interchange of experience among those actually engaged in these industries; and this object has been accomplished mainly through the medium of 'Institutes', 'Associations', or 'Societies', composed of those engaged in these occupations. . . .

"It must be evident to all practical men that the interchange of the varied experience of those engaged in such occupations in this country, could not fail to advance very materially the desired objects; it is therefore proposed to establish an American Institute of Mining Engineers"

So read the original call to American mining engineers in April 1871. One month later, May 16, 1871, the American Institute of Mining Engineers was founded by 22 men who met in Wilkes-Barre, Pa. In addition to founding AIME, these men were also pioneering in American professional societies—for AIME is the second oldest professional engineering society in America. The Society of Mining Engineers of AIME is the direct lineal descendant of the original organization.

Growth and diversification over the succeeding years put the word *Metallurgical* into the official title in 1919, and most recently, the full-fledged rank of *Petroleum* was given official recognition in 1956. However, the two most important years in the life of the organization since its founding were probably 1911 and 1949. In the former year, the Institute made changes to foster the effectiveness of the organization. This was the time when the first Local Sections were formed, the first technical committees were organized, the first membership committee was initiated, and the first Committee on Publications was established.

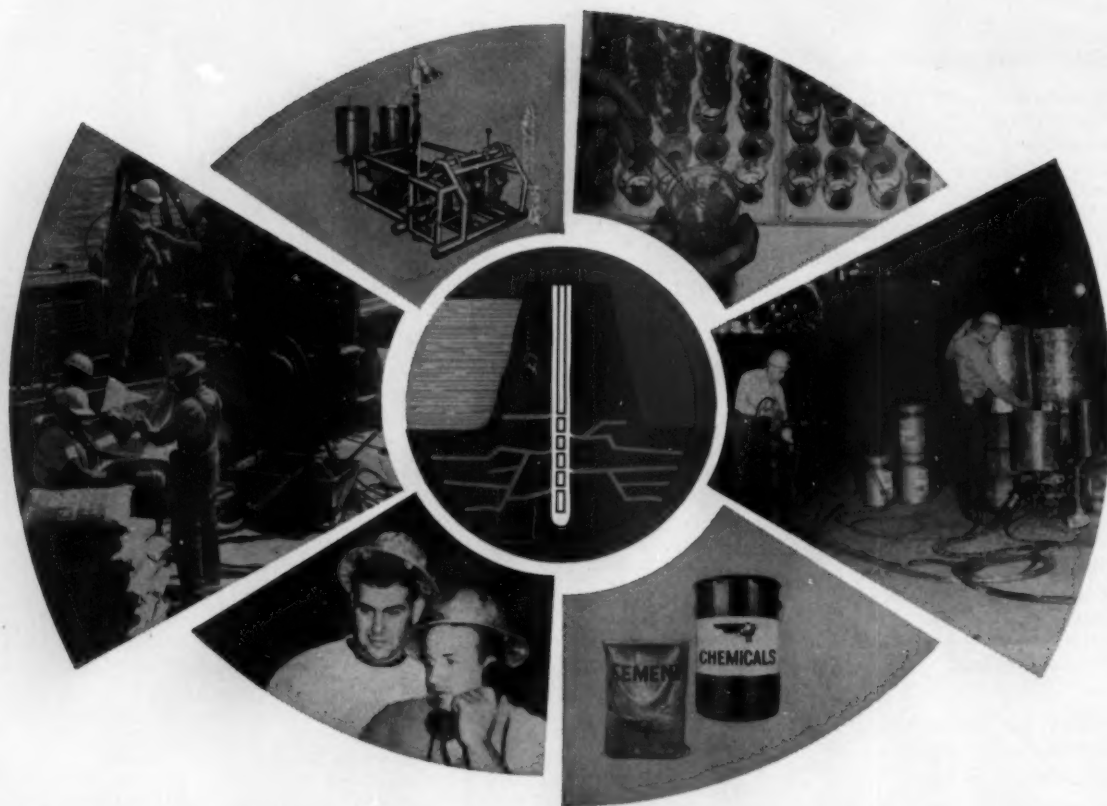

In 1949, the Institute underwent a modernization program to meet the changing conditions within it. The reorganization included many facets: meetings, sections, publications, and creation of the Branch structure. This Branch structure formed three semi-independent groups—Mining, Metallurgy, and Petroleum—and was the foundation on which the Long Range Planning Committee in 1957 was to formalize the present three Societies of the Institute.

"As the membership has increased, and as the scientific interests of the members have broadened and deepened, so has the complexity of the administration of the AIME increased. Reorganization has followed organization throughout the history of the administration. Several of the reorganizations have demanded changes in philosophy as to methods of serving the membership more effectively."*

*"Long Range Planning for Institute Development", *MINING ENGINEERING*, June 1956, p. 646.

But the goal of the Institute has not changed materially in its 89 years of existence. The primary mission of AIME—and more specifically, the Society of Mining Engineers—is to serve as a vehicle for the dissemination of news and technical information among all members of the mining industry. From corporation presidents to engineering trainees trying to find their way out of a labyrinth of drifts and stopes, the Society of Mining Engineers provides a common and natural meeting ground for the free interchange of theories, thoughts, and experience by which all those who desire may profit.

The roster of members of the Society of Mining Engineers included in this issue is, in a sense, a progress report on the Institute's growth. *Rixford A. Beals*

FULL SCOPE OF SERVICE

Halliburton *Full Scope* Pressure Grouting Service offers a balanced selection of the best grouting methods and materials available today. To give you the complete picture of the many benefits of this outstanding service, Halliburton has prepared a comprehensive grouting brochure which is available now on request. A few of the advantages offered by Halliburton Pressure Grouting Service, and presented in this brochure, are outlined below.

CHEMICAL GROUTING

...research designed and job proven for helping control unwanted water infiltration, seepage and leakage. Chemical grouts offered include HYDRO-LOK (PWG), HG-10 RESIN and BLOX-ALL. These low viscosity grouting agents contain an internal catalyst allowing injection as a single fluid for timed reaction. This permits the chemical grout to be injected in a single operation for closer control and more uniform setting throughout the entire permeability of the formation than with agent-plus-catalyst double injection chemical methods.

CEMENT GROUTING

...with Halliburton cements, retarders and accelerators for helping to seal large fissures and solution channels in water-bearing formations... and special water-reactive cement grouts for use where troublesome water flows are encountered. These products — together with Halliburton research and know-how — give the greatest selectivity available for choosing the right grout — light or heavy, and the best setting characteristics — fast or slow.

PUT THESE PRODUCTS AND TECHNIQUES TO WORK FOR YOU. When soil stabilization or water control problems point to pressure grouting... call on Halliburton... and Compare the Results!

ANACONDA UNDERTAKES DEVELOPMENT PROGRAM

REPORT ON SELECTIVE MINING OPERATIONS AT BUTTE

While mining silver at Butte in 1882, Marcus Daly is reputed to have told his partners in The Anaconda Silver Mining Co., "It looks rather gloomy. The vein is running into copper." Recently, The Anaconda Co. authorized an \$11 million expenditure to be made over the next five years to ensure their "running into copper" at deep levels for many more years. The new development program is designed to permit both deeper and more widespread selective mining in "the richest hill on earth" by means of additional shaft-sinking, reactivating closed mines, and establishing new haulageways and centralized hoisting facilities.

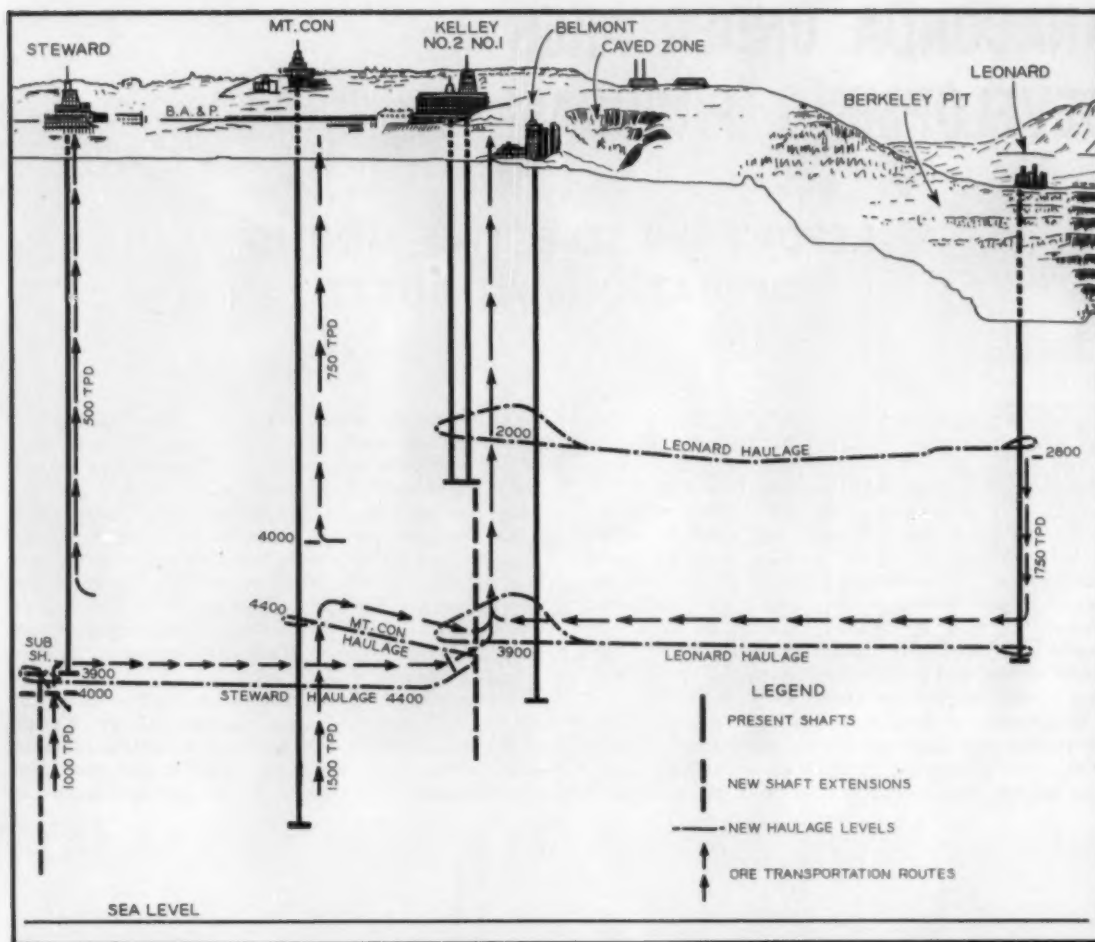

Historically a deep level selective mining camp, Butte will now continue its uncommon use of three main types of mining methods at one camp—selective mining, block caving, and open pit mining. It

was thought by some people that the construction of the Kelley shaft and the subsequent beginning of block caving operations in 1952—outgrowth of the Greater Butte Project—signaled the end of stope mining of high-grade ores at depth. This feeling became more pronounced when, in 1957, the Berkeley open pit commenced operations. During recent years, the tonnage of ore mined selectively underground has decreased, but the new program will maintain the position of selective underground mining in the overall picture of the Butte operations for many years to come.

The key to initiation and success of this program lies in the large hoisting capacity of the Kelley shaft No. 1, which will serve as a central hoisting shaft for the deep-level, selectively mined ores from the Mountain Con, Steward, and Leonard mines as

The Tuolumne shaft, shown under construction in the foreground, will serve as the central pumping station. Behind the Tuolumne rises the tower of the Modoc shaft which is to be the central exhaust ventilation station of the mines.

Plan of operations.

well as for ore from the continuing block-caving operations nearer the surface. The Ryan shaft—a deep-level centralized hoisting project—was previously considered, but the drop in the copper market in 1956 forced the project's abandonment. The new large-scale program is a more economical approach to accomplish centralized hoisting and haulage of vein-type ore.

Five major projects will be undertaken to put this new mining program into effect:

- 1) Deepening the Kelley No. 1 shaft to the 4600-ft level and converting it to a central hoisting shaft.
- 2) Deepening the Steward shaft to the 5000-ft level via a sub-shaft.
- 3) Driving haulage ways from the Kelley shaft to the selective mining zones of the Steward, Mountain Con, and Leonard mines.
- 4) Constructing new central pumping through the Tuolumne shaft.
- 5) Constructing a new exhaust ventilation outlet through the Modoc shaft.

In addition to the above, the Belmont mine, closed since the latter part of 1956, may ultimately be re-opened and connected with the Kelley haulage and hoisting system.

Such mine planning must carefully integrate the three methods of ore extraction at Butte. The selection and location of new centralized ventilating and pumping installations required consideration of future open pit encroachment as well as potential subsidence due to block-caving operations. Dumping of waste material from the Berkeley open pit eliminated still other areas for potential long-range shaft life. Unique solutions to these problems have been found, and The Anaconda Co.'s recent announcement in Butte that deep level mining will be extensively reactivated indicates successful economic solutions to the technical problems involved.

No time has been lost in getting the new program under way. The Tuolumne shaft is presently being enlarged and concreted to serve as the new central pumping shaft for removing water from all the mines. Initial work in the Steward shaft has commenced and shaft-sinking operations in the Kelley mine will begin later this year.

UNDERGROUND CONSTRUCTION

The Kelley mine has two shafts—a large five-compartment hoisting shaft (shaft No. 1) and a smaller, slightly shallower service shaft (shaft No. 2). The new underground mining program requires sinking of shaft No. 1 an additional 1718 ft to the

4600-ft level. The shaft, largest of its type in the U.S., measures 38x10 ft in rock section and about 35x7 ft concreted. It will handle approximately 4250 tons of ore raily from the Steward, Mountain Con, and Leonard mines plus additional tonnage from the block-caving operations at higher levels.

Kelley shaft No. 2 now provides service to the 3000-ft level and present plans do not indicate that it will be deepened. Such shaft sinking is not required at this time because the existing shafts at the Mountain Con and Steward mines will provide service to the deepest level of these mines.

Haulageways for tramping ore from the Mountain Con and Steward mines will be driven from the 4400-ft level of the Kelley; haulage from the Leonard will be via a 6450-ft long cross-cut on the Kelley's 3900-ft level. These haulageways are designed to accommodate the large underground motors and cars of the type now being used in block-caving operations in the upper levels of the Kelley mine.

Present focal point of interest in the Steward mine is on the 3900-ft level, where an engine room has recently been concreted. The room is 45 ft long, 33 ft wide, and 23 ft high and houses a 600-hp double-drum hoist to service sinking operations on the Steward sub-shaft. This hoist had been dismantled on the surface and lowered to the engine room where it was reassembled.

The Steward sub-shaft will require two years for completion. This three-compartment concreted shaft provides in effect a 1300-ft extension to the present Steward shaft. To bottom at 5042 ft, it will make the

Steward mine slightly deeper than the present Mountain Con, now Butte's deepest at 4996 ft.

DEEP-LEVEL MINING PLAN

The general scheme of the new underground operations is shown in the accompanying diagram. Although the Kelley shaft No. 1 will serve as the central hoisting system, the shafts of the Steward and the Mountain Con mines will also be used to hoist ore from their own middle and upper levels. The diagram shows the potential flow of 5500 tons of ore per day from the selective mining operations when the project is completed.

At the Steward and Mountain Con, all ore mined below the 4200-ft horizon will be tramped over the 4400-ft main haulageway to the Kelley hoisting shaft. Approximately 1000 tpd from the Steward and 1500 tpd from the Mountain Con will be hoisted at the Kelley shaft. All ore extracted above the 4200-ft level in these two mines will be hoisted up their own existing shafts. It is anticipated that the Steward and Mountain Con will transport 500 and 750 tpd respectively in this manner. By relieving the hoisting installation at these two shafts from hoisting ore from extreme depths, it will be economically feasible to reactivate a selective mining program in ore zones at medium depths in both mines.

Mining operations to be conducted in the reactivated Leonard mine will differ from those in the Steward and Mountain Con mines because future subsidence will necessitate closing-off the upper levels of this shaft. A bulkhead will seal off this upper portion above the new service entry which has been driven on the 2000 ft horizon from the Kelley shaft No. 2. Ore from the Leonard will be transferred

Interior of the new engine room being constructed on the 3900-ft level of the Steward mine. The room will house an 600-hp double-drum hoist to service sinking operations of a new sub-shaft. The shaft will reach a 5042-ft depth. Cable from the hoist will pass through the opening of the 105-ft-long raise shown in the upper center of the picture.

The 600-hp hoist for use in the shaft-sinking operations in the Steward mine is being dismantled on the surface prior to its transfer to the new underground engine room. After the Steward sub-shaft is sunk, the hoist will bring up ore from the deep-level mining operations to the 4400-ft haulage level for tramming to the Kelley central hoisting shaft.

by ore-pass to the 3900-level haulageway and transported to the Kelley hoisting shaft.

VENTILATION AND PUMPING SHAFTS

Surface subsidence due to block-caving operation, the gradual extension of the Berkeley pit, and the growing waste dumps from open pit operations have dictated the location and design of the new ventilation and pumping facilities which will service all underground mining operations in Butte. The Modoc shaft and the Tuolumne shaft will serve respectively as ventilation shaft and pumping shaft. These two shafts will be unique because the top of each has been constructed to extend more than 150 ft above the original ground surface.

Pumping Shaft: The High Ore shaft, employing a 3800-ft drainage level, now serves as the central pumping shaft for underground mines. However, the upper part of the shaft is being encroached upon by surface subsidence. To provide a new central pumping shaft with the promise of many years of useful life, the old Tuolumne shaft is being deepened, enlarged, and concreted. A five-year project that has already been started, the shaft will be extended downward from its present 3000-ft depth to the 3900-ft horizon. At this point it will be connected to the existing 3800-ft level drainage system by driving an 1800-ft cross-cut.

The Tuolumne shaft is located on the east side of Butte Hill in an area now used for dumping waste material from the Berkeley pit. As open pit operations continue, this dump has risen 150 ft above the present surface. To allow for this, a 160-ft high concrete tower and collar has been constructed on top

of the old shaft. A Koepppe-type hoist will provide service to the top of the pumping installation.

The present pumping system at the High Ore mine employs a four-stage water lift. Water is pumped from the present 3800-ft drainage level to the 2800, 2200, 1200-ft levels and then to the surface. When the new pumping shaft is put into operation, it may utilize large-capacity pumping equipment capable of handling water from the 3900-ft level in just one lift. If present plans are carried out it is expected to be the deepest one-lift pumping installation in the world.

Ventilation Shaft: The historic Modoc shaft is being prepared as the new air shaft for underground operations. The block-caving operations with resultant surface subsidence required selection of a shaft some distance from the main exhaust collection point underground.

The Modoc, a 16-ft diam shaft, has been sunk 980 ft. From its bottom, dual horizontal airways have been extended 700 ft to another 16-ft diam shaft that is located completely underground. The secondary shaft has been extended downward an additional 480 ft to take the exhaust air course outside of future subsidence areas. A concrete tower similar to the one being constructed on the Tuolumne shaft will top the Modoc.

CONCLUSION

To say that Butte has received a new lease on life is erroneous. The importance of this new program lies in its making economically accessible the high-grade vein deposits that are known to exist at depth. Assuming proper economic conditions in the copper industry during future years, selective mining will continue in Butte for many more decades.

BENEFICIATION OF AGGREGATE BY HEAVY MEDIA SEPARATION

by DONALD W. JENKINSON

The cement aggregate industry has adapted heavy media separation to upgrade many deposits which heretofore have been unacceptable for use. This article is a brief report on the growth of this interesting and relatively new application of gravity concentration.

Many types of gravity concentration equipment have been employed throughout the years since beneficiation of materials has been practiced. These include jigs, concentrating tables, vanners, sluice boxes, heavy media cyclones, and static heavy media separators or sink-float separators.

In the beneficiation of coarse aggregate for concrete mixes, static heavy media separation employs the same principles of gravity concentration involved in separating lead-zinc ore, dolomite, limestone, diamonds, manganese, iron, and many other minerals. In aggregate beneficiation, as in most metallurgical operations, sink or heavy fraction is the product. The undesirable portion of coarse gravel is usually much lighter than the desirable particles, allowing most aggregates to be amenable to gravity concentration methods.

Heavy media separation was first applied to aggregate on a commercial scale in 1948 at Rivers, Manitoba, in connection with airstrip runway construction. This method of separation was economically justified when the capital expenditure and operating costs of the process were balanced against an approximate freight rate of \$2.50 per cu yd for aggregate from the nearest acceptable commercial gravel pit.

Since this first plant was built, the use of heavy media separation in the cement aggregate industry has grown steadily. To date, 27 additional plants employing this technique have been constructed. Geographically, the majority of installations are concentrated in Michigan and the surrounding areas of Ohio, Minnesota, and Illinois. In addition, there are three installations in Canada, four in California, and four in Utah. All of these plants are located in areas which have at least one of the following characteristics:

D. W. JENKINSON, Member AIME, is with Western Machinery Co., San Francisco, Calif.

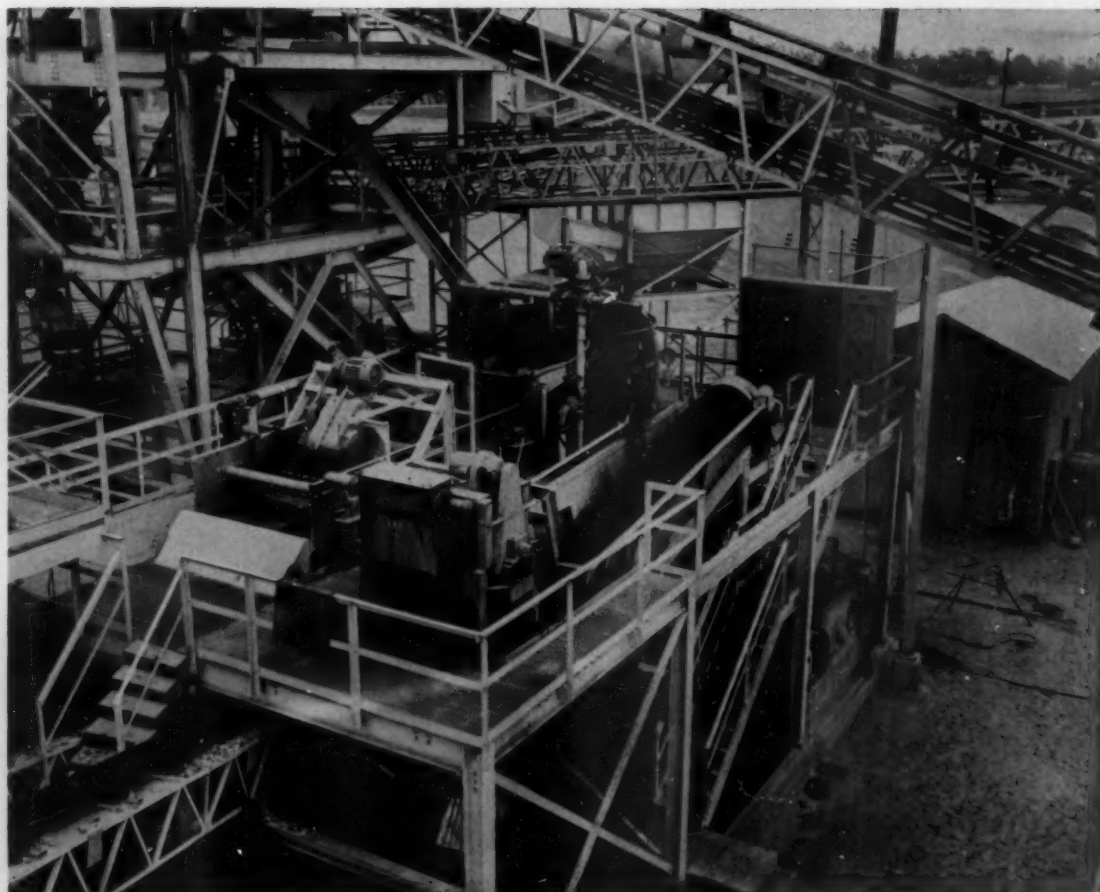

1) Gravel beds containing a high percentage of deleterious material, generally in regions of extensive glacial deposition.

2) Concrete structures subjected to frequent freezing and thawing cycles.

The advantages of processed aggregate are many, but the most important is its contribution to the durability of concrete. It is well known that a soft, nondurable stone will cause imperfection and early failure in concrete, but it is not so apparent that some hard stones may also cause imperfections. These hard stones, termed *absorbent* in the aggregate industry, will expand and disintegrate when subjected to moisture and freezing, particularly at or near the surface of the concrete structure.

Specifications of Aggregate: Specifications now in practice for determining the quality of coarse aggregate are not generally compatible with a gravity analysis, as most of them were written before beneficiation was introduced to this field. Furthermore, specifications vary according to local and state requirements. Ordinarily such specifications are written to limit the percentage of individual stones that are classified as *deleterious*, as well as the total or combined deleterious material allowed in the product. A deleterious classification may contain organic materials, chert, clay, soft and nondurable particles, hard and absorbent particles, shale, coal, lignite, and many other particles not specifically identified. Presently, the percentage of deleterious stones is usually determined by visual inspection and identification.

Heavy Media Separation: For those projects where use of coarse aggregate subjected to heavy media separation is economical, the desired (or required) specifications of an aggregate sometimes place a heavy burden on the aggregate producer as well as the manufacturer of gravity concentration processing equipment. The major problem is to in-

A heavy media separation plant constructed by Western Machinery Co. for the processing of coarse aggregate.

tegrate these specifications into a function of the gravity analysis of the desired products. If the desired specifications can be met by skimming the very lightest-weight fraction of the deleterious material such as organic material, coal, and shale, the separation is relatively easy. However, when it becomes necessary to remove chert, iron-bearing stones, or other materials which may not have a clearly defined density, the problem is more difficult and an analysis must be made to determine the specific gravity of acceptable and unacceptable particles.

In the latter category it is generally necessary to make a very sharp separation at a predetermined specific gravity. This must be done not only to obtain maximum recovery, but also to meet rigid specifications. When the density of a deleterious particle approaches the density of the sound stones and a sharp separation is *not* made, it has been found that in a liquid where the separating gravity is greater than the specific gravity of the stones, good stones are rejected at a faster rate than the unsound or deleterious particles. Thus deleterious materials may be concentrated in an intermediate or middling gravity range which, unless the middlings are removed, may cause serious dilution of the desired concentrate or sink material.

On two dam projects, the Glen Canyon Dam and the Flaming Gorge Dam, it was determined that aggregate heavier than 2.50 sp gr would make a satisfactory concrete. A specification was then written to

allow not more than 2 pct material lighter than 2.50 sp gr in the coarse aggregate. At another project where similar tests were conducted on locally available aggregate, it was determined that 0.25 pct was the maximum allowable light-weight material.

This type of specification is much easier to work with, and sharpness of separation becomes of paramount importance in producing the specified sink product while keeping the amount of sink particles in the float to a minimum. Field measurements can readily determine if specifications are being met and can be used to evaluate efficiency of the operation.

In recent years the U.S. Bureau of Reclamation has written specifications adapted to the capabilities of commercial equipment and the common practices in making gravity separations. In specifying the amount of light-weight material (the deleterious fraction) permitted in the concrete aggregate, the Bureau offers a readily measurable ratio, which may be determined by immersing the sample in a heavy-liquid bath and then weighing the total amount of float material.

The application of heavy media separation by aggregate producers has permitted the use of many gravel pits which, in their natural state, contain too high a percentage of deleterious material to be of value to the construction industry. Upgrading these deposits by gravity concentration has permitted such gravel pits to economically supply suitable quantities of coarse aggregate.

MAN-CARS AT IDRIA

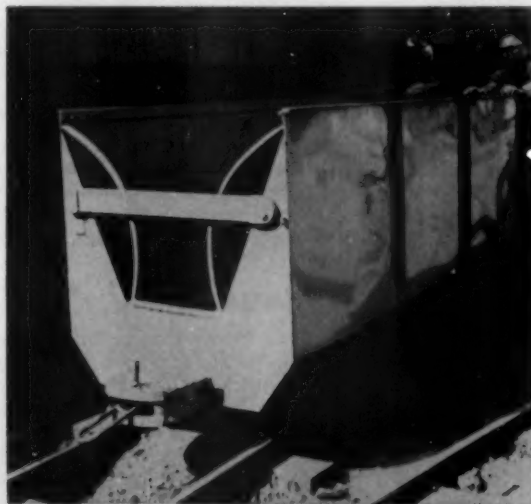

by FRANK S. HURLEY, JR.

To comply with the California Mine Safety Orders pertaining to transportation of mine workers over mine railroads, the management of the New Idria mine in San Benito County, Calif., designed special man-cars. The new regulations, dated October 1958, make it mandatory for mine man-cars to be designed for carrying five or more men to and from the mine workings. At the New Idria mine, largest single producer of mercury in the U.S., each shift normally employs about 70 men. However, with the possibility of a future increase in the work force, seven man-cars were constructed with a total carrying capacity of 84 men.

F. S. HURLEY, JR., Member AIME, is a geologist with New Idria Mining & Chemical Co., Idria, Calif.

The general design of the mine man-cars was dictated by safety regulations plus the physical characteristics of the mine—low headroom, limited side clearance in haulageways, and track irregularities due to ground swells. The cars measure 10 ft long, 44 in. wide, and 50 in. high and were built at an average cost of \$450 per car. All assembly work was done at the mine site.

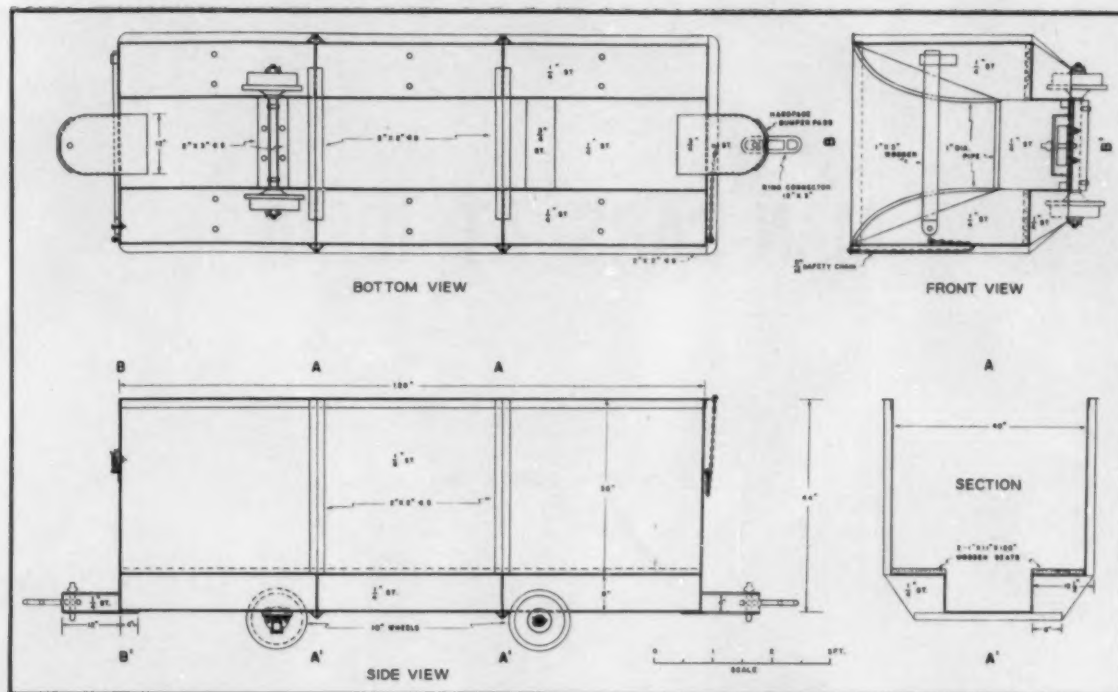

Prior to introduction of the new man-cars, ore cars had been used to transport the workers into the mine. These cars are of standard size with 24-in. track gauge and I beams supporting 12-in. diam wheels. Men sat on boards placed across the bottoms of these cars and reclined against the car side. In this position their heads were above the sides of the

A man-car now in use at the New Idria mine.

Miners at New Idria preparing to go underground.

Plan of new man-cars.

cars and, in some places within the mine, the men were forced to duck their heads to avoid hitting the low ceilings.

DESIGN FEATURES

The new cars were specifically designed to increase the comfort and safety of personnel. They are constructed of $\frac{1}{8}$ -in. steel plates on the rear and sides which are reinforced by $2 \times 2 \times \frac{1}{8}$ -in. angle irons. Steel plates of $\frac{1}{4}$ -in. thickness form the bottom of the car. The plates are welded together in an

integrated framework-box design that eliminates the need of I beams or any other type of frame. Thus the cars have greater depth and, as a corollary, higher sides. Miners are now adequately protected by the steel siding, which extends several inches above their heads. In addition, track-clearance has been further reduced by use of 10-in. diam wheels rather than the 12-in. diam wheels of the ore cars. This lowers the cars another 1 in. and places the car floor only $6\frac{1}{4}$ in. above the rails. By lowering the center of gravity of these cars, very little sway is incurred when the men are in transit.

Both axles have been placed between two $2 \times 3 \times \frac{1}{8}$ -in. angle iron strips 18 in. long. The angle irons permit the axles to move up or down $1\frac{1}{2}$ in. to prevent twisting of the cars caused by irregularities in the track. Steel straps, $1 \times \frac{1}{2}$ in., are used to retain the axles between the angle irons.

Within the cars, two $1 \times 1 \times 144$ -in. wooden seats are bolted to the $\frac{1}{4}$ in. steel plates that form the bottom of the cars. These seats are $15\frac{1}{4}$ in. above the railroad tracks. The steel plate which encloses the rear of the car protects the seated occupants from drafts due to the forced ventilation in the main haulageways.

SUMMARY

To date, the cars have proved more than satisfactory. After the initial stage of experimentation, the cars have not been altered. Although no springs or suspension system is incorporated in the cars, the riding characteristics are quite smooth.

It is hoped that the success and low cost of this type of "do-it-yourself" mine man-car now in use at New Idria mine will be of possible interest to other mine owners with similar problems.

WATER

A CONTROLLING FACTOR OF COPPER PRODUCTION

by S. D. MICHAELSON, B. H. ENSIGN, S. J. HUBBARD, and A. W. LAST

Scarcity of water in arid regions makes it mandatory to determine the best, most economical use of this natural resource in desert climates. The copper industry in the West and Southwest has adapted itself to its environment, but further growth of the industry is necessarily related to the availability of adequate supplies of water.

Of the seventeen western states, five—Arizona, Utah, New Mexico, Montana, and Nevada—produce about 90 pct of this country's primary copper. All seventeen of these states occupy 60 pct of the nation's land area but receive only 25 pct of the country's total precipitation. Seventy percent of this precipitation returns directly to the atmosphere through evaporation and transpiration, leaving very little for ground reservoir recharge or immediate domestic, agricultural, or industrial use. With so limited a supply available for all, competition for water rights among users is severe. The result does not always permit using the limited supply to produce the most valuable end product.

Most of industry and much of agriculture can shop around for suitable operating locations. Where water is critical to their purposes, they can and do locate in areas where the needed amounts are available. Such is not the ordinary lot of the mining industry, which must locate in the area of the deposit it is planning to mine and concentrate. In the case of copper this happens to be, for the most part, right in the heart of the semi-arid regions of the West.

The importance of water to the copper industry is illustrated by Table I, which shows the average annual rainfall in the major copper-producing districts of the U.S. and their corresponding 1958 output of

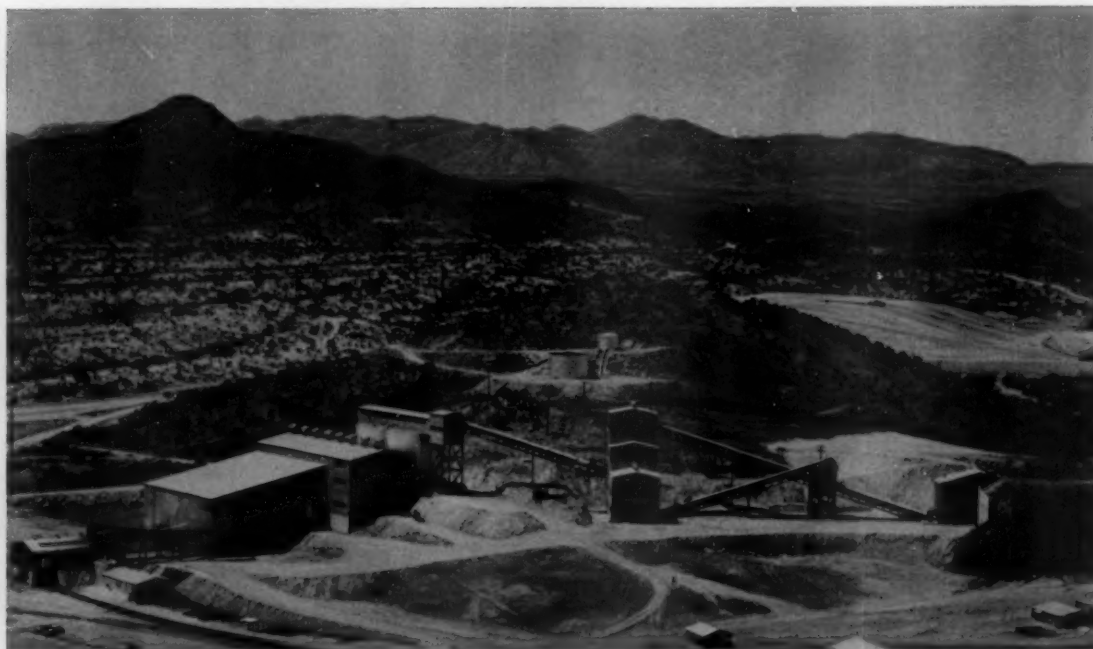

Table I. Rainfall and Major U.S. Copper Production

District	1958 Copper, Tons	Total U. S. Production, Pct	Rainfall in District, Avg. In.

San Manuel	74,701	7.54	20

copper. It is worth noting that the entire U.S. receives rainfall averaging 29 in. per year, as compared with the figures given in Table II for the lush agricultural areas and the near-arid areas of copper mining activity.

Value of Water to Competing Water-Using Industries: The relative worth of the limited water used in nonmanufacturing industries in the Southwest can be determined by comparing the values of their various products obtained from the area. Statistics for Arizona are particularly significant, since this state alone produces 49 pct of the country's copper. Arizona receives an average of only 16.4 in. of rainfall annually over the copper-producing areas. In these same areas also are located important agricultural and cattle-growing industries which com-

S. D. MICHAELSON is Chief Engineer, B. H. ENSIGN and S. J. HUBBARD are Staff Engineers, and A. W. LAST is Chief of Ore Dressing Section, Research and Engineering Center, Western Mining Divisions, Kennecott Copper Corp., Salt Lake City, Utah.

The arid climate at the Pima plant testifies to the importance of water conservation in Arizona's copper belt.

pete directly with mining for available water. Table III shows annual values of the various products of these Arizona industries. The dollar yields of each product per 1000 gal of water consumed are particularly interesting. The agricultural and cattle-raising figures were calculated on the basis of U. S. Department of Agriculture data reported for 1958.

Of the eight agricultural crops showing the greatest dollar yield in 1958, lettuce—which has a value of \$4.52 per 1000 gal of new water used—is the only crop that approaches the copper industry's dollar yield of \$7.80 per 1000 gal of water consumed.

Note that the net economic productivity of the water used for raising livestock in Arizona is only 30¢ per 1000 gal, or about 1/25th of the value of the copper produced with the same volume of water. But this is not the whole story. The hay produced in the state accounts for only one-fourth of the cattle feed required. If an accounting were made for the water used in growing the remaining three-fourths

of the feed, it would reduce the equivalent water value of the cattle to a negligible amount.

These data show that the copper mining industry uses water more efficiently, in terms of the value of its product, than any major agricultural or livestock industry in Arizona.

The long-range welfare of the nation can be served best by channeling its raw materials into products that have the greatest value to modern society. The present methods of allocating limited water supplies among competing users sometimes tend to subvert this principle and, instead, often rely on outmoded precedents and laws and on political expediences. As a result, water is sometimes used in critical water-short areas to produce relatively low-value products that could be produced just as readily in areas having abundant water supplies, rather than to produce high-value products of industries that cannot locate elsewhere.

Use of Water in Producing Copper: The copper industry, like most industrial enterprises, uses considerable water. About 40 gal of process water are required to produce 1 lb of blister copper. For the 1776 million lb of blister copper produced in 1958 in the five western states being considered, this amounted to approximately 71 billion gal. Table IV shows where this water is used.

The actual mining itself accounts for only 1 pct of the total water consumption, and there is usually little or no problem in obtaining the small amount of water needed to mine copper ore. The major problem occurs in the milling phase, where 91 pct of the total process water is consumed.

In the past, in many cases, mills have been forced to locate at some distance from the mines (usually 15 to 25 miles away), and this location has been governed, in large part, by the availability of water. At the time these plants were located, pipeline transmission was relatively uncertain, but today's technology would permit a different approach.

Table II. Area Rainfall and Water-Consuming Activities

The old Castle Dome, a typical scene of Southwest's copper operations—scrub oak, sagebrush, and settling tanks.

Other factors being equal, a new operation would consider pumping water to a mill adjacent to the mine rather than relying on an ore haulage system to a more remote mill.

In all cases, however, the cost of water delivered to the plant remains a major cost item for the entire operation, and availability of water can limit exploitation of a copper property, reduce the economic potential of processing low-grade ore because of restrictions on tonnage rate and, in some instances, make exploitation impossible.

WATER RECLAMATION IN COPPER PRODUCTION

The scarcity and high cost of new process water at the major plants in the Southwest has stimulated development of various schemes for reclaiming and re-using process water.

The simplest scheme uses decantation towers on the tailings ponds to reclaim clear water effluent from the settled tailings. Large-diameter mechanical thickeners, sometimes used with cyclone separators, are common at the larger plants for reclaiming the water from tailings before they are pumped or sluiced to the tailings disposal areas. Water

losses by evaporation from these systems and from storage reservoirs are minimized by using a blanketing film of cetyl alcohol on the surface of the ponds.

Unfortunately, there may be a limit to the use of reclaimed water if contaminants are introduced or chemical changes occur during the first use of the water in the process. Where this occurs the amount of reclaimed water which can be fed back into the system is governed by the effect on metallurgical recovery and grade of product. Extremes of hardness or pH may make the water undesirable for metallurgical re-use and too expensive to re-treat for re-use. Conversely, the changed characteristics of the water may make it more desirable for agricultural purposes.

Even though the use of reclaimed water in copper mining operations introduces many economic and technical difficulties, reclamation must be practiced in all areas of restricted water supply. Review of the problem at 13 major copper mining operations in the Southwest showed that all were practicing some degree of water reclaiming. Complete detailed data for all properties were not available; however, of the companies studied for which operating details were available, six exercised maximum practical water reclamation. All of the remaining companies prac-

Table III. Values of Arizona Production in Terms of Water Used

	Water Needed, In.	Acres in Use	Product Unit Value, \$	Product Total Value, \$	Value per 1000 Gal of Water \$

View of the plant and the settling tanks at Kennecott's Arthur Mill located in Garfield, Utah. Thickeners here and at other mill sites in the West and Southwest play an important role in the reclaiming and recycling of process water.

ticed partial water reclamation. This does not necessarily mean that this latter group reclaimed only the water that came easily, but rather that the use of reclaimed water must often be restricted for any of the several reasons already mentioned. The ratios of reclaimed to new water used at those properties for which information is available range from a low of 1:1 to a high of 4:1.

Little if any water can be reclaimed from actual mining operations. In the milling stage, however, virtually all process water is theoretically reclaimable—though at prohibitive cost—by using a combination of thickeners, filters, and dryers, sending

would be recycled, probably through the grinding or classification circuit.

2) Install large-diameter thickeners, or a combination of thickeners and cyclones, to densify all tailings rapidly to minimize evaporation losses at the tailings disposal areas. The effluent from this circuit would probably go to the mill tanks for re-use.

3) Select tailings disposal areas on impervious ground to avoid loss of tailings water through the underlying strata.

4) Provide a decantation and water collection system on the tailings ponds to collect all water from the settled tailings. This water would be combined with the effluent from the thickeners and cyclones described in item 2 above.

5) Use cetyl alcohol, or a similar compound, on all process water ponds and reservoirs to minimize evaporation losses.

With a water recovery system of this type, up to 67 pct of the total process water used in the milling circuit could be reclaimed at reasonable cost. With milling requiring about 91 pct of the water used in the entire copper production operation, and with maximum water economy practiced at mine and smelter, this water recovery system would reclaim about 60 pct of the total water required. As a rule-of-thumb it could be said that one ton of new water is required for each ton of copper ore milled, when maximum water economy and maximum practical water reclamation are practiced. This applies only when the quality of the water is unaffected by the ore or the recycling flowsheet.

The maximum quantity of water that can be reclaimed from any circuit will vary from time to time as the settling characteristics of the pulp change, and as the wind, temperature, and humidity vary. For example, at one large copper property the

Table IV. Water Required to Produce Copper from a 15,000-Tpd Mine

	Mine	Mill	Smelter
Product	Ore	Concentrate	Blister copper
Copper in product, pct	0.98	16.85	99.63
Copper recovered from ore, pct	100	86.3	83.7
Tons to product 1 ton blister copper	122.0	6.1	1.0
Water, gal, for 1 ton blister copper	830	70,760	6,280
Total water used, pct	1.07	90.86	8.07

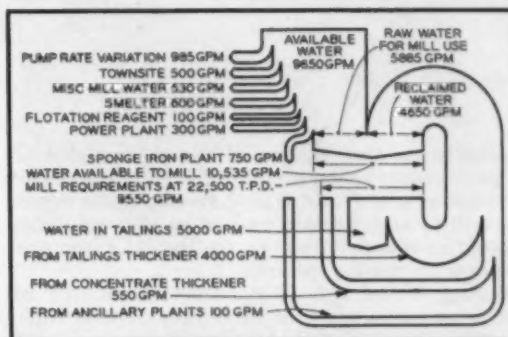

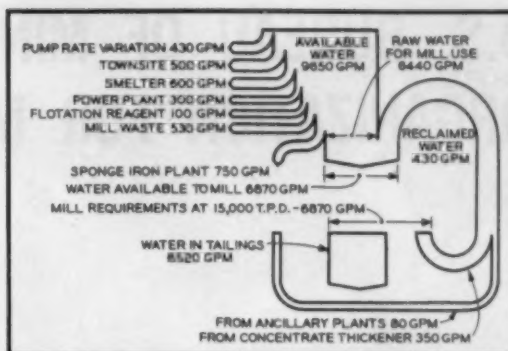

dried tailings to waste, and recycling effluents and condensate. In practice it is extremely difficult and costly to reclaim much more than half the total process water needed at the average property. For such a plant to achieve maximum water recovery, it would be necessary to:

1) Install thickeners in the flotation middling return circuit in the mill to minimize pulp dilution in the middlings retreatment. This thickener effluent

CASE HISTORY OF WATER RECLAMATION IN COPPER PRODUCTION

Some of the water problems encountered in copper mining in the Southwest can be illustrated by a recent case where increased ore reserves made it desirable to schedule a 50 pct increase in production capacity. Existing water rights, amounting to 9650 gpm, were barely enough to maintain production at the unexpanded rate of 15,000 tons of ore per day, even with a limited water reclamation system in use. The company owned some additional agricultural water rights not readily transferable to industrial use. Accordingly the proposed expansion was governed to some extent by the amount of process water which could be reclaimed and re-used. A relatively expensive water reclamation system was engineered to recover—at a cost—nearly half the total initial water brought into the system. The problem was complicated because the dual-process milling flowsheet in use prevented satisfactory metallurgical results from being obtained with water from one of the two milling procedures.

The water balance for this plant at the 15,000-ton daily milling capacity is shown in the upper diagram (right). The water balance for this operation when expanded to a 22,500-ton daily capacity is shown in the lower diagram. Study of the data indicates that a practical limit has been reached in milling capacity with the available water supply.

water recoverable from the tailings pond varies from 22,000 gpm in winter to 18,000 gpm in summer because of differences in evaporation rate alone.

Table V shows the economic effect of water reclamation in producing copper concentrates at four mills. Mill A, which practices partial water reclamation intermittently, produces concentrates valued at only \$7.50 per 1000 gal of new water consumed. Mill B practices limited water reclamation and produces a lower grade of concentrate, but even this has a value of \$8.76 per 1000 gal of new water used. Mills C and D practice maximum practical water reclamation, and even though this results in a high cost for total water used, the production is worth \$15.17 and \$10.10, respectively, for each 1000 gal of new water used. Some additional credit should accrue from any increased production permitted by

the use of reclaimed water if additional new water is not available.

SUMMARY

The copper mining industry needs about 77,870 gal of process water to produce one ton of blister copper from the low-grade porphyry ore deposits in southwestern U.S. The need for new water can be cut to about 31,150 gal per ton by practicing maximum practical reclamation in those cases where process water contaminants do not exist. Because of the scarcity of water in this semi-arid region, which produces 90 pct of the country's primary copper, all major plants practice some degree of water reclamation.

If the value of copper produced per 1000 gal of water consumed is compared with the product values per 1000 gal of water consumed by the agricultural and cattle-raising industries, it is apparent that the copper industry is the most economically efficient major nonmanufacturing user of water in the Southwest.

The technical efficiency of re-using process water in the copper industry appears to have reached its practical limit, at least for the time being. Because of this, and because of the limited overall supply of water and the need to mine increasingly greater tonnages of lower grade ore to maintain production, the industry's water supply problem can be expected to become more and more severe.

Under such conditions, consideration should be given to apportioning water so that the maximum value of product can be obtained from the locally available supply. This would permit the copper industry to expand its low-grade, high-tonnage operations to maintain the necessary metal production of the nation.

Table V. Water Used and Value Produced at Typical Western U. S. Copper Mines

	MILL A No Water Recla- mation	MILL B Limited Recla- mation	MILL C Water Recla- mation	MILL D Water Recla- mation

U.S. BUREAU OF MINES COMPLETES ORGANIZATION FOR MINING RESEARCH

by PAUL T. ALLSMAN

Recently the U.S. Bureau of Mines completed organizational changes that, for the first time since the beginning of World War II, re-emphasize mining research as an important part of its responsibilities. A progress report follows on the Bureau's improved program for mining research.

During World War II the Bureau's mining research lapsed in favor of short-range, more urgent activities. Since the end of the war mining has gradually returned to an economy where reduced costs and increased efficiency are essential to a vigorous industry, and demand for improvement through expanded research is again pre-eminent. In recognizing this situation, the Bureau is again emphasizing mining technology and has reinstituted some of its earlier mining research activities. Recent research, however, follows a more scientific approach in solving mining problems because new technology, particularly new instrumentation, has developed rapidly during the past decade.

At present, most of the emphasis is on basic research. Mechanics of rock failure encountered in mining are being studied intensively to determine better methods of predicting and controlling ground movement. Research to determine the basic principles involved in drilling and fragmentation is proposed with the aim of developing new and cheaper processes for breaking rock. Engineering studies are being conducted in coal mines on alternate methods of roof support and alternate methods of breaking and transporting coal to heighten efficiency and reduce costs. New equipment suitable for mining anthracite and phosphate rock is being developed to increase recovery and safety and lower costs.

NEW RESEARCH FACILITIES

The following mining research units have been established to accomplish the goals more effectively: Health and Safety Research and Testing Center, Pittsburgh, Pa.; Coal Mining Research Center, Pittsburgh, Pa.; Applied Physics Research Laboratory, College Park, Md.; Mining Research Center, Minneapolis, Minn.; Mining Research Center, Denver, Colo.; Office of Mining Research, Rolla, Mo.; Office of Mining Research, Spokane, Wash.; Office of Mining Research, Reno, Nev.

P. T. ALLSMAN is Chief Mining Engineer, U.S. Bureau of Mines, Washington, D. C.

Health and Safety Research and Testing Center: The Health and Safety Research and Testing Center in Pittsburgh was created by bringing together the research and technical groups of the Health and Safety Activity and separating them from routine duties. The Center is principally concerned with research on dust explosions, mine roof control, ventilation, health, electrical and mechanical testing for permissibility, and control of mine fires.

Pittsburgh Coal Mining Research Center: Organizing and staffing of this Center is still in progress. Research is being done or is planned on hydraulic coal mining, degasification of coal seams, and engineering analysis of coal mining practices. Although it is not possible at this time to be specific about the full research program at this Center, the Bureau feels certain that a program will evolve from the type of research now being done. The present program will be expanded to include studies of physical and mechanical properties of coal and associated rock formations. Efficiency of the hydraulic method of fragmentation as compared with other mechanical or conventional methods undoubtedly will bring about research on fragmentation generally.

Applied Physics Research Laboratory: The role of the Applied Physics Research Laboratory in College Park, Md., has been in the process of evolution for nearly 20 years. The Laboratory started with the realization that the principles of physics and, more specifically, mechanics are involved in nearly every stage of mining from the exploration and development phases through extraction and the many ancillary operations.

In developing a comprehensive mining research program it has become apparent to the USBM that applied research can progress faster and go further by including a greater amount of basic research on the fundamental physical principles involved in mining. In view of this, there has been a revised concept of the Laboratory's responsibilities, which have been broadened to include cognizance of the application of physics to all areas of mining in the USBM regardless of commodity area or function.

Minneapolis Mining Research Center: The Center in Minneapolis has been assigned the problem of conducting research in the broad fields of rock penetration and fragmentation. The USBM plans that penetration studies will include but will not be limited to drilling and boring; fragmentation re-

Location of the new U.S. Bureau of Mines research centers—1) Office of Mining Research, Spokane, Wash.; 2) Office of Mining Research, Reno, Nev.; 3) Mining Research Center, Denver, Colo.; 4) Mining Research Center, Minneapolis, Minn.; 5) Office of Mining Research, Rolla, Mo.; 6) Health and Safety Research and Testing Center, Coal Mining Research Center, Pittsburgh, Pa.; 7) Applied Physics Research Laboratory, College Park, Md.

search will include but will not be limited to explosives breakage. Besides the more conventional methods employed in breaking rock, other methods and principles to be studied include application of shock by dielectric and induction heating, other means of heating, and cavitation. Fundamental research on the intercrystalline and intergranular structure of rock also will be studied to discover better ways of breaking rock. In addition, workability standards will be developed for drilling and other fragmentation methods.

Denver Mining Research Center: The Denver Center will conduct mining research on ground control (techniques and rock mechanics applied to mining) as well as on sampling procedures.

Research on ground control now emphasizes better understanding of caving methods, particularly block caving. This research can be broadly divided into study of the factors related to design and study of the behavior of broken rock in extraction.

The sampling research primarily concerns optimum procedures for sampling mineral deposits, stockpiles, placers, and many nonhomogeneous physical characteristics. Statistical mathematics has been found to be a most useful tool in this type of research. A natural outgrowth of developing competence in statistical mathematics will be the emergence of a research program concerning the analysis of mining operations.

Rolla Office of Mining Research: The Rolla office has been assigned the broad field of water control

in mining. In addition, because of early interest at the laboratory, a research program is being conducted on abatement of noise in drilling and underground equipment.

Spokane Office of Mining Research: The Spokane office is authorized to conduct mining research on artificial ground support, a subdivision of ground control. This includes mechanical support—timber, concrete, metal, compacted materials, cementing, and chemical stabilization—and possibly others.

Reno Office of Mining Research: The Reno office is primarily concerned with slope stability in open pit mines, but special research on drilling and ground subsidence also has been assigned.

SUMMARY

When specialized research has been assigned, a center is given the responsibility for engineering studies plus analysis and development of engineering principles on mining technology related to its primary research responsibility. In moving toward the development of areas of specialization, the USBM expects that a degree of competence in general mining engineering will be preserved at each location. Each establishment has been authorized to engage in applied problems in its local region to the extent of this competence. However, the redefinition of responsibilities anticipates that on basic research problems, programs will be assigned on a functional rather than a geographic basis.

SILVER

IN A TIME OF CHANGE

by EDWARD SAMPSON

Despite the many industrial uses, the world market for silver as a commodity is far from free, being dominated by the U.S. Government both through acts of Congress and by policy of the Treasury Department. This discussion will consider aspects of supply, demand, and price with a view to the future.

Changes in Sources of Supply: The world's peak production of silver, 278 million oz, was in 1937. In the 1850's world production was about 30 million oz, having risen from a yearly average of 11 million oz for the first half of the century. From 1860 to 1940 there was a steady rise, broken only by World War I and the depression of the early 1930's.

In considering this rise, and also in looking to the future, it should be borne in mind that silver comes from two kinds of ore; one in which it yields a major part of the profit of mining, and the other in which it is a minor constituent and essentially a byproduct. Most silver now comes from ores of the latter kind which are mined chiefly for lead or copper. Output from these sources, estimated to be about 70 pct of the total, is little affected by variations in the price of silver. Primary silver production is therefore a minor factor and is becoming even more so as the years go by.

For the past 70 years most of the world's production, and the remarkable increase in total output, came from the great bonanza deposits. These were of extraordinarily high grade and capable of yielding a large amount of silver in a short time. Their effect on world markets was profound, but it is the nature of such deposits to be impersistent in depth. All the great districts based on such deposits are now

worked out or past their peak production. It is of historical interest to see the effects of the discovery and development of these great camps, and it is important to bear in mind that in looking to the future we must seek new sources.

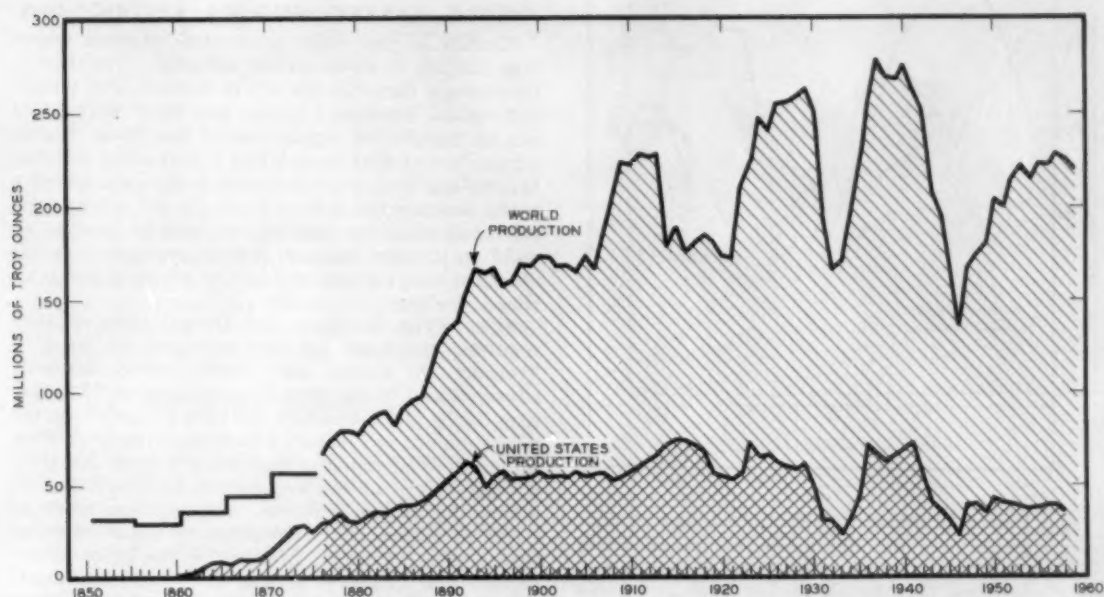

The first of these great discoveries was the Comstock Lode of Nevada in 1859. Because of the extraordinary richness of its ore, the Comstock was developed quickly and reached peak production in the late 1870's. The camp produced about \$350 million in silver and gold, silver having a slightly greater value. Rich as the camp was, its potentialities were hysterically overvalued.¹ Rickard records subsequent events as follows:

In 1871 Germany adopted the gold standard and ceased the minting of silver. In 1873 the United States, by Act of Congress, discontinued the coinage of silver dollars; in the same year Germany provided for the retirement of its silver coins and the sale of the bullion; in 1874 the governments of the Scandinavian countries demonetized silver; in 1875 Holland suspended the minting of silver for private account and established a gold coinage; in 1876 France and Spain did likewise.

The decline in the price of silver was only moderate and probably the substantial sale of demonetized silver was a considerable factor.

In 1878 rich silver ores from the recently discovered camp of Leadville, Colo., and the greatly increased silver production from Bolivia brought up the total output. In its early days Butte, Mont., was primarily a silver producer and in the late 1880's

E. SAMPSON is Professor Emeritus, Department of Geology, Princeton University. Manuscript received Mar. 1, 1960.

Silver production—World and U.S. For the period 1850-1875, world production reported as 5-yr averages.

silver production from this camp and from the recently discovered district of Broken Hill, Australia, produced marked effect. About 1907, production from the newly found district of Cobalt, Ont., augmenting increased production from Peru, swelled the total world output. World production rose to 228 million oz in 1913 until checked by World War I.

A new peak of 261 million oz was reached in 1929 owing to greatly increased production from Mexico. The all-time peak of 278 million oz was attained in 1937, but much of the silver included in the total was from ores in which silver was not the metal of major value. Production has since declined to the present annual rate of about 220 million oz. The days of the great camps which produced ore mainly for silver have passed. The odds today are very long against discovery of new camps such as Comstock, Pachuca, or Cobalt. Future increase in output of silver will be less affected by a moderate increase in price of silver than it will by a corresponding increase in price of the associated base metals—lead and copper.

At present five countries produce 74 pct of the world's silver and four more bring the total up to 88 pct. The 1958 figures, which are the latest available, are given below. Ten additional countries produced more than 1 million oz each:

	Million Ounces	Percent of Total
Mexico	47.6	21.4
U.S.A.	35.7	15.8
Canada	31.9	14.2
U.S.S.R.	25.0	11.1
Peru	24.2	10.7
Australia	15.4	6.8
Japan	8.3	3.7
Bolivia	7.4	3.3
East Germany	4.5	2.0

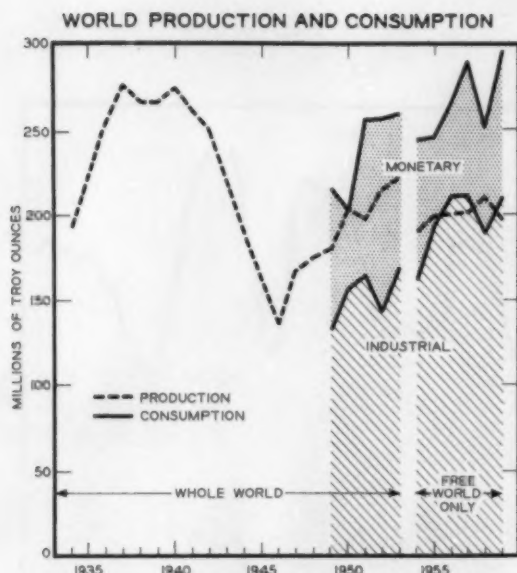

SILVER USAGE

Monetary Use: In many countries monetary silver is in circulation as coins of small denomination, but in the U. S. a large reserve of bullion is also held as security for silver certificates. At the present time the U. S. has in this reserve and in circulation as coinage nearly one quarter of all the silver ever produced (except that which has been dissipated), and this represents about three quarters of the monetary stocks of the world. On Dec. 31, 1959, the U. S. Treasury silver was distributed as follows:

	Million Ounces
Held in Treasury	
Securing silver certificates	
Silver bullion	1741
Silver dollars	141
Subsidiary coin	2
Free silver bullion	175
Total Treasury stocks	2059
Outside the Treasury	
Silver dollars	236
Subsidiary coin	1089
Total silver outside the Treasury	1331
Total silver	3391

No other countries hold supplies of silver, either as coinage or bullion, that are at all comparable to those of the U. S.

To a considerable degree a government's financial soundness can be measured by the amount of silver in circulation as coins. When times are hard, silver coinage may be replaced by paper and the metal melted down and sold. However, public reaction is strong against small fractional paper currency. Western Germany, Austria, and Italy have all gone

Source: Handy & Harman. Note—due to lack of adequate statistics from the Soviet bloc, the period 1954-1959 represents Free World only. Monetary and industrial consumption data for the period 1949 to present are not comparable with statistics of prior years.

back to silver coinage, either to replace base metal or in substitution for paper. France is minting silver coins at a rate estimated to require 13 million oz annually for the next five years. Growing use of vending machines has substantially increased the need for silver coins in the U.S. From 1949 to 1959 the U.S. silver coins in circulation increased 58 pct—from 843 to 1331 million oz. In the non-Soviet World the coinage use represented 31 pct of the world's production of new silver.

Industrial Use: In the past 25 years a very remarkable development has occurred in silver usage. In the mid-1930's most of the industrial use was for silverware and the arts. The special properties of the metal have greatly widened its use. Of all metals, silver is the best conductor of electricity and heat. Also it imparts desirable properties to solders, making them usable with nearly all metals and also capable of withstanding higher temperatures than common solder. In the U.S. about three-quarters of the industrial silver now consumed is for photographic products, solder, and electrical contacts. In addition there is a growing number of industrial uses as well as the age-old use for silverware.

As a result of new industrial demands for silver, world consumption has increased from about 20 million oz in 1934 to more than 200 million oz at the present time. For the 1955-1959 period consumption of silver by industry alone has slightly exceeded world production of new silver, average figures for the Free World consumption being respectively 202 and 203 million oz a year.

With large monetary demands added to industrial requirements, the outlook for the future is truly disturbing. In the non-Soviet world from 1955 through 1959 total use of silver has averaged 69 million oz a year more than production. The supply

that has maintained equilibrium in the silver markets of the world is the Free Silver bullion of the U.S. Treasury.

WORLD MARKETS AND U.S. RESTRICTIONS

London is the only substantial market where free trading in silver exists, although Frankfurt is becoming a factor in the world market. The freight differential between London and New York is 1¢ per oz. Restrictive regulations of the Silver Transactions Act of 1934 have killed U.S. trading in silver futures—as they were intended to do—and ended a really free market in New York. By this act half the profits of all silver transactions become taxable. In addition, the act imposes severe accounting duties on those who are engaged in the smelting and purchase of silver.

The Silver Purchase (or Green) Act of 1946 regulates purchase and sale of silver by the U.S. Treasury. It directs that newly mined domestic silver offered to the Mint be purchased at 90.5¢ per troy ounce and authorizes the sale of silver (at the discretion of the Treasury) from the Treasury's Free Silver stock at not less than 90.5¢ per oz. Actually the act refers to the acquisition of silver and in theory the bullion is minted and payment made in silver as dollars, after deduction of a toll of three tenths as seigniorage. In practice the price is for receipt and delivery at the San Francisco mint. Silver can be shipped from San Francisco to New York by truck for about 0.5¢ per oz.

The silver acquired by the Treasury and used to back all silver certificates is valued on its books at \$1.29. This price was established by act of Congress in 1834 and represents a 16:1 ratio of gold to silver with gold at the pre-1934 price of \$20.67 per oz. This succeeded a 15:1 ratio established by Alexander Hamilton and an act of Congress in 1792. The silver of subsidiary coinage is valued at \$1.38. The price of 90.5¢ is 70 pct of the \$1.29 figure established in 1834. This results in 7 oz out of 10 being assigned to back silver certificates and 3 oz going to the Free Silver stock. Much criticism has been directed at the legislation which requires the purchase of silver at a price above that of the open market as a "subsidy" to the domestic mining industry. From time to time in recent years the open market price has been above the Treasury price and continuously so since March of 1959. The Treasury obtains a 30 pct seigniorage on its silver certificates and a 53 pct seigniorage on the subsidiary coins: halves, quarters, and dimes.

In recent years the Free Silver stock of the U.S. Treasury has become of increasing importance. The great amount of currency and hoarded silver of China and India are gone. Other countries that had substantial amounts of silver currency have withdrawn it and sold most of their silver. For example France, having disposed of most of its silver coinage, with a concurrent great inflation of its currency, is now a buyer of silver. The U.S. Treasury, with about 2100 million oz of silver in reserve in addition to more than 1300 oz in circulation, is the great repository of the world's silver. Of this only the Free Silver stock is readily available to the U.S. market, so that as long as the U.S. Treasury sells at the price of 91¢, it largely controls the world price.

In looking to the future it is important to gage the adequacy of this Free Silver supply. On June 30, 1945, there were 696 million oz in the stock.

From 1943 to through 1946, 411 million oz were released as Lend-Lease to the following:

Lend-Lease Shipments	Million Ounces
India and Pakistan	226.0
United Kingdom	88.1
Netherlands	55.7
Saudi Arabia	23.3
Australia	11.8
Ethiopia	5.4
Belgium	0.3
Fiji	0.3
Total	410.8

Of the original Lend-Lease silver, 1 million oz were lost in shipment, 375 million oz have been repaid, and 35 million oz were outstanding at the end of 1959. From 1954 through 1959 the Free Silver stock shows an increase from 14 to only 175 million oz in spite of the 375 million oz from Lend-Lease repayments. This indicates a deficit of 200 million oz without the returned Lend-Lease silver.

U.S. TREASURY REQUIREMENTS

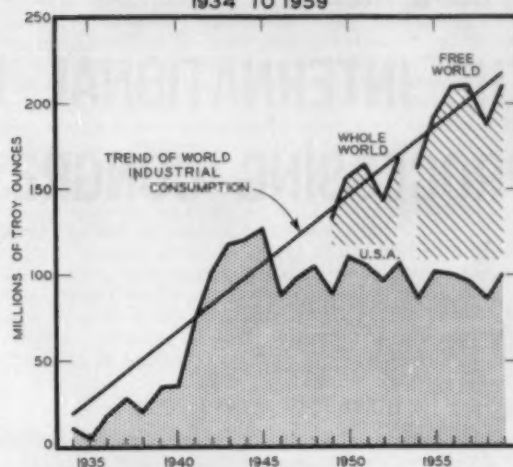

Production of new silver in the U.S., which averaged 38 million oz for the ten-year period 1949-1958 (and in 1959, owing to strikes, was only about 24 million oz), is much less than the Treasury requirements and only comes to the Treasury when the Treasury price is above the world price. The Treasury price for recent months has been below the world price and the flow is out rather than into the Free Silver stock. Coinage consumption for the period 1950-1959 averaged 39 million oz a year, and in addition 21 million oz a year were "allocated to silver securing certificates," making an average total annual Treasury requirement of 60 million oz. Present Free Silver stocks appear only sufficient to meet Treasury requirements for not more than three years before exhaustion, and the supply might well be used up in less than two years. Sales to industrial consumers, substantial in recent months, and made at a price below the world price, simply hasten the day when the supply of Free Silver will be used up. To conserve this supply and to stop sales of Free Silver at a time when domestic production is far less than consumption would be a wise policy.

WORLD SITUATION

In recent years U.S. production of silver has been less than requirements for monetary use of the Treasury. With an industrial consumption averaging 100 million oz a year in addition to the Treasury use, it is clear that domestic production of new silver is far below national requirements.

When the world situation is examined the outlook is disturbing. Free World production for the six-year period 1954-1959 was, in millions of ounces, 200 against an industrial use of 196 and a coinage use of 71 for a total use of 267. This left an average annual deficit for the period of 67 million oz. The only great supply of silver in the world is the U.S. Treasury reserve of "Silver Bullion Securing Certificates," and on June 30, 1959, this stood at 1677 million oz. The writer will not go into the large question of the need for silver backing of U.S. paper currency, a subject on which there are strong differences of opinion, but will point out that this reserve has been entered on the books of the Treasury at \$1.29 per oz and that Congressional authorization would be required for any sale of this metal. It seems highly doubtful that any legislation will be enacted

INDUSTRIAL CONSUMPTION OF SILVER, 1934 TO 1959

Source: Handy & Harman.

that will permit sales at a loss. The problem also arises of conserving a substantial amount of silver as a strategic stockpile. There is no such stockpile other than Treasury monetized silver. Some of the wartime demands on Treasury silver are summed up by Simon D. Strauss:²

When World War II broke out the Treasury held about 2500 million ounces of silver bullion. During the war it lent 411 million ounces to our allies under lend-lease; put 902 million ounces into defense plants as a substitute for copper (thereby saving 40,000 tons of copper); and sold 135 million ounces to industry to be used as directed by the War Production Board. At the end of 1945, the Treasury holdings were only 944 million ounces.

CONCLUSION

It seems clear that with world consumption continuing in excess of production it can not be long before something has to give. A world price higher than the Treasury purchase price of 90.5¢ per oz may be with us for some time. A pressing need for the U.S. silver consumer and producer alike is to get rid of the legislation controlling the purchase and sale of silver by the Treasury as well as the prohibitive Silver Transactions Act and thereby establish a free market in the U.S. If not, then when the Free Silver stock is exhausted, the stabilizing effect of Treasury sales will cease and an explosive price rise could occur because both the Treasury and other consumers will have to go to the open market for their silver. This demand would, of course, stimulate the exploration and possible development of silver deposits by that small group of mining companies that derive a substantial share of their income from silver, there would be a considerable time lag before the silver price would be stabilized again by a better balance between supply and demand. Thus the forecast at present is for a price increase of silver that may become acute.

SPECIAL REPORT ON THE INTERNATIONAL MINERAL PROCESSING CONGRESS

by H. RUSH SPEDDEN

The third International Mineral Processing Congress was held in London in April 1960 under the auspices of the Institution of Mining and Metallurgy. The program, which included papers on both research and practice, was arranged by a committee under the direction of J. E. Denyer, Chairman, and J. H. Watson, IMM President (1959-60). Leaders in this field of technology from all parts of the world participated. The following review is presented in an effort to give the members of the Society of Mining Engineers the highlights of the technical program. The bound volume of the proceedings of the Congress will be available later this year through the Institution of Mining and Metallurgy, 44 Portland Place, London, W.1, England, at £5 (\$14) per copy.

COMMUNITION

R. T. Hukki¹ has extended his study of ball mill grinding at supercritical speeds with an excellent mathematical analysis of tumbling mill grinding. When he speaks of supercritical speeds he is referring to the original Fahrenwald critical-speed formula. He said that, as an example of the use of supercritical speeds, if a fine grinding mill of any type is wet-grinding ore of 3.5 sp gr with steel balls at a certain conventional subcritical speed, the same power input and capacity should be obtainable with autogenous medium of 3.5 sp gr at a speed 100 to 120 pct of the critical in a grate-type mill of the same effective size. In addition, he introduced what he calls the *base mill* concept which, he stated, makes it possible to compare performances of mills of different sizes grinding with a metallic medium or with an autogenous medium of any specific gravity and at any speed. He showed the use of this concept and explained how it makes possible the evaluation of mill sizes and motors for any grinding purpose at any accuracy well within the conventional standards of design in milling practice. He further stated that the maximum capacity in pilot plant mills with various media, either metallic or autogenous, has always been found to be within the supercritical speed range. In his discussion of this paper he substantiated these findings with statements showing the increased capacity

obtained in a milling plant in Finland which followed his principles.

D. Weston's paper² describes the factors which he considers are of importance in the Aerofall grinding system as being: 1) impact crushing combined with compression which is suddenly changed to tension, 2) abrasion grinding by spinning particles, 3) controlled circulation of particles of different masses, 4) controlled particle placement and segregation into zones, and 5) the four-stage classification system. These ideas were challenged, particular emphasis being placed on the concept of a crushing action being brought about in a mill which could produce strong compressive forces followed by a sudden change to tension. This theoretical battle will undoubtedly be continued. In support of the Aerofall system, A. M. Gaudin pointed out that this mill has been highly successful in producing grain boundary comminution, a long-sought mechanism in grinding. He added that the mill accomplishes the comminution with lower steel consumption. These facts were further emphasized by Bengt Fagerberg, reporting on independent tests made in Sweden by the mining company for which he works in cooperation with a research committee of the Swedish Mining Assn. As a result of a careful and detailed experimental program, Fagerberg and Herbert Ornstein³ found that the Aerofall mill gives considerably better liberation than rod mills and is at its best when grinding fairly hard ores from which high-grade concentrates are to be produced. Both wear and power costs can then be kept at a lower level with the autogenous mill than with rod mills. They also state that the selective grinding properties and quick discharge in Aerofall milling give closely

H. R. SPEDDEN, Member AIME, is Director of Research, Union Carbide Ore Co., New York, N. Y. Mr. Spedden, 1960 Chairman of the Minerals Beneficiation Division, was the official representative of AIME at the International Mineral Processing Congress held in London, England.

sized products and high concentration recoveries on separation. Reference was made to test work on Swedish magnetite ores containing about 30 pct Fe. In the discussion, P. H. Falstrom stated that even though he has recognized the advantages of a grind such as produced in an Aerofall mill, he has chosen an autogenous mill of large diameter which can be used either wet or dry. This, he believes, offers greater versatility while gaining most or all the advantages of the type of grind produced in an Aerofall mill and at the same time making possible the use of a wet grinding circuit. D. G. Armstrong⁴ discussed in detail both methods and equipment for conducting grinding tests on a laboratory scale and showed how the results of this system may be extrapolated to commercial practice. P. Westerlund⁵ described a newly designed vertical mill in which grinding is performed by forced attrition. His mill was found to have a capacity six to eight times greater than a conventional horizontal mill of the same size, but the energy requirements per ton were found to be the same as in conventional grinding.

CLASSIFICATION AND THICKENING

Gaudin,⁶ in conjunction with M. C. Fuerstenau, has extended his study of thickening as reported in Vol. 214, Transactions AIME, by using the transviewer, which employs X-ray absorption to evaluate the solid content of suspensions. He suggests that the settling of thick flocculated pulps is a bimodal process equivalent to filtration through both tubes and tubules. Filtration through tubes takes place and is completed at an early stage, while that through tubules continues indefinitely within the experimental range.

Liquid cyclones continue to command considerable attention. D. Bradley,⁷ in his paper on the design and performances of cyclones thickeners, has worked out a series of functions and curves which he claims will assist in the design of cyclone thickeners. This work was based on the use of a cyclone of 1½-in. diam, with dilute slurries of spherical particles. He concludes that there is an optimum vortex finder length for each feed-size distribution and that for applications where excessive quantities of fine material are anticipated, a short vortex finder is required. His work is supplemental to previous reports by D. F. Kelsall, D. A. Dahlstrom, and others. On the other hand, C. G. Peachy⁸ investigated cyclones from 24 to 30-in. diam working at low pressures in the range of eight lb per sq in. He studied these cyclones as classifiers in a tertiary milling circuit. He concludes that under fixed conditions a pulp of a definite viscosity always arrives at the apex of the cyclone and that this pulp contains a definite amount of the finer-sized particles. If the apex is not large enough to allow the passage of the coarser material in addition to the fines, the coarser fractions are forced into the overflow. He stated that the cyclone behaves in fact as if the order of the sizing of particles across the diameter is the reverse of what would be expected; instead of the larger particles being next to the shell and the smaller particles and water near the central axis, the top-priority pulp of -200 mesh and water is next to the shell, forcing the larger particles toward the central axis where a portion can be caught up and transferred to the overflow. Obviously, such conclusions generated considerable discussion among those who have been working with the details of cyclone operation. Peachy's detailed analysis, however, will probably be of value to those who are considering employing low-pressure large-diameter cyclones as classifiers.

D. F. Kelsall and J. A. Holmes⁹ reported on the use of water injection for displacing entrained slimes from cyclone underflows. Their experiments were an attempt to extend some of the ideas, previously propounded by Dahlstrom, into a workable system for use in a closed grinding circuit. By using a cyclone with double

apexes located one above the other and with tangential water injection below the upper apex, they have produced some most interesting and, apparently, quite beneficial results. In their studies with a 24-in. cyclone in a closed-circuit grinding installation treating 22 tph of new feed, they found that they were able to drop the circulating load from 350 pct down to 160 pct, which was accomplished mostly by lowering the amount of -200 mesh recycled to the ball mill from about 8 tph down to slightly less than 2 tph. The efficiency of classification rose from 71 pct without water injection up to 86 pct with water injection. They have applied for patents on their design.

By a theoretical study of the movement of particles in fluids, G. Ferrara¹⁰ concluded that mineral separations might be accomplished by allowing a pulp to flow through a rotating horizontal tube. He verified his concepts in part by experiments with pure mineral fractions of several densities.

FLOTATION RESEARCH

The session on the theoretical aspects of flotation was dominated by the Russians and, by and large, the titles of their papers are descriptive of the scope and direction of the work they are doing. Undoubtedly the mass of work being done in the USSR will further our knowledge of flotation, and we may presume that only time will tell whether an improved technology has justified the effort.

The paper by O. S. Bogdanov et al.¹¹ on kinetics states that the rate of interaction of xanthate with galena, and of copper ions with sphalerite, are in linear relation to the concentration of such ions in solution, provided that the density of the sorption layer constitutes only a fraction of a monolayer. He has also found that, when potassium zinc cyanide is used as a depressant in the presence of secondary copper sulfides, the removal of copper ions is supplemented by the formation of zinc-ion films. This film, which slows down the dissolution of copper sulfides, accounts for the successful separation of galena from secondary copper sulfides and sphalerite.

V. A. Glembotsky¹² has tried another idea for the application of ultrasonics to mineral processing. He has found that he can effectively strip a xanthate collector from galena and pyrite and that the collector, when stripped into solution, will no longer act as a collector for fresh mineral surfaces. He stated that experiments have shown that it is theoretically possible to selectively float chalcocopyrite from galena after treating the bulk concentrate of the two with ultrasonic irradiation. The same is true for a separation of sphalerite from galena and chalcocopyrite from pyrite. He did not, however, give figures for the power consumption nor did he consider the economics of the process. As another approach to the problem, he stated that recently a new method of selective flotation of bulk lead-zinc concentrates has been introduced successfully in the USSR. The method is based on the use of sodium sulfide to desorb the collectors from sulfide surfaces.

I. N. Plaksin,¹³ in presenting a summary of the research under his direction, suggested that reagents (such as alkylaryl sulfonate) which are good collectors for iron oxides might improve flotation results if used jointly with xanthates. He said that experiments have shown that the joint addition of xanthate and one such compound increased mineral recoveries and permitted the recovery of 95 to 96 pct of the sulfides in the froth without resorting to base-metal salt activation. This method worked quite effectively to increase recovery of the iron-containing dark form of sphalerite. Plaksin further described the effect of employing various gases for selective separation of nonsulfide minerals. He has found some significant results as reported in MINING ENGINEERING (March 1959); his current paper presents the theory for this reaction. He believes that dissolved

oxygen in the pulp can be adsorbed onto the surfaces of minerals such as ilmenite and rutile and that this adsorption enhances their flotation by soap-type collectors. If the oxygen is then removed from solution, particularly by blowing nitrogen through it, the titanium minerals will be strongly depressed. Since this effect is not found on zircon, he suggests this as a possible method for selective flotation of titanium minerals from zircon. His postulates require considerably more elaboration, since they appear to conflict with much of the presently accepted theory pertaining to flotation behavior.

V. I. Klassen,¹⁶ reporting on his experiments with flotation by gas precipitation, found that gas will precipitate from solution more readily on a liquid-solid surface than in the bulk of the liquid, and that the more hydrophobic the surface, the easier will be the precipitation. He suggests that large particles can be more readily floated by a multitude of small bubbles on the surface, as produced by gas precipitation. He stated that coal particles from 10 to 15 mm. in size have been floated under laboratory conditions in a cell fed with a super-saturated solution of gases in water. He has also found, as have others, that the use of gas precipitation techniques is particularly applicable to the flotation of -10μ particles. A third advantage claimed for this process is that in normal flotation by the added use of supersaturated water, fine air bubbles will be precipitated on the surface of the collector-coated minerals and that these particles will then attach more easily to pre-formed air bubbles introduced by mechanical means. Klassen briefly described a combined air-lift and mechanically agitated machine used in the USSR to achieve this purpose. This paper should stimulate some additional development work which may lead ultimately to mechanical improvements in the flotation process.

Maurice Rey¹⁷ reported his experiments on differential flotation of lead-zinc ores. He studied several effects, including a comparison of grinding in steel ball mills vs porcelain mills, as well as a comparison of a silicious gangue with a carbonate gangue. The results are probably of interest to someone struggling with a difficult problem of lead-zinc selectivity.

FLOTATION PRACTICE

K. S. Blaskett's paper¹⁸ is a progress report on the use of depressants for gangue minerals when floating fine-grained galena from slates and schists containing abundant sericite and chlorite. He has used many of the typical gangue depressants and has found that in certain cases the effectiveness of these depressants may be enhanced by the addition of sulfur dioxide.

In two papers on ilmenite flotation, by Odd Eidsmo and Olav Mellgren¹⁹ and by U. Runolinn and co-workers,²⁰ the importance of careful conditioning of ilmenite before flotation is emphasized. The Norwegian approach is to condition the ilmenite concentrate at 70 pct solids ahead of each cleaner stage. Both these papers are excellent descriptions of the application of careful test work to operating plants.

J. N. Wilson²¹ described a well-planned plant producing feldspar and mica by selective flotation. The steps employed to prevent overgrinding and to recover minerals as coarse as the degree of liberation allows shows the fine hand of F. B. Michell, to whom Wilson has given credit for his technical guidance.

GRAVITY AND DENSE MEDIA SEPARATION

Two papers, one on a study of the motion of particles in a jig bed²² and another on a study of the operation of shaking tables²³ were reports on experimental studies made in attempts to more fully understand these types of operations.

The Nesbitt and Weavind paper²⁴ on a study of the efficiency of dense media separators used in diamond dressing is most interesting in that it shows that another group has discovered control of media viscosity

is necessary to yield good HMS results. In a South African plant, viscosity control is maintained by the use of a cyclone in the cleaning circuit between the magnetic separator and the densifier. The cyclone operates as a heavy-media unit rejecting coarse silicates into the overflow which are then removed by screening. When necessary, the cyclone underflow is tailed for additional rejection of gangue. By these means, the viscosity in the HMS cone-type vessel is maintained at about 25 centipoises, which appears to be a good operating range for HMS separation. The authors also noted the advantage of Knapsack spherical ferrosilicon medium for making separation at specific gravities above 3.0.

P. Moiset and R. Dartois²⁵ presented a paper on heavy media wherein they describe the development and application of a magnetically controlled underflow discharge valve for cone-type vessels. The sink fraction of the cone discharges through an apex pipe surrounded by a magnetic coil. The magnetic medium is retained in the cone by the field set up at this point and the mineral particles force their way downward through the plug of the medium. The authors claim that this system eliminates much of the violent agitation in the cone caused by the normal air-lift type of sink removal system. The magnetic valve is already in use at two plants in the Belgian Congo, one treating manganese ore and the other diamantiferous gravels. At the diamond plant in Bakwanga, Belgian Congo Republic, the valve is automatically controlled from a central control room assisted by televised transmission.

The lively discussion brought forth by the Cohen and Isherwood paper²⁶ on dense media separation in hydrocyclones was undoubtedly an indication of the continuing interest in this new development. Both the paper and the discussion were attempts to analyze the variables of this system in efforts to improve results. The points emphasized were: 1) the maintenance of a constant feed volume, 2) the use of the correct size of apex orifice, 3) the selection of a vortex finder size large enough to prevent a back pressure, and 4) the control of the viscosity of the medium.

As another approach to heavy-media separation, the Israel Mining Industries has developed a process for deriving tetrabromoethane (TBE) directly from Dead Sea brines and claims to have thus assured a large and reasonably priced supply of this heavy liquid for commercial use. The technical-grade liquid has a specific gravity of 2.94. The authors, A. Baniel and A. Mitzmager,²⁷ envisage industrial heavy liquid separations of minerals in conventional heavy-media vessels and in liquid cyclones. For many separations they have found that pre-treatment of the ore with surface-active reagents makes possible the recovery of the TBE by simple washing and with losses as low as 1 kg of heavy liquid per ton of ore treated. For other applications, naphtha washing is required involving a loss of only 3 kg of naphtha per ton of ore. They state these losses are comparable to the costs of conventional reagents in flotation and dense-media operation. The greatest potential for this material would appear to be in the cyclone application, which operates at a feed size range finer than that possible with a ferrosilicon medium. If the costs can be kept low enough, this may become a significant development in mineral processing for special cases.

Improved treatment methods for Malayan tin ores were described by I. R. M. Chaston.²⁸ By using 24-in. low-pressure cyclones to deslime the feed, a high plant capacity is attained and cassiterite down to as fine as 300 mesh is effectively recovered in jigs.

MAGNETIC AND ELECTRICAL SEPARATION

In the session on magnetic and electrical separation, Fred D. DeVaney's paper²⁹ on new developments in magnetic concentration of iron ores was well received. His description of the newer North American developments in this field created considerable interest. P. G. Kihlstedt³⁰ reported on his work with the Mörtzell-Sala

type of dry magnetic separator, which has already been described in the technical literature. The Mörtzell separator is based on the so-called star magnet with the star formed by permanent magnets of alternating polarity with a field strength normally in the range of 1000 gauss at the surface of the drum.

Improvements in equipment for wet magnetic separation were discussed by G. H. Jones and W. D. Stone.²⁴ The Jones separator is essentially a set of grooved plates magnetized by strong external electromagnets, through which the pulp flows downward. The operation is conducted in cycles and the device has been found effective both on weakly magnetic materials or on very fine particles down to a few microns in size. A pilot model of this separator has been in use in the Mines Branch, Ottawa, since April 1959. As examples, separations of garnet from quartz, ilmenite from apatite, biotite from kyanite, and hematite from quartz were cited. The reception accorded this paper would seem to indicate that we shall hear more of the Jones separator and its application to commercial use. A somewhat similar French development was discussed under the heading of the Forrer separator, a new apparatus for wet separation of weakly paramagnetic materials.²⁵ This device has vertical pole pieces through which the pulp flows, allowing the particles to separate on a horizontal plane according to magnetic response. A splitter at the bottom separates the stream into two fractions. To date this separator appears to have been used primarily on test work of Lorraine iron ores. On a feed sized -35 +65 mesh, the separator gave results almost identical with those produced in a dry, toothed-roll, magnetic separator. The authors stated that the Forrer separator appears to be usable as a pre-concentrator and that they are attempting to work out the few remaining details in design and construction of a machine of commercial size.

The paper presented by Barthelemy and Mora²⁶ discusses high-tension separation as it has been developed in the U.S. In another paper on electrostatic separation, the Russian authors, I. A. Kakovsky and V. I. Revinitzev,²⁷ concluded that the conductivity of minerals is controlled largely by the humidity of the air surrounding them. For minerals with high specific resistance, the authors stated that the conductivity is chiefly determined by surface conductivity, which in turn largely depends on the physical and chemical condition of the surface and amount of water adsorbed on it. Organic heteropolar material adsorbed on the mineral's surface lessens the amount of moisture adsorbed and sharply decreases the mineral's conductivity. This, they said, can be used to advantage in electrostatic separation.

CHEMICAL PROCESSING

In his paper on the production of high-purity lead by amine leaching, F. A. Forward²⁸ reported another one of his excellent research investigations in this new field in extractive metallurgy. The process makes possible the production of silver-free lead with a purity exceeding 99.99+ pct. The Russian paper²⁹ on the development of the autoclave-soda process for the treatment of tungsten concentrates describes in some detail a process that is essentially the same as that now employed by the Union Carbide Nuclear Co. at Bishop, Calif. In addition, the paper contains some information on the use of this process for high-grade scheelite concentrates as well as an unsupported mention that the process may also be applicable to wolframite concentrates. This excellent paper contains a detailed analysis of the chemistry of the process and is a worthy contribution to the technical literature.

A rather complete survey of the uranium ore industry in Australia was presented by the staff of the South Australian Department of Mines.³⁰ The paper makes very enjoyable reading because it describes

in some detail the nature of the ore at the various mines in Australia and shows how variations in the ore control the type of processing required. Leaching, ion exchange, solvent extraction, and solid-liquid separation are discussed. Particular emphasis has been placed on the technical problems encountered and the methods that have been developed to overcome these problems. In another paper on uranium ore treatment, Robert Bodu³¹ discusses the current French trend to use a lime precipitation process in which the sulfuric acid leach liquors are treated by a two-stage addition of lime to first precipitate some of the impurities at about pH 2.7 followed by uranium precipitation at pH 6.5 to 7.0. This uranium pre-concentrate can be further purified either by an alkaline or an acid process followed by solvent extraction. The French have found that their process results in higher extractions and lower costs, brought about chiefly by simplified procedures and the elimination of highly corrosive solutions. The paper contains detailed flowsheets of various French plants as well as operating details.

PROCESS STUDY

A number of processes that have been worked out for a variety of ores or special problems were described in this session. In a paper on the technical possibilities of the fluidized bed roasting process for the concentration of Siegerland siderite, W. Hellmund³² reported that the process is technically suitable for that application. The presentation of a magnetizing roasting method for the beneficiation of Indian manganese ores would appear to be another significant contribution to this field by Subramanya, Narayanan, and co-workers.³³ The authors have shown how high-iron manganese ores may be converted to a mixture of magnetite and manganous oxide (mostly the latter) by gaseous reduction in the temperature range of 400 to 600°C and then beneficiated by magnetic separation. Their pilot plant studies indicate that the process may be used effectively in conjunction with ferromanganese-producing electric furnaces, and that one of its chief benefits might be its ability to produce a feed with controlled composition for electric furnaces.

F. B. Michell³⁴ described in some detail the flotation removal of sulfide minerals from gravity tin concentrates. Other aspects of his work, both in the field of gravity concentration and of table flotation, were brought out during the post-Congress tour to the tin mines of Cornwall. With his assistance, these ancient tin dressing plants are being modernized so that effective recoveries of cassiterite may be made at sizes down to as fine as 10 μ . The Fleming-Robinson paper³⁵ shows how fundamental research, laboratory testing, and pilot plant operation may be integrated for the development of a workable flowsheet on a difficult ore. The present report covers only the process involving magnetic separation, hydrocyclone desliming, and flotation for the recovery of a high-grade apatite from the Sukulu deposit. The authors did not describe the additional steps they have worked out for recovery of pyrochlore from the apatite tailing.

CONTROL AND TESTING

Those refinements which make possible the attainment of optimum operating results were covered in a series of five papers. Type circuits usable for the unit operations of mineral processing were described by M. J. Cahalan and R. Wolski.³⁶ Three papers³⁷⁻³⁹ on the application of mathematical analysis to this field appear to contribute some details to techniques that have already been employed. In addition, L. D. Muller⁴⁰ described the novel laboratory tools he has devised for ore dressing mineralogy. Several of these, including his micropanner (a miniaturized version of the Haultain super-panner, small enough to fit on the stage of a microscope) will undoubtedly become tools of general use in ore-testing laboratories.

PAPERS PRESENTED AT THE INTERNATIONAL MINERAL PROCESSING CONGRESS, APRIL 6-9, 1960

COMMUNITION

- ¹ Fundamental Study of Grinding Characteristics of Tumbling Mills: R. T. Hukki, State Institute for Technical Research, Helsinki, Finland.
- ² Theoretical Concepts of the Aerofall Mill with Illustrations of Plant Practice: D. Weston, Aerofall Mills Ltd., Toronto, Canada.
- ³ Grinding Tests on Magnetite Ores with Aerofall Mill and with Dry and Wet Rod Mills: B. Fagerberg and H. Ornstein, Luossavaara-Kiirunavaara Aktiebolag, Malmberget, Sweden.
- ⁴ Open and Closed Circuit Grinding on a Laboratory Scale: D. G. Armstrong, The General Electric Co., Erith, England.
- ⁵ Preliminary Report on Grinding Tests in a Vertical Laboratory Mill: P. Westerlund, Outokumpu Oy, Masi, Finland.

CLASSIFICATION AND THICKENING

- ⁶ On the Mechanism of Thickening: A. M. Gaudin and M. C. Fuerstenau, Department of Mineral Engineering, Massachusetts Institute of Technology, Cambridge, Mass.
- ⁷ Design and Performance of Cyclone Thickeners: D. Bradley, Chemical Engineering Div., Atomic Energy Research Establishment, Harwell, England.
- ⁸ Distribution of Water in Large-Diameter Cyclones Under Operating Conditions: C. G. Peachey, Chemical and Metallurgical Consultant, Johannesburg, South Africa.
- ⁹ Improvement of Classification Efficiency in Hydraulic Cyclones by Water Injection: D. F. Kelaul, CSIRO, Melbourne, Australia, and J. A. Holmes, Rhokana Corp., Kitwe, Northern Rhodesia.
- ¹⁰ A Process of Centrifugal Separation Using a Rotating Tube: G. Ferrara, Istituto di Arte Mineraria e Preparazione dei Minerali, University of Cagliari (Sardinia), Italy.

FLOTATION RESEARCH

- ¹¹ Kinetics of Flotation Reagent Sorption: O. S. Bogdanov, A. K. Podnek, V. J. Hainman, and N. S. Mikhailova, Institute Mekhanobr, Leningrad, USSR.
- ¹² Physical Stability of Collector Adsorption Layers on Mineral Surfaces and Methods for Their Destruction: V. A. Glembovsky, Laboratory of Flotation and Flotation Reagents, Institute of Mining, Academy of Sciences of the USSR, Moscow.
- ¹³ Study of Superficial Layers of Flotation Reagents on Minerals and the Influence of the Structure of Minerals on Their Interaction with Reagents: I. N. Plaksin, Head, Section of Mineral Dressing of the Institute of Mining, Academy of Sciences of the USSR, Moscow.
- ¹⁴ Kinetic Investigation of the Effect of Contact Time, Temperature and Surface Condition on the Adhesion of Bubbles to Mineral Surfaces: M. A. Epeles and M. L. Volova, Mineral Research Institute, Ministry of Geology and Protection of the Mineral Resources of the USSR.
- ¹⁵ Wetting of Solid in Solutions of Surface-Active Substances as a Function of Solute Concentration: M. Wada, Professor of Mineral Dressing, Tohoku University, Japan.
- ¹⁶ Theoretical Basis of Flotation by Gas Precipitation: V. I. Klassen, Laboratory of Mineral Dressing, Institute of Mining, Academy of Sciences of the USSR, Moscow.
- ¹⁷ On the Interpretation of Contact Angle: J. Leja and G. W. Poling, Department of Mining and Metallurgy, University of Alberta, Canada.
- ¹⁸ Some Factors Affecting Selectivity in the Differential Flotation of Lead-Zinc Ores Particularly in the Presence of Oxidized Lead Minerals: M. Rey, Ecole Nationale Supérieure des Mines, and Société Minière et Métallurgique de Penarroya, Paris; V. Formanek, Minerais et Métaux, Paris, France.

FLOTATION PRACTICE

- ¹⁹ Some Effects of Depressants in the Flotation of a Lead Ore: K. S. Blackett, CSIRO Ore Dressing Investigations, Melbourne, Australia.
- ²⁰ Some Factors Which Influence Ilmenite Flotation at Titania A/S, Norway: O. Eidsmo, Titania A/S, Norway, and O. Mellgren, Royal School of Mines, London, England.
- ²¹ Agglomeration Flotation of Ilmenite Ore: Otanmäki Oy, Finland.
- ²² Flotation of Brown Iron Ores and Slimes From Gravity Treatment of Manganese Ores: Z. S. Bogdanova, S. I. Gorlovsky, and B. M. Lakota, Institute Mekhanobr, Leningrad, USSR.
- ²³ Feldspar-Mica Separation: An Unusual Flotation Flowsheet: J. N. Wilson, Colin Stewart Ltd., Winsford, Cheshire, England.

GRAVITY AND DENSE MEDIA SEPARATION

- ²⁴ A Study of the Motion of Particles in a Jig Bed: G. D. Lill, United Steel Companies Ltd., Research and Development Department, Swindon Laboratories, Rotherham, England; H. G. Smith, Leeds University, England.
- ²⁵ Study of the Operation of Shaking Concentration Tables: R. Kirchberg and W. Berger, Forschungsinstitut für Aufbereitung, Freiberg, Saxony, Eastern Germany.
- ²⁶ Study of Efficiency of Dense Media Separators Used in Diamond Dressing: A. C. Nesbitt and R. G. Weavind, Diamond Research Laboratory, Johannesburg, South Africa.
- ²⁷ Magnetic Regulation of Underflow Discharge of a Dense Media Washing Cone: P. Moiset, Department of Mines, Faculté Polytechnique de Mons, Belgium; R. Dartois, Université du Travail à Charleroi, Belgium.

- ²⁸ Principles of Dense Media Separation in Hydrocyclones: E. Cohen, Department of Mineral Dressing, Royal School of Mines, London, England; R. J. Isherwood, The Iron Ore Co. of Canada, Quebec.
- ²⁹ Developments in the Treatment of Malayan Tin Ores: I. R. M. Chaston, Department of Mines, Research Div., Ipoh, Federation of Malaya.
- ³⁰ Use and Recovery of Tetrabromoethane (TBE) in Mineral Dressing: A. Baniel and A. Mitzmager, Israel Mining Industries, Haifa, Israel.

MAGNETIC AND ELECTRICAL SEPARATION

- ³¹ New Developments in the Magnetic Concentration of Iron Ores: F. D. DeVansy, Pickands Mather & Co., Duluth, Minn.
- ³² Concentration of Magnetite Ores with Dry Magnetic Separators of Mortall-Sala Type: P. G. Kihlstedt and B. Skold, Royal Institute of Technology, Stockholm, Sweden.
- ³³ Magnetizing Reduction in a Recuperative Rotary Furnace: S. Eke-torp, Research Department, Stora Kopparbergs Bergslags Aktiebolag, Domnarvret, Sweden.
- ³⁴ Wet Magnetic Separator for Feebly Magnetic Minerals: I—Description and Theory: G. H. Jones, Department of Mechanical and Electrical Engineering, Camborne School of Metalliferous Mining, Cornwall, England. II—Application to some Canadian Mineral Dressing Problems: W. J. D. Stone, Department of Mines and Technical Surveys, Mineral Processing Div., Ottawa, Canada.
- ³⁵ The Forrer Separator: A New Apparatus for Wet Separation of Weakly Paramagnetic Materials: J. DeRobert and L. Camabet, Institut de Recherches de la Sidérurgie, Maizières-les-Metz, Moselle, France.
- ³⁶ Electrical High Tension Minerals Beneficiation: Principles and Technical Aspects: R. E. Barthelemy, Consulting Engineer, Jacksonville, Fla.; R. G. Mora, Institut de Recherches de la Sidérurgie, Maizières-les-Metz, Moselle, France.
- ³⁷ Effects of Surface Conditioning on the Electrostatic Separation of Minerals of Low Conductivity: I. A. Kukovsky, Ural Polytechnic Institute, and V. I. Revnivtsev, Research Institute Uralmekhanobr, Sverdlovsk, USSR.
- ³⁸ An Optical Method of Separating Diamonds from Opaque Gravels: A. A. Linari-Linholm, Diamond Research Laboratory, Johannesburg, South Africa.

CHEMICAL PROCESSING

- ³⁹ Production of High Purity Lead by Amine Leaching: F. A. Forward, Department of Mining and Metallurgy, University of British Columbia, Canada; H. Veltman and A. Vizsolyi, Sherritt Gordon Mines Ltd., Canada.
- ⁴⁰ Development of the Autoclave-Soda Process for the Treatment of Tungsten Concentrates: N. Maslitsky and P. M. Perlov, Institute Mekhanobr, Leningrad, USSR.
- ⁴¹ Pressure Leaching of Some Silicate Minerals in Alkali Solutions: A. R. Burkin, Department of Mineral Dressing, Royal School of Mines, London, England.
- ⁴² Technical Aspects of Uranium Ore Treatment in Australia: Staff of the Research and Development Branch, South Australian Department of Mines, Adelaide, Australia.
- ⁴³ Recent Development in the Chemical Treatment of Uranium Ores in France: R. Boda, Research and Mineral Exploitation Branch, Atomic Energy Commission, France.

PROCESS STUDY

- ⁴⁴ Technical Possibilities of the Fluidized Bed Roasting Process for the Concentration of Siegerland Siderite: W. Hellmund, Erzbergbau Siegerland A.G., Betzdorf, Western Germany.
- ⁴⁵ Beneficiation of Low-Grade Manganese Ores, with Particular Reference to Semi-Pilot-Plant Studies on a Low-Temperature Magnetizing Reduction Process for Ferruginous Manganese Ores: G. V. Subramanya and P. I. A. Narayanan, National Metallurgical Laboratory, Jamshedpur, India.
- ⁴⁶ Application of Flotation in the Clean-Up of Gravity Tin Concentrates: F. B. Michell, Camborne School of Metalliferous Mining, Cornwall, England.
- ⁴⁷ Development of a Process for the Concentration of Sukulu Apatite: M. G. Fleming, Royal School of Mines London; A. J. Robinson, Warren Spring Laboratory, Stevenage, England.

CONTROL AND TESTING

- ⁴⁸ Automatic Control in Mineral Processing: M. J. Cahalan, Rio Tinto Management Services (U.K.) Ltd; R. Woiski, Systems Study Group, Elliott Bros. Ltd, London, England.
- ⁴⁹ Separation Factor Analysis for Mineral Dressing Processes: M. Digre, Mineral Dressing Laboratory, Institute of Technology, Trondheim, Norway.
- ⁵⁰ Statistical Analysis of Some Variables in Batch Flotation Testing, Leading to the Design of an Improved Laboratory Cell: P. Raffinot, Minerais et Métaux, Paris, France.
- ⁵¹ Linear Assessment of Flotation Results: W. H. Andrews, The Zinc Corp., Broken Hill, Australia.
- ⁵² Some Laboratory Techniques Developed for Ore Dressing Mineralogy: L. D. Muller, Warren Spring Laboratory, Stevenage, England.

MINING ENGINEERING presents the annual membership report
of the Society of Mining Engineers; see page 689.

1960 Membership Directory

society of mining engineers of aime

Don't risk mining failure!

**Make confident decisions
with the help of reliable**

DENVER ORE TEST SERVICE

When the risk of mining success or failure depends on your decision... depend on the reliable information from DENVER Ore Tests.

DENVER Ore Tests supply facts which help you to make confident decisions on the profitability of your proposed mining operation... or the expansion of your present facilities. Use them, as many companies do, to verify the findings of your own engineers. DENVER Ore Tests have a world-wide reputation for dependability. They are internationally recognized and respected by investors, bankers, government and mining leaders for accuracy and reliability.

Why gamble on your mining investments

...when you can be sure of your decision with data provided by reliable DENVER Ore Tests.

Write, giving details of your problems for a complete recommendation.

Preliminary Investigation

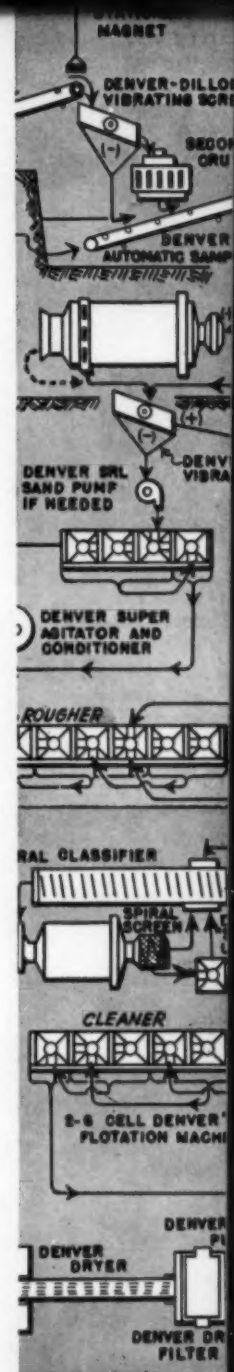

Crushing and Grinding Tests

Concentration and Flotation Tests

DENVER Ore Test Service is a complete service... with special emphasis on problems of crushing and grinding, settling and concentration. It includes flowsheet development, mill design, construction drawings and supervision, start up service and complete follow-through. Why not use DENVER'S experience?

"The firm that makes its friends happier, healthier and wealthier"

SME Membership Directory

Listings and addresses are correct as of Apr. 15, 1960

Officers Directory on page 680B

EXPLANATION OF CODING

Alphabetic Section (Page 689):

The letter immediately following the member's name indicates grade: **M**—Member, **A**—Associate, **J**—Junior.

The numerals following member's grade indicate year of election.

The letter following year of election indicates primary Divisional affiliation:

A—Mining & Exploration

B—Minerals Beneficiation

C—Iron and Steel

D—Extractive Metallurgy

E—Institute of Metals

F—Coal

G—Petroleum

H—Industrial Minerals

J—Council of Education

K—Council of Economics

Geographic Section (Page 799):

The asterisk (*) preceding the member's name indicates availability for consulting work.

Possession of this Directory does not include the privilege of using it for circularization purposes. It is published for the use of members of the Institute, SME, educational institutions, and public libraries as a reference book.

SOCIETY OF MINING ENGINEERS OF AIME

Established as a Society February 26, 1937

OFFICERS AND COMMITTEES

A. B. Cummins, *President*
James C. Gray, *President-Elect*
J. W. Woomey, *Past President*
C. E. Lawall, *Eastern Regional Vice-President*
Donald W. Scott, *Central Regional Vice-President*
H. C. Weed, *Western Regional Vice-President*
Nathaniel Arbiter, *Treasurer*

John Cameron Fox, *Secretary*
AIME 29 W. 39 St.
New York 18, N. Y.

D. R. Tone, *Assistant Secretary*

- Board of Directors: (1961)* Carl T. Hayden, (Coal)
R. B. Ladoo, (Industrial Minerals)
Norman L. Weiss, (Minerals Beneficiation)
Brower Dellinger, (Mining & Exploration)
W. W. Simmons, (Mining & Exploration)
- (1962) H. Eugene Mauck, (Coal)
John G. Broughton, (Industrial Minerals)
Wm. B. Stephenson, (Minerals Beneficiation)
Ewald Kipp, (Mining & Exploration)
Sherwin F. Kelly, (Mining & Exploration)
- (1963) Ernest M. Spokes, (Coal)
Sandford S. Cole, (Industrial Minerals)
Nathaniel Arbiter, (Minerals Beneficiation)
Charles F. Park, Jr., (Mining & Exploration)
Raymond D. Satterley, (Mining & Exploration)

Committees

Executive and Finance: A. B. Cummins, *President*; Nathaniel Arbiter, *Treasurer*; J. W. Woomey, James C. Gray, C. E. Lawall.

Nominating: Wayne L. Dowdey, *Chairman*; (Coal) C. T. Holland; G. R. Spindler, *Alternate*; David R. Mitchell; D. L. McElroy, *Alternate*; (Industrial Minerals) D. R. Irving; J. B. Graham, *Alternate*; M. L. Leonardi; V. W. Scheid, *Alternate*; (Minerals Beneficiation) Nathaniel Arbiter; Neil Plummer, *Alternate*; Wayne L. Dowdey; Stephen E. Erickson, *Alternate*; (Mining & Exploration) W. W. Simmons; T. N. Walthier, *Alternate*; S. K. Droubay; Glen A. Burt, *Alternate*; W. Al Pakkala; R. W. Marsden, *Alternate*; H. LeRoy Scharon; S. H. Ward, *Alternate*.
Ex Officio Members: A. B. Cummins, *SME President*; J. W. Woomey, *SME Past President*.

Program: E. M. Spokes, *Chairman*; (Coal) James D. Reilly; (Industrial Minerals) Richard J. Lund; (Minerals Beneficiation) Neil Plummer; (Mining & Exploration) J. M. Ehrhorn, David R. Mitchell, E. R. Palowitch, John Peperakis, Drury A. Pifer, T. S. Spicer, Ernest M. Spokes.

Admissions: Sandford S. Cole, *Chairman*; Frank Ayer, *Vice-Chairman*; (Coal) Chas. H. Lambur, W. J. Rude; (Industrial Minerals) Mrs. Pauline Moyd, Jack B. Graham; (Minerals Beneficiation) Robert H. Ramsey, F. Wm. Bloecher, Jr.; (Mining & Exploration) Frank Ayer, Alfred D. Rood.

Membership: M. Dean LaGrange, Jr., *Chairman*; John H. Jett, *Asst. Chairman*; Ewald Kipp, *Contact Councillor*; (Coal) Fred R. Toothman; (Industrial Minerals) G. Donald Emigh; (Minerals Beneficiation) D. A. Dahlstrom; (Mining & Exploration) Peter Joralemon.

Editorial Board: Brower Dellinger, *Chairman*; N. L. Weiss; R. D. Satterley; Nathaniel Arbiter; R. A. Beals, "Mining Engineering"; Thomas C. Orme, *Eastern Advertising Manager*; John C. Fox, *Secretary*.

General Editorial: Brower Dellinger, *Chairman*; (Coal) M. D. Cooper; (Industrial Minerals) Richard H. Jahns; (Minerals Beneficiation) Donald A. Dahlstrom; (Mining & Exploration) J. W. Chandler; R. A. Beals, "Mining Engineering".

Transactions Editorial: Norman L. Weiss, *Chairman*; (Coal) G. R. Spindler; (Industrial Minerals) Donald R. Irving; (Minerals Beneficiation) Bunting S. Crocker; (Mining & Exploration) John C. Wangaard; R. A. Beals, "Mining Engineering".

Mineral Economics: John D. Ridge, *Chairman*; (Coal) E. J. Sandy; (Industrial Minerals) G. W. Josephson; (Minerals Beneficiation) M. D. Hassalis; (Mining & Exploration) Evan Just; Bruce C. Netschert, *Program Chairman*.

Education: Truman H. Kuhn, *Chairman*
Term Ending '61: (Coal) R. T. Gallagher; (Industrial Minerals) Joseph A. Pask; (Minerals Beneficiation) P. L. deBruyn; (Mining & Exploration) Roland B. Mulchay.

Term Ending '62: (Coal) G. R. Spindler; (Industrial Minerals) Vernon E. Scheid; (Minerals Beneficiation) William Van Slyke, Jr.; (Mining & Exploration) Truman H. Kuhn.

Term Ending '63: (Coal) George L. Judy; (Industrial Minerals) J. E. Monroe; (Minerals Beneficiation) T. M. Morris; (Mining & Exploration) Willard C. Lacy.

COAL DIVISION

Established as a Division September 20, 1929

H. O. Zimmerman, Chairman
W. C. McCulloch, Chairman-elect

George E. Keller, Secretary-Treasurer
Manager, Coal Evaluation
United States Steel Corporation
Room 3418, 525 William Penn Place
Pittsburgh 30, Pennsylvania

Executive: (Consists of the Officers, Chairmen of Committees, three Past Chairmen, and nine elected members). **Past Chairmen:** C. T. Holland, J. W. Woomer, R. E. Salvati. **Elected Members:** Clayton G. Ball, Edward G. Fox, E. Minor Pace, R. Glenn Lazzell, Henry C. Rose, Robert vonStorch, Howard A. Herder, John L. Schroder, Jr., H. F. Yancey.

Membership: Fred R. Toothman, Chairman; James A. Hagy, Vice-Chairman; Arthur Bradbury, C. M. Donahue, Wm. H. Ginder, A. F. Hutcheson, H. E. Mauck, John Peparakis, S. P. Polack, R. H. Swallow, George C. Trevorrow, W. A. Weimer.

Program: James D. Reilly, Chairman; A. P. Massman, Vice-Chairman; A. W. Asman, Arthur E. Belton, George B. Clark, H. B. Charnbury, Edward A. Dines, Robert T. Gallagher, James R. Garvey, H. J. Hager, J. Richard Lucas, L. J. Parkinson, John L. Schroder, Jr., Carl Shelton, Jr., Fred D. Wright, D. A. Zegeer.

Publications: G. R. Spindler, Chairman; James A. Younkins, Jr., Vice-Chairman; A. J. Breitenstein, D. H. Davis, C. A. Gibbons, James A. Hagy, E. Minor Pace, E. R. Palowitch, Carl Shelton, Jr., G. A. Shoemaker.

MINING: Ernest M. Spokes, Chairman; J. Richard Lucas, Vice-Chairman.

Subcommittees:

Anthracite Mining Methods: Donald Markie, Jr., Chairman; John W. Buch, Vice-Chairman; Donald B. Dick, Earl W. Lamb, John F. McCall, W. H. Moore, W. B. Petzold, F. S. Sanders, Ivor L. Williams.

Bituminous Mining Methods: Jesse F. Core, Chairman; George W. McCaa, Vice-Chairman; Stephen Krickovic, Moss Patterson, Harry M. Tibbs, C. B. Tillson, Jr., George C. Trevorrow, Jr., J. A. Bottomley, Robert L. Frantz, T. G. Gerow, James A. Hagy, R. G. Lazzell, E. Minor Pace, Carl Shelton, Jr., William J. Skewes, Edward Thomas, David A. Zegeer.

Maintenance: V. D. Hanson, Chairman; D. C. Ridenour, Vice-Chairman; R. J. Bowen, A. W. Calder, George L. Judy, Stephen Krickovic, C. L. Sarff, R. W. Storey, W. G. Taiman.

Safety and Ventilation: J. B. Benson, Chairman; R. Ward Stahl, Vice-Chairman; S. H. Ash, Howard L. Hartman, J. A. Kalasky, Earl R. Maize, J. S. Malesky, John W. Pero, Frank J. Peterzell, M. E. Prunty, Wayne D. Snell, Irvin C. Spotte, Everett M. White.

PREPARATION: Donald Dahlstrom, Chairman; J. J. Reilly Vice-Chairman.

Subcommittees:

Coal Processing: Paul L. Richards, Chairman; J. M. Vonfeld, Vice-Chairman; William M. Bertholf, E. F. Burch, Wm. P. Connelly, Edward G. Fox, III, Max R. Geer, John Griffen, Richard E. Joslin, Robert Llewellyn, Albert P. Massman, W. L. McMorris, III, C. W. Porterfield, W. S. Springer, C. S. Westerberg.

Development and Plant Design: Frank R. Zachar, Chairman; F. P. Calhoun, Vice-Chairman; Donald H. Dowlin, J. W. Andrews, Jr., J. W. Apotheker, William Benson, Byron M. Bird, Laning Dress, William Foreman, Thomas McNally, Edward Lee Mills, J. D. Price, J. D. Wender, R. E. Zimmerman.

Solid-Fluid Separation: Martial P. Corriveau, Chairman; Eugene R. Palowitch, Vice-Chairman; Lewis Arabia, Melvin C. Chang, H. B. Charnbury, Elmer H. Citron, Max R. Geer, Andrew E. Hamlet, Thomas Linton, W. C. McCulloch, Earl R. McMillan, James J. Merle, Frank M. Stephens, Jr., S. C. Sun, Harry L. Washburn.

UTILIZATION: C. F. Hardy, Chairman; James R. Garvey, Vice-Chairman.

Subcommittees:

Air and Water Pollution: H. F. Hebley, Chairman; Ernst P. Hall, Vice-Chairman; R. Emmet Doherty, Richard B. Engdahl, L. C. McCabe, William L. McMorris, Jr., William H. Roll.

Carbonization and Gasification: A. H. Brisse, Chairman; John T. Peters, Vice-Chairman; Don C. Coleman, Joseph A. Corgan, Joseph D. Doherty, Carl E. Lesher, John Mitchell, Louis L. Newman, Joseph Pursglove, Jr., Robert J. Day, E. E. Donath, C. L. Potter, Jon D. Price.

Underground Gasification of Coal: Milton Fies, Chairman; Fred T. Agthe, Joseph D. Doherty, J. D. Forrester, Charles T. Holland, Erich Sarapu, T. Reed Scollon.

Combustion: T. S. Spicer, Chairman; Howard A. Herder, Vice-Chairman; William Bradbury, James W. Eckerd, R. J. Grace, James W. Peters, Max A. Tuttle.

Research and Development: C. L. Potter, Chairman; Harold W. Jackman, Vice-Chairman; William L. Crenitz, Gerard C. Gambs, R. J. Grace, H. H. Lowry, Lawrence D. Schmidt.

Materials Handling: J. P. Blair, Chairman; Herbert E. Steinman, Jr., Vice-Chairman; A. W. Asman, John T. Crawford, William Hanson, J. H. Herb, H. A. Jones, Robert L. Llewellyn, F. M. Morris, W. F. Roberts, R. H. Swallow, R. M. von Storch.

Percy Nicholas Award: Richard B. Engdahl, '60 ASME, Chairman; Harold B. Wickey, '61, AIME; Melvin L. Jones, '62, ASME; Stephen Krickovic, '63, AIME; G. W. Land, '64 ASME.

Nominating: H. O. Zimmerman, Chairman; R. E. Salvati, J. W. Woomer, C. T. Holland, G. E. Keller.

Joint Solid Fuels Conference Planning: Julian E. Tobey, '60 AIME, Chairman; M. D. Engle, '60 ASME; Fred R. Toothman, '61 AIME; H. Vaughan Mansfield, '61 ASME; Ernst P. Hall, '62 AIME; H. Long, '62 ASME.

Annual Field Meeting: Edward G. Fox, Chairman; W. J. Skewes, Vice-Chairman; Clayton G. Ball, J. A. Hagy, E. Minor Pace, Stephen Krickovic, F. M. Mottis.

Scholarship Selection: Charles E. Lawall, Chairman; M. D. Cooper, Vice-Chairman; Edward A. Dines, Charles T. Holland, R. T. Gallagher, G. Ralph Spindler, Ernest M. Spokes.

Scholarship Fund: Hugo C. Nyquist, Chairman; Ralph E. Kirk, E. B. Nelson, E. R. Price, James A. Younkens, Jr.

Society of Mining Engineers of AIME Board of Directors: Carl T. Hayden, H. Eugene Mauck, Ernest M. Spokes.

Society of Mining Engineering of AIME Nominating Committee: C. T. Holland, Member; G. Ralph Spindler, Alternate; David R. Mitchell, Member; D. L. McElroy, Alternate.

INDUSTRIAL MINERALS DIVISION

Established as a Division March 13, 1935

R. H. Feierabend, Chairman
 T. E. Gillingham, Jr., Northeast Vice-Chairman
 W. A. Riggs, Southeast Vice-Chairman
 C. F. Clausen, Mid-Continent Vice-Chairman
 R. H. Wilpoit, Rocky Mountain Vice-Chairman
 J. K. Brooke, Pacific Southwest Vice-Chairman
 Leslie C. Richards, Pacific Northwest Chairman
 V. A. Haw, Canadian Vice-Chairman

J. S. Holland, Sec'y.-Treas.
 National Lead Company
 Mining Department
 111 Broadway
 New York 6, New York

Committees

Executive: R. H. Feierabend, Chairman; John S. Holland, Sec'y.-Treas.; John G. Broughton, Seven Vice-Chairmen of Division, 1961—G. Donald Emigh, F. H. Hunter, D. M. Larrabee, 1962—Thos. E. Gillingham, Jr., Lauren A. Wright, John B. Patton, 1963—Leon W. Dupuy, R. F. Brooks, Pauline Moyd (Mrs. L.).

Nominating: John G. Broughton, Chairman; R. M. Grogan, Thomas L. Kesler, R. B. Ladoo, Sanford S. Cole.

Program: Richard J. Lund, Chairman; Phil Blazovic, Jr., James L. Calver, Charles E. Golson, Raphael G. Kazmann, H. L. King, Jr., George C. Lindsay, Robert J. Wright, W. M. Zilbersher.

Membership: G. Donald Emigh, Chairman; Phil Blazovic, Jr., James L. Calver, Charles E. Golson, Raphael G. Kazmann, H. L. King, Jr., George C. Lindsay, Robert J. Wright, W. M. Zilbersher.

Division Publications: Donald R. Irving, Chairman; Wallace D. Barlow, Richard H. Jahns, H. I. Smith, Richard W. Smith, Paul M. Tyler.

Commodity:

Cement, Lime and Gypsum: George C. Lindsay, Chairman; Edward H. Baxa, H. A. Corre, K. R. Eckrote, Paul Hedley, E. W. Porter.

Ceramic Raw Materials: Phil Blazovic, Jr., Chairman.

Chemical Raw Materials: W. M. Zilbersher, Chairman; James C. Bradbury, Robert Drury, Leon E. Read, William A. Riggs.

Fillers, Fibers And Pigments: H. L. King, Chairman; F. G. Kuehl, J. E. Lamar, C. W. Merrill, M. J. Messel.

Industrial Waters: Raphael G. Kazmann, Chairman; Keith E. Anderson, William F. Guyton, G. Burke Maxey, Wilbur T. Stuart.

Mineral Aggregates: Charles E. Golson, Chairman; E. W. Bauman, H. A. Corre, H. J. Schwellenbach.

Rare and Radioactive Minerals: Robert J. Wright, Chairman; Earl F. Cook, Ray E. Gilbert, E. Wm. Heinrich, Warren R. Wagner, Judson H. Whitman.

Special Sands and Abrasives: James C. Calver, Chairman; R. V. Lincoln, Roland Dane Parks, Arnold H. Tanzer.

Hal Williams Hardings Award Committee: M. F. Goudge, 1960-61 Chairman; B. F. Buie, '61; A. B. Cummins, '62; R. H. Jahns, '63; T. L. Kesler, '63; J. B. Patton, '63; R. M. Foote, '64; R. J. Lund, '64; R. H. Feierabend, ex officio.

MINERALS BENEFICIATION DIVISION

Established as a Division February 16, 1948

H. Rush Spedden, Chairman
Neil Plummer, Associate Chairman
Stephen E. Erickson, First Regional Vice-Chairman
D. A. Dahlstrom, Second Regional Vice-Chairman

Wm. T. Marston, Secretary-Treasurer
Dorr-Oliver, Inc.
77 Havermeyer Lane
Stamford, Connecticut

Committees

Executive: H. Rush Spedden, Chairman; Wm. T. Marston, Sec'y.-Treas.; Neil Plummer; Stephen E. Erickson; D. A. Dahlstrom; Wayne L. Dowdey; Bunting S. Crocker.

General: H. Rush Spedden, Chairman; Neil Plummer, Vice-Chairman; Stephen E. Erickson; D. A. Dahlstrom; Wm. T. Marston; Bunting S. Crocker; Wayne L. Dowdey; P. L. deBruyn; T. M. Morris; E. C. Tveter; F. T. Davis; Donald G. Ashe; Frank J. Windolph; H. E. Uhland; Albert A. Wallach; Clyde E. Osborn; Harold E. Rowen.

Nominating: Will Mitchell, Jr., Chairman; Norman L. Weiss; Wm. B. Stephenson; Nathaniel Arbiter; Wayne L. Dowdey; H. Rush Spedden; Neil Plummer.

Program: Neil Plummer, Chairman; Donald G. Ashe; Harold E. Rowen; F. T. Davis; E. C. Tveter; P. L. deBruyn; H. E. Uhland; Clyde E. Osborn; Albert A. Wallach; Frank J. Windolph.

Papers & Publications: Bunting S. Crocker, Chairman; Nathaniel Arbiter; F. M. Lewis; Fred C. Bond; Elliott J. Roberts; S. R. B. Cooke; Oscar F. Tangel; Donald A. Dahlstrom; Norman L. Weiss.

Education: T. M. Morris, Chairman; D. W. Fuerstenau; Francis L. Holderreed; Frank M. Lewis.

Membership: D. A. Dahlstrom, Chairman.

Technical Committees:

Basic Science: P. L. deBruyn, Chairman; R. J. Charles, Vice-Chairman; D. W. Fuerstenau; Samuel Korman; R. A. Orlani.

Chemical Processing: F. T. Davis, Chairman; S. Power Warren, Vice-Chairman; Robert W. Hernlund; Nathan M. Levine; Victor E. Padilla.

Concentration: E. C. Tveter, Chairman; John R. Moore, Vice-Chairman; W. P. Dyrenforth; A. W. Last; B. C. Mariacher.

Crushing & Grinding: Frank J. Windolph, Chairman; J. H. Brown, Vice-Chairman; A. S. Henderson; F. M. Howell; R. S. Shoemaker; Arnold Souder.

Materials Handling: Donald G. Ashe, Chairman; D. O. Carlson, Vice-Chairman; W. N. Brown; J. C. Loving; L. O. Millard.

Mill Design: A. A. Wallach, Chairman; E. J. O'Connell, Vice-Chairman; R. L. Druva; J. F. Henderson; G. L. Way.

Operating Control: H. E. Uhland, Chairman; James E. Lawver, Vice-Chairman; Blair T. Burwell, Jr.; W. L. Payne, Jr.

Pyrolysis & Agglomeration: Harold E. Rowen, Chairman; W. F. Stowasser, Jr., Vice-Chairman; Robert E. Brandt; L. A. Creglow; Monroe Lanier; Roger D. Lopez; Robert T. Sanden; R. S. Shoemaker.

Solid Fluid Separation: Clyde E. Osborn, Chairman; Dale C. Matthews, Vice-Chairman; W. F. Dyrenforth; Joseph G. Felder; Nathan M. Levine; W. Clark Mason; Robert B. Thompson.

Richards Award: Hugo Johnson, '61, Chairman; H. L. McNeill, '61; W. B. Stephenson, '62; B. J. Larpenteur, '62; D. A. Dahlstrom, '63; F. D. DeVaney, '63; Wayne L. Dowdey, '64; B. H. Clemmons, '64; H. Rush Spedden, ex officio.

MINING AND EXPLORATION DIVISION

Established as Mining, Geology and Geophysics Division, Sept. 27, 1949
Name changed February 19, 1953

Robert J. Lacy, Chairman
John G. Hall, Assistant Chairman
Vice-Chairmen: Peter Joralemon, Membership
J. M. Ehrhorn, Program
John C. Wangaard, Publications

A. W. Ness, Secretary
American Smelting & Refining Co.
600 Crandall Building
Salt Lake City 1, Utah

Editor, *Rock-in-the-Box*: John W. Chandler.

Committees

Executive: R. J. Lacy, Chairman; John G. Hall, J. M. Ehrhorn, A. W. Ness, Roger H. McConnell, Hugo J. Leach, J. C. Wangaard, Peter Joralemon, F. C. Canney, W. H. Westphal, Richard M. Stewart, Lyman H. Hart.

Nominating: Lyman H. Hart, Chairman; F. F. Clark, R. W. Marsden, Stanley H. Ward, J. B. Knaebel, S. K. Droubay, C. E. Nelson, Robert H. Carpenter.

Pesie Award: No Award to be made in February 1961.

Jackling Award: R. J. Lacy, Chairman; Lyman H. Hart, John G. Hall, F. C. Canney, John B. Knaebel, Howard A. Wilmeth, F. S. Turneaure, Richard MacIin Stewart, S. S. Arentz, Jr.

Unit Committees:

Geochemists: F. C. Canney, Chairman.
Membership—P. A. Meyer, Jr.
Program—Douglas R. Cook.
Publications—Lyman C. Huff.

Geology: Roger H. McConnell, Chairman.
Membership—
Program—Herbert E. Harper.
Publications—Earl Cook.

Geophysics: Warren H. Westphal, Chairman.
Membership—Ross W. Whipple.
Program—Don A. Hansen.
Publications—William C. Kellogg.

Open Pit Mining: Hugh J. Leach, Chairman.
Membership—Clarence Sleeman.
Program—Marvin E. Johnson.
Publications—Eugene Pfeleider.

Underground Mining: Richard M. Stewart, Chairman.
Membership—John M. Petty.
Program—John J. Reed.
Publications—Stewart W. Hurlbut.

AIME 1960 OFFICERS AND DIRECTORS

President and Director

*JOSEPH L. GILLSON, '62, Wilmington, Del.

Past President and Director

*HOWARD C. PYLE, '61, Los Angeles, Calif.

President-elect and Director

*R. R. McNAUGHTON, '63, Trail, B.C., Canada

Vice-Presidents and Directors

*JOHN CHIPMAN, '62, Cambridge, Mass.
*JOHN P. HAMMOND, '61, Tulsa, Oklahoma
*WALTER R. HIBBARD, JR., '61, Schenectady, N.Y.
*BASIL P. KANTZER, '61, Los Angeles, Calif.
*S. D. MICHAELSON, '61, Salt Lake City, Utah
*J. W. WOOMEY, '62, Pittsburgh, Pa.

Directors

J. B. AUSTIN, '63, Pittsburgh, Pa.
HERBERT F. BEARDMORE, '63, Houston, Texas
JOHN S. BELL, '62, Houston, Texas
RICHARD C. COLE, '61, Salt Lake City, Utah
A. B. CUMMINS, '62, Manville, N. J.
R. H. FEIERABEND, '63, New Orleans, La.
JAMES C. GRAY, '63, Pittsburgh, Pa.
WAYNE E. GLENN, '62, Houston, Texas
ELMER A. JONES, '61, Bonne Terre, Mo.
EARL M. KIPP, '63, San Francisco, Calif.
C. C. LONG, '62, Monaco, Pa.
J. S. SMART, JR., '63, New York, N. Y.

Director and Treasurer

GEORGE I. BRIGDEN, New York, N. Y.

Secretary

ERNEST KIRKENDALL

AIME

29 West 39th Street
New York 18, N. Y.

Assistant Secretaries

Joe B. Alford
6300 N. Central Expressway
Dallas 6, Texas

H. Newell Appleton
AIME, New York

John C. Fox
AIME, New York

Clifford J. Hicks
707 Newhouse Building
Salt Lake City 11, Utah

R. W. Shearman
AIME, New York

Assistant Treasurer

John F. Lynch
AIME, New York

Counsel

Bannister, Stitt, Holloway & Krause
342 Madison Avenue
New York 17, N. Y.

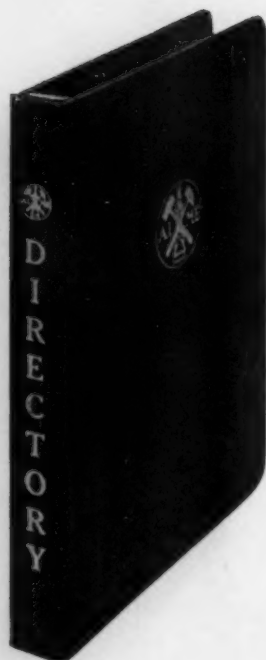

*Terms of Officers are for one year only; terms as Directors expire in February of year indicated.

AVAILABLE NOW

This handsome binder for

YOUR AIME DIRECTORY

Holds the Three Sections

We now have this sturdily constructed binder in stock to hold your AIME Directory sections. The Directories of the other two societies are available and the binder is made to hold the three sections in one handy unit.

You will be proud to own and display this book in your home or on your office desk. It's handsomely bound in dark red pebbled Fabrikoid with the AIME seal and "Directory" embossed in gold.

Your copies of the Directories will be preserved during the year—no looking for back copies of the magazine, no dirty, torn, or frayed Directory sections—and the binder will be usable for years to come, holding each year's revised Membership Directories. The three sections will be held neatly, securely, but easily removable.

The binder alone costs only \$2.50 and we pay all postage and handling charges. Members may ask to be billed.

You can order the complete package for \$5.00 which includes the binder and all three Society Directories.

Be sure that you get your AIME Directory Binder from the first shipment, now in stock. Simply fill in the coupon at left, drop it in the mail, and we will see that your binder is sent right out.

AIME Order Department
29 West 39th Street
New York 18, N.Y.

Please send me:

- ☐ AIME Directory Binder Only, \$2.50
- ☐ AIME Directory Binder Complete with Three Society Directories, \$5.00
- ☐ The Metallurgical Society Directory, \$1.00
- ☐ Society of Petroleum Directory, \$1.00
- ☐ Society of Mining Engineers Directory, \$1.00

YOU CAN READ 'BUELL CYCLONES' AS '\$SAVINGS\$'

In recovering valuable dust, a slight increase in collection efficiency can amount to a significant savings in dollars. Buell cyclones provide this extra efficiency not found in ordinary cyclones. Only Buell cyclones have the unique design feature . . . the "Shave-Off", which provides this plus in efficiency, stops fine dust from escaping. Savings with Buell cyclones can be very significant. In the recovery of catalyst in a large cat cracker in oil refining, for instance, 1/10 of 1% increase in efficiency results in daily savings of \$17,000 (at \$250 per ton). Even with lighter dust loadings savings can be surprisingly high. Start saving today by finding out more about the extra efficiency of Buell cyclone collectors. Literature is available or we'll be glad to study the savings possibilities in your dust collection problem. Contact Buell Engineering Company, Inc., 123 William St., New York 38, N. Y. Northern Blower Div., 6404 Barberton Ave., Cleveland, Ohio. (Subsidiary: Ambuco Limited, London, England).

In an ordinary cyclone dust re-circulates in the double-eddy currents at the top, finer dust escapes. The result is erosion of the walls of the cyclone and loss of efficiency. In the Buell cyclone (as shown in the cutaway illustration) the dust at the top makes less than one revolution before it is trapped by the "Shave-Off". It is then channeled down to the lower portion of the cyclone, well below the clean gas outlet. Result: longer life for the cyclones, plus higher collection efficiency.

**Are you paying a premium
for material handling control?**

How IPEC CONTROL SYSTEMS bring MATERIAL SAVINGS to material handling methods

This IPEC CONTROL SYSTEM is designed to keep a complicated 2500 TPH copper cycle working smoothly at the western mill of a major copper producing firm. Automation for the ore-handling sequence at this plant is set-up in advance and one man at the central control panel can oversee the combined operations of storage, sampling and blending of several combinations of mill feeds.

The precision performance afforded by IPEC systems will safeguard your process against malfunction and provide economy, speed and reliability never before attained. In fact, this is the end result of any process "master minded" by an IPEC SYSTEM.

If you are paying a premium for inadequate or outmoded production methods, consult our experienced engineers for a solution to your problem. The creative staff at Industrial Physics and Electronics Co. applies new concepts and original thinking to perplexing problems and development of new processes.

Write us, without obligation, for all the interesting details.

You get these **ADVANTAGES** with **CF&I MINING PRODUCTS**

CF&I offers the mining industry a wide range of steel products designed to help increase output while maintaining safe operations. This combination of economy and safety is another of the implications of the Image of CF&I.

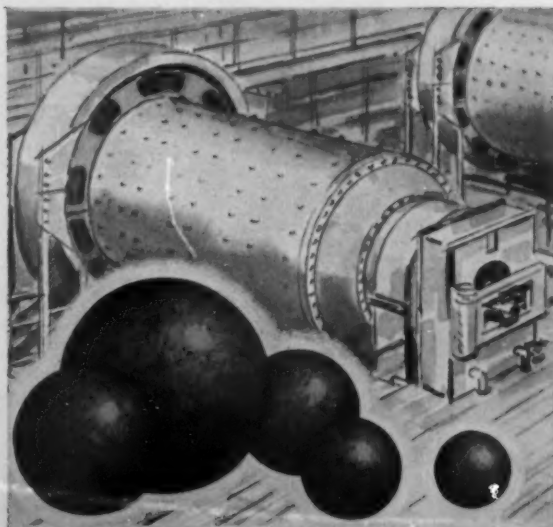

CF&I Mining Products are fabricated

from steels produced in CF&I's own mills. Every product is tested, controlled and inspected during each successive step of manufacture to meet and exceed the highest standards of the mining industry. In actual operation, each CF&I Mining Product provides the following advantages.

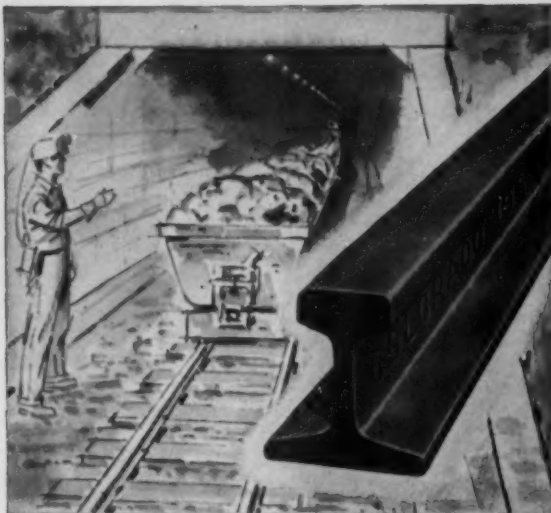

CF&I GRINDING RODS: Hot-rolled and machine-straightened from special analysis steels, in 1½" to 4" diameters (in ½" increments) and any length required.

ADVANTAGES: Maximum resistance to abrasion and bending. Extra-long service life.

CF&I GRINDING BALLS: Made from high carbon steels, chemically controlled to attain maximum hardness and toughness, in sizes ¾" to 5".

ADVANTAGES: Resist abrasion and withstand impact—grind more at lower cost.

CF&I MINE RAIL AND FASTENINGS: Rails available in weights from 12 to 45 pounds per yard. Fastenings include splice bars, angle bars, spikes, track bolts and nuts (square and hexagonal).

ADVANTAGE: Rails tailored to your individual requirements.

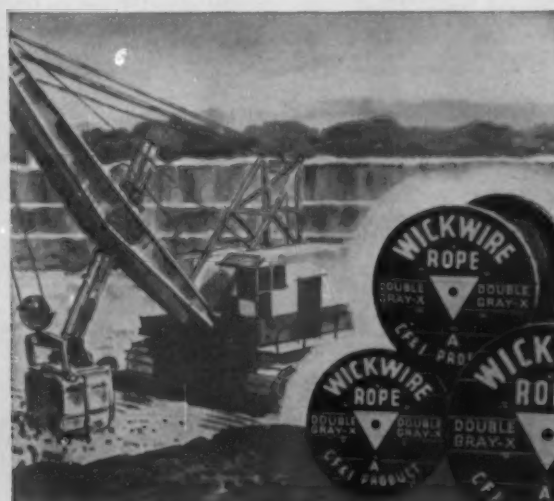

CF&I ROCK BOLTS AND REALOCK METALLIC FABRIC: Rock Bolts with Patten shells (left or right hand threaded) available in $\frac{1}{4}$ ", $\frac{3}{8}$ " and $\frac{1}{2}$ " sizes, from 24" to 120" long; also 1" slot and wedge type. Use with Realock Metallic Fabric.

ADVANTAGE: Achieve safe, economical, permanent ground support.

CF&I SPACE SCREENS: Your choice of metals, weaves, meshes and edge arrangements. For maximum volume or absolute screening accuracy, there's a CF&I Space Screen available.

ADVANTAGE: Space Screens that exceed your most exacting requirements.

CF&I-WICKWIRE WIRE ROPE: Available in all sizes, constructions and grades for every mining application. A new Wickwire development—Double Gray-X rope—has extra-high strength. In addition, a new wire drawing process employing molybdenum* builds a permanent molecular protective shield around every wire in Double Gray-X, giving this rope a longer service life.

ADVANTAGE: Wire ropes that make no bargain with safety.

*Registered Trademark of Climax Molybdenum Co.

For complete information on any CF&I Mining Product, contact your local CF&I sales office, or write for catalogs.

1500 tons daily

WITH EIMCO 630 EXCAVATORS

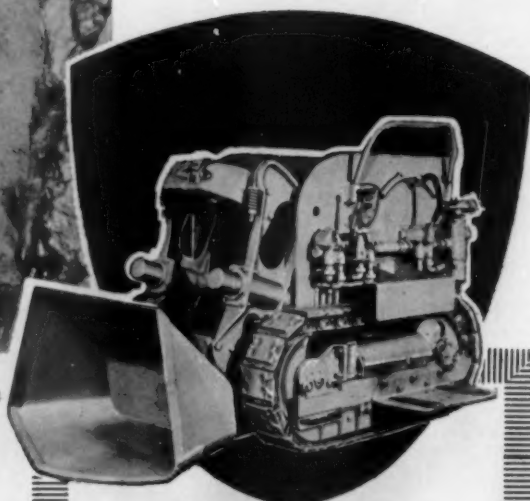

Photograph - Courtesy of Maritime Mining Corporation

Eimco 630's handle three-quarters of the daily production of 2,000 tons at The Maritime Mining Corporation in the Green Bay District of Newfoundland. When required, individual machines, working continuously, have loaded up to 600 tons in eight hours. The required average for each machine per shift is 340-350 tons.

Over a checking period of two months, maintenance costs averaged only \$0.05 per ton including labor and parts!

You just can't beat an Eimco for economical draw-point loading . . . or for mucking in shafts, tunnels, big slopes, in developments and in production.

Get all the facts on the great Eimco 630 Excavator. Contact your nearest Eimco dealer or branch, or write The Eimco Corporation, P. O. Box 300, Salt Lake City 10, Utah.

EIMCO 630 FEATURES

- * Independent track control
- * Alloy steel construction
- * Track oscillation for stability
- * Adjustable digging depth
- * Anti-friction roller bearings
- * Sturdy alloy cast steel rocker arms
- * Air or Electric powered
- * Low Maintenance — High Production

"ADVANCED ENGINEERING AND QUALITY CRAFTSMANSHIP SINCE 1884"

Specialized chemicals for minerals— from Armour

Armour Industrial Chemical Company
offers a wide variety of chemicals for
mineral applications—cationic flotation
collectors, flocculants, and conditioning
agents for hygroscopic materials.

Mineral applications

Recommended Armour Chemical

Flotation:

Silica from Phosphate Rock
Mica, Spodumene and Feldspar from pegmatites
Iron-bearing minerals from glass sands
Sylvite from Halite

Bulk flotation: Heavy minerals from beach sands

Armac® T (tallow amine acetate)—a technical grade amine salt between 95% and 102% neutralized. It is a medium-hard solid. At 25°C it can be used as a 5% water solution producing a pH of about 7. At this solution it is also an anti-caker of hygroscopic materials, even when applied to moist surfaces.

Flotation:

Silica from Phosphate Rock
Mica, Spodumene and Feldspar from pegmatites
Iron-bearing minerals from glass sands
Sylvite from Halite

Bulk Flotation: Heavy minerals from beach sands

Armeen® T (tallow amine)—a technical grade amine that is a medium-hard solid. It can be used straight when blended with frother or secondary collector (usually 2 parts amine to 1 part solvent). Or it can be used when neutralized with acetic acid or hydrochloric acid and solubilized in water. When heated to its free-flowing temperature, straight Armeen T functions as a conditioning agent for anti-caking hygroscopic salts or formulations.

Flotation:

Silica, Mica and Pyrite from Calcite or Kyanite
Silica from Iron Oxides
Monazite from a variety of heavy minerals

Armac C (coco amine acetate)—another technical grade amine salt between 95% and 102% neutralized. This one is a soft and pasty solid that can be used as a 25% water solution at 25°C. Armac C is recommended for applications in which mineral sizing is fine, or where sharp mineral selectivity is desired.

Flotation:

Silica, Mica and Pyrite from Calcite or Kyanite
Silica from Iron Oxides
Monazite from a variety of heavy minerals

Flocculant: Selective flocculant for negatively-charged particles

Duomac® T (tallow diamine di-acetate)—a diamine salt, about 100% neutralized, that is a soft and pasty solid. It can be used as a 20% water solution at 25°C. Duomac T is a stronger collector than Armac C and is capable of floating coarser mineral sizes.

Mineral applications

Recommended Armour Chemical

Flotation:

Sylvite from Halite

Armeen TD (tallow amine, distilled)—the equivalent of Armeen T, but higher in primary amine content and a quite-hard solid. It is neutralized with acetic acid or hydrochloric acid, then solubilized to about a 5% water solution before use.

Flotation:

Sylvite from Halite

Conditioner:

Anti-caking agent for Sylvite

Armeen HTD (hydrogenated tallow amine, distilled)—a hard, waxy, completely saturated derivative of tallow amine. Less soluble and more inert than Armeen TD. As a collector, it is used as a 1% water solution of the acetate or hydrochloride salt. As a conditioner, it is melted and applied straight.

Flotation:

Mica and Feldspar from
pegmatites

Silica from Phosphate Rock

Armoflote® 54-38 and 58-22 (amines in nitrogen-based solvents)—chemicals to be used straight in flotation circuits, blended with either the frother or secondary collector to aid their dispersion in the pulp. Armoflote 54-38 is liquid at 90°F, Armoflote 58-22 at 60°F.

New Product Applications

Anti-caking—Anti-dusting

Armoflo® 48 and 65—Armour Armoflo 65 (cationic) and Armoflo 48 (anionic) are new formulations. Both are liquid at normal temperatures with melt points of 5°C or below. They are sprayed or dripped as received in applications for:

- (1) the control of caking in hygroscopic salts, fertilizer mixes, or granular fertilizers.
- (2) the control of dusting in plants where grinding or rolling systems result in abrasion of particles with subsequent dusting.
- (3) the control of both caking and dusting where

joint problems exist in fertilizer or hygroscopic salt plants.

Normal reagent consumption for the control of caking, or of both caking and dusting, is one pound of Armoflo per ton of product. For strictly dust control, the recommended application rate is 0.5 pounds per ton of product, or less.

Armoflo 65 is finding successful application with ammonium and potassium salts, and a wide variety of high analysis blended fertilizers. Armoflo 48 is recommended for application with sodium and calcium salts.

Write us for samples and technical bulletins. Armour's Technical Service Department will also be happy to help you determine the proper chemical for your specific mineral need.

NORDBERG MINING MACHINERY

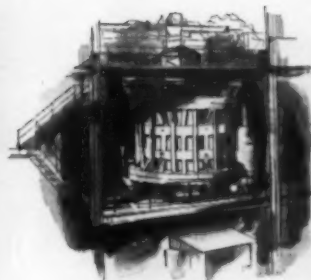

FOR POWER GENERATION

Nordberg engines are built in sizes from small 10 horsepower units to over 12,000 horsepower ... and are available for Diesel, Dualfuel® and Spark-Ignition Gas operation.

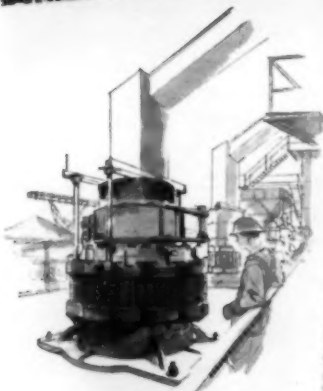

FOR HOISTING

Nordberg has an established reputation second to none, and can furnish both conventional and friction type mine hoists for men and material, to meet specific requirements.

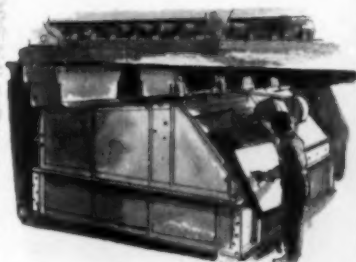

FOR PRIMARY CRUSHING

Symons® Primary Gyratory Crushers are built for big tonnage, heavy duty primary breaking in 30", 42", 48", 54", 60", and 72" feed opening sizes. Capacities to 3500 or more tons per hour.

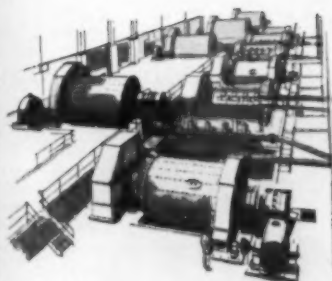

FOR REDUCTION CRUSHING

Symons Cone Crushers are built in both Standard and Short Head types, in sizes from 22" to 7' in diameter. Capacities from 6 to 900 or more tons per hour.

FOR SCREENING

From scalping to fine screening, there is a Symons Screen built to do a better job at low cost. Let Nordberg experience help you select the screen best suited to your needs.

FOR WET AND DRY GRINDING

Nordberg Grinding Mills include Rod, Ball, Pebble, Tube and Compartment types, in sizes from 6' to 13' in diameter and up to 50' in length.

SYMONS ... A registered
Nordberg Trademark
Known Throughout the World.

OPENING A NEW ERA IN PERCUSSION DRILLING...

New PR123 GARDNER-DENVER Power Rotation Rock Drill

**ABSOLUTE
CONTROL**

New Gardner-Denver PR123 gives your operator absolute and independent control of all these vital functions:

**ROTATION
WITHOUT
IMPACT**

—efficient gear motor supplies rotation in either direction, even when drill is not impacting. Three rotational speeds.

**IMPACT
WITHOUT
ROTATION**

—separate control provides drill impact without rotation. Percussion can be varied from light to heavy blows, and used to loosen couplings or stuck steel.

**IMPACT
AND
ROTATION**

—use light percussion and rapid rotation for soft formations . . . or heavy impact and slow rotation for drilling hard rock.

**UP TO 30% FASTER
PENETRATION**

New PR123 uses all hammer energy for percussion. There's no rotational drag on piston hammer. Results: faster hard-rock drilling than ever before. Depth of hole does not affect drilling speed.

SELECTIVE DRILLING

Now your driller can select the right combination of rotation speed, impact force, feed pressure and hole blowing for fastest penetration in any type of rock—can change drilling action as soon as the bit hits a new formation.

**NO ROTATION
PARTS IN CYLINDER**

New PR123 has no rifle bar, ratchet ring, pawls, or other internal rotation parts that frequently cause trouble. Rotation is supplied by an efficient gear motor, and a torsion bar absorbs rotational shock between shank and motor.

**POWER COUPLING
AND UNCOUPLING**

Independent power rotation is a time-saver. Rotation without impact permits power coupling of threaded rod without thread damage. Reverse rotation speeds uncoupling when coming out of the hole. Independent power rotation also helps free stuck steel.

Specifications: Piston diameter : $4\frac{1}{2}$ ". Length: $38\frac{1}{2}$ ". Weight, less mounting: 290 pounds.

SME BULLETIN BOARD

Reports of Your Technical Society

SME Board Meeting To Be Held in Denver October 4

Brown Palace Hotel in Denver will be meeting place for SME Board of Directors. At least part of the meeting will be open to all members. Many SME Board members will attend the Colorado Plateau Section meeting next day to hear a talk by AIME President Joseph L. Gillson. SME also recommends the following session listed in the tentative technical program of the Society of Petroleum Engineers' Fall Meeting in Denver October 2-5:

MONDAY, OCTOBER 3

2:15 p.m. to 5:00 p.m.—**ROCK MECHANICS**—Brown Palace Hotel

1531-G: *Geologic Aspects of Fracturing Reservoirs*, P. C. BADGLEY, Colorado School of Mines; W. C. PENTILLA, The Atlantic Refining Co.; and J. K. TRIMBLE, Ohio Oil Co.

1532-G: *The Fragmentation of Brittle Media by Concentrated Loadings*, R. SIMON, Battelle Memorial Institute

1533-G: *Photoelasticity Study of Rock Bit Tooth Behavior*, W. H. SOMERTON, U. of California

1534-G: *Fractures and Craters Produced in Sandstone by High Velocity Projectiles*, J. S. RINEHART and W. S. MAURER, Colorado School of Mines

1535-G: *Velocity-Log Interpretation: The Effect of Rock Bulk Compressibility*, J. GEERTSMA, Koninklijke/Shell Laboratorium

SME President A. B. Cummins reports that effective June 30, 1960, his address is:

Morning Glory Road
Bound Brook, N. J.

**SME NOMINATIONS
BEGIN PAGE 847**

Remember These Fall Section Meetings

Joint meeting of SME Coal Division and AIME St. Louis Section, St. Louis, September 8-9.

AIME Adirondack Section meeting, September 24. Tour through Gouverneur Talc Co. plant, Gouverneur, N. Y.

AIME Colorado Plateau Section meeting, Denver, October 5.

AIME Rocky Mountain Minerals Conference, Salt Lake City, October 5-7. Utah Section host.

1961 NOMINEES FOR INSTITUTE OFFICERS AND DIRECTORS

L. E. ELKINS

Lloyd E. Elkins has been nominated for AIME President-Elect by the Society of Petroleum Engineers to take office as President in 1962. Mr. Elkins is the production research director for Pan American Petroleum Corp. He has been associated with the company since 1934 when he joined Stanolind Oil & Gas Co. (now Pan American) after graduation from Colorado School of Mines. He has served AIME as a Board member and vice president. He has also served the Society of Petroleum Engineers in many capacities.

Vice Presidents—Directors

A. B. Cummins, President of SME for 1960, is serving a three-year term on the AIME Board of Directors and has been nominated by the Society of Mining Engineers to serve as AIME vice president for one year. He is manager, Central Chemical and Physical Research Dept., Johns-Mansville Research Center, Mansville, N. J. After earning his doctorate at the University of California in 1920, he joined the Celite Co. (now a part of Johns-Mansville) and became a development engineer, research engineer, manager of Celite research, manager of basic research, and finally in 1956 manager of the department he now heads.

J. W. Woomer, Past-President of SME for 1960 and a Vice President of AIME in 1960, has been nominated by the Society of Mining Engineers to serve another one-year term as Vice President. Mr. Woomer is head of his own consulting firm in Pittsburgh. He has long been an active member of the AIME Coal Division. **John S. Bell**, Past-President of SPE, has been nominated by the Society of Petroleum Engineers as AIME

A. B. CUMMINS

J. W. WOOMER

Vice President for one year. Since June 1959 Mr. Bell has been area production manager, Gulf Coast area, Humble Div., Humble Oil & Refining Co. He has been with the company since his graduation from the University of Oklahoma in 1930. **Wayne E. Glenn**, 1960 President of the Society of Petroleum Engineers, has been nominated by the Society as AIME Vice President for one year. He is production manager for Continental Oil Co. with which he has been associated since 1939, just prior to his graduation from the University of Oklahoma. He has been active in the Society for many years and served as a member of the SPE Board of Directors.

Carleton C. Long, 1960 TMS President, has received The Metallurgical Society's nomination as AIME Vice President for a one-year term. Mr. Long, who has been with St. Joseph Lead Co. since 1935, is presently director of research, zinc smelting division. He has been an active member of AIME since 1937. **J. S. Smart, Jr.**, 1960 President-Elect of TMS, has been nominated as AIME Vice President for one year by The Metallurgical Society. Mr. Smart is general sales manager at the American Smelting & Refining Co. with which he has been associated since 1936. Prior to that he had worked for Ford Motor Co. and Detroit Lubricator.

Directors

W. B. Stephenson, president, Allen-Sherman-Hoff Pump Co., has been nominated by the Society of Mining Engineers to serve as Director for three years (see page 847 for picture and biography).

Clark L. Wilson has been nominated by the Society of Mining Engineers to serve as director for three years. Mr. Wilson was recently named chairman of The Emergency Lead-Zinc Committee with headquarters in Washington, D. C. Since 1940 he has been associated with New Park

J. S. BELL

W. E. GLENN

C. C. LONG

J. S. SMART, JR.

Mining Co. and has been vice president since 1952.

Karl L. Feters, vice president, research and development for The Youngstown Sheet & Tube Co., has been nominated by The Metallurgical Society to serve on the Board of Directors, AIME, for three years. He is a graduate of Carnegie Institute of Technology and Massachusetts Institute of Technology.

Richard C. Cole has been nominated by The Metallurgical Society to serve on the AIME Board of Directors. He is vice president in charge of manufacturing for Vitro Chemical Co. and a vice president of Vitro Minerals Corp. He has been with the company since 1954. Prior to that, Mr. Cole served 20 yrs with American Smelting & Refining Co. He is a graduate of the University of Washington.

Robert B. Gilmore, senior vice president and director of DeGolyer & MacNaughton, has been nominated by the Society of Petroleum Engineers as AIME Director for a three-year term. Mr. Gilmore's association with AIME began as a student in 1931. He is a graduate of the University of Tulsa.

The second AIME Director representing the Society of Petroleum Engineers will be the 1962 President of the Society. The SPE Nominating Committee will announce his name in the fall and he will become an AIME Director, starting a three-year term in February 1961.

C. L. WILSON

K. L. FETERS

R. C. COLE

R. B. GILMORE

The Chairmen of the three Society Nominating Committees have announced nominations for AIME President-Elect, Vice Presidents, and Directors for 1961. Each of the Society Bylaws provides for additional nominations. (The Bylaws of each Society in substantially final form have been published in the Journals and in revised form in the 1957 Institute Directory.) If no alternate slate is proposed, no letter ballot will be necessary and the selections of the three Nominating Committees will be declared elected in accordance with the respective Society Bylaws well in advance of their installation at the 1961 Annual Meeting in February in New York.

SME ANNOUNCES NOMINATIONS FOR THE 1961 SOCIETY OFFICERS

W. B. STEPHENSON

William B. Stephenson has been nominated President-Elect, Society of Mining Engineers, to take office as President in 1962. He is president of Allen-Sherman-Hoff Pump Co., the position he has held since 1956. He first became affiliated with the company in 1938 after having worked for Cities Service Oil Co. and Jerguson Gage & Valve Co. In 1948 he joined Ash Export Co. as manager but by 1951 he was back with Allen-Sherman-Hoff Pump Co. as vice president. He is past-chairman of the Minerals Beneficiation Division of SME and general chairman of the AIME International Symposium on Agglomeration to be held April 1961 in Philadelphia.

Edward G. Fox has been nominated for the office of Eastern Regional Vice President for a three-year term. Since 1956 he has been president of the Bituminous Coal Operators Assn., organized in 1950 to carry on labor relations with United Mine Workers of America. He began his association with the anthracite industry during his summer vacations. Upon graduation he took his first full-time job as an engineer with J. G. White Corp. Prior to taking his post with the Bituminous Coal Operators' Assn., he was president of Philadelphia & Reading Corp. Mr. Fox is a graduate of Pennsylvania State University and was awarded its Distinguished Alumnus Medal.

Dennis L. McElroy has been nominated by the Coal Division as a Director of SME for a three-year term. He is executive vice president of Consolidated Coal Co., with which he has been associated since 1943,

beginning as chief engineer at Fairmont, W. Va. He moved to the company's Pittsburgh office in 1946 as chief engineer and became successively vice president—engineering and vice president—operations. In 1959 he became a director of the company and was appointed to his present post in May of this year. A graduate of West Virginia University, School of Mines, he served as a member of the faculty for a number of years. During World War II he served as chief of the coal section of the War Production Board. He was associate editor of Mineral Industry Yearbook, 1939-1940 and is the author of several technical works.

Raymond H. Feierabend is the Industrial Minerals Division nominee for the SME Board of Directors. He is assistant vice president of Freeport Sulphur Co., a post he has held since 1957. It was in this capacity that he was directly responsible for construction and development of Freeport's Grand Isle mine. For several years prior to this he was general superintendent of the company's Grande Ecaille operation. He joined Freeport as a junior engineer at Hoskins Mound, Texas, in 1942 following his graduation from Columbia University School of Mines. Over the years Mr. Feierabend has been active in M & E and IndMD affairs and was Secretary-Treasurer for IndMD in 1959.

Wayne L. Dowdey is the Minerals Beneficiation Division nominee for the SME Board of Directors. In 1958 he was appointed regional manager for the Birmingham and Pittsburgh districts of The Eimco Corp., the position he now holds. His association with the company began in 1945 as sales engineer. In 1950 he was appointed manager of the Southern District. Prior to joining Eimco he worked for Republic Steel, beginning in 1938 as mechanical leader and working up to superintendent of the company's iron ore concentrating mill in Spaulding, Ala. He became a member of AIME in 1945 and has served on various MBD technical committees as well as being Secretary-Treasurer, Regional Vice Chairman, and Associate Chairman of the Division.

Alfred D. Rood, assistant to the vice president of Andes Copper Mining

Co. and Chile Exploration Co., subsidiaries of The Anaconda Co., has been nominated for the SME Board by the Mining and Exploration Division. A graduate of Michigan College of Mining and Technology, with B.S. and E.M. degrees, Mr. Rood began as a rodman with Inspiration Cons. Copper Co. in 1925, working up to the position of construction engineer, division engineer, and finally assistant chief engineer. From 1948 through 1955 he was in Butte, where he designed and developed the Kelley mine and other projects. In 1956 he went to Chile to draw up plans for Andes Copper Mining Co.'s El Salvador mine. Since his return to New York he has continued to be in direct contact with that project.

Frederick S. Turneure has also been nominated by the Mining and Exploration Division to be an SME Director. A professor of geology at the University of Michigan, he previously taught at Michigan College of Mines and Technology as an instructor of geology and at Harvard University as a research associate and a visiting lecturer. He received his B.S. from the University of Wisconsin and his M.A. and Ph.D. from Harvard University. His field experience includes work with Cinco Minas Co. in Mexico, where he was an engineer in 1923-24 and chief geologist 1927-30, 1933-35; Patino Mines & Enterprises Con. Inc., where he was head of the exploration department, 1935-37, and Mauricio Hochschild, SAMI, in Bolivia; and Oliver Iron Mining Co. in Duluth. He was chairman of the Subcommittee on Fundamental Research, National Science Foundation, 1953-55.

Section 11 of Article IX, SME Bylaws, provides: "The names and biographies of the nominees shall be published in the July issue of MINING ENGINEERING. Any 25 members of the Society may submit additional nominations to the Board of Directors for one or more of the positions specified. . . . (President-Elect and one Regional Vice President.) Such nominations shall be submitted not later than September of that year [1960], and notice of the additional nominees for the position or positions designated shall then be published in the October issue of MINING ENGINEERING. . . . If additional nominations are received, a letter ballot for the positions shall be sent on or about November 1 to all voting members of the Society in the United States, Canada, and Mexico. Ballots shall be returned within 45 days after they are mailed."

**THE ONLY
WORLD WIDE
PROVED SYSTEM
40 INSTALLATIONS
in
15 COUNTRIES**

THE DUTCH STATE MINES HEAVY MEDIUM CYCLONE WASHER

Available in the United States exclusively from
ROBERTS & SCHAEFER

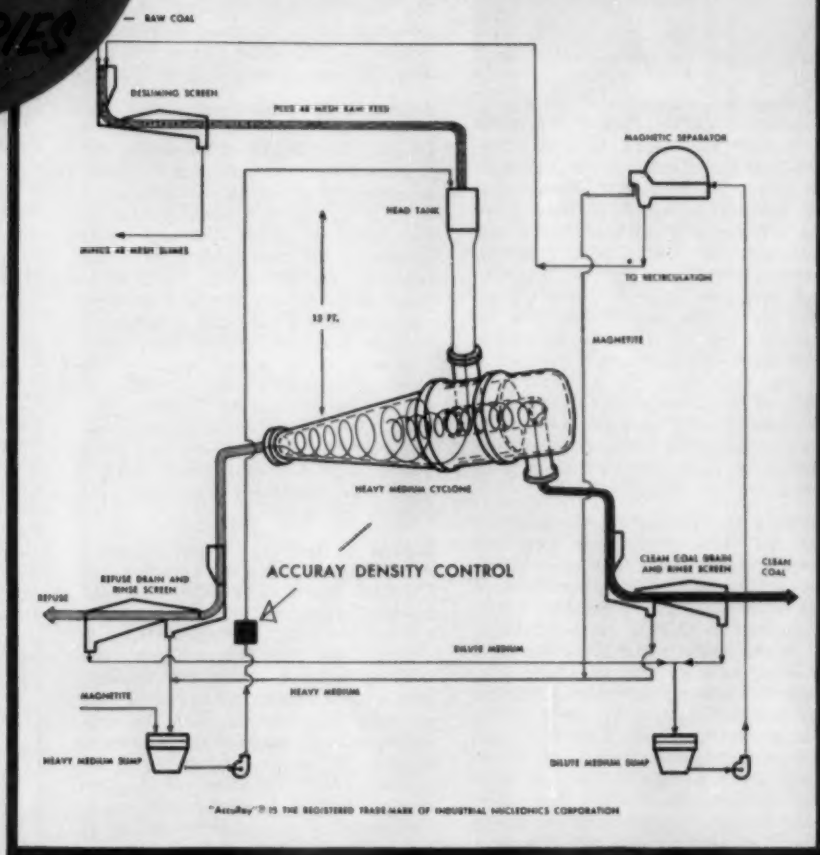

If you are facing the necessity of upgrading the quality of your fine coal to meet the exacting requirements of today's market, you can install the Dutch State Mines Heavy Medium Cyclone Washing System with complete confidence.

It is the only cyclone washing system proved sound, practical and efficient by successfully operating plants in many countries. It is the only system that gives you the advantages of the technical knowledge and experience of the Dutch State Mines engineering organization.

The Roberts & Schaefer technical staff handles all details of engineering and construction of Heavy Medium Cyclone Washing Plants . . . with the continuing collaboration of the Dutch State Mines engineers on installations in United States.

The Dutch State Mines Heavy Medium Cyclone Washer is available in the United States exclusively from Roberts & Schaefer. Call or write us for detailed information.

A Personal Invitation to Visit Our New Offices

During recent weeks we have had the pleasure of welcoming many of our friends in our new general offices in Chicago. Here at 201 North Wells Street, our executive staff and engineering organization now have greatly expanded space and the most modern facilities to serve the coal mining industry. When you are in Chicago, do come in and visit with us.

COAL DIVISION NEWS

D. R. MITCHELL

G. E. KELLER

Nominee for Chairman-Elect of the Coal Division is **David R. Mitchell**, recently appointed associate dean of the College of Mineral Industries, Pennsylvania State University. A graduate of the university, he returned in 1938 as a member of the faculty and since 1944 has been chairman of the Division of Mineral Engineering. From 1924 to 1926 he served as an engineer with the Bethlehem Mines Corp. and from 1927 until his return to Penn State he was on the faculty of the University of Illinois. Since taking a post at Penn State, he has been able to carry on a limited consulting practice, numbering many of the coal companies in the area among his clients. As long-time secretary of the Coal Division, he is well known to the members.

George E. Keller has been nominated Secretary-Treasurer. A native of Illinois, he graduated from the University of Illinois with a degree in chemical engineering. For more than 30 years he was with Commercial Testing & Engineering Co. as manager of the Charleston, W. Va. branch and as chemical director. In 1954 he joined U.S. Steel Corp. as manager—coal evaluation, central operations coal division, the position he still holds. He was former chairman of the Central Appalachian Section of AIME and has served as program chairman and member of the Executive Committee of the Coal Division.

H. J. Hager has been nominated to serve on the Executive Committee of the Coal Division for a three-year term from February 1961 to February 1964. He is vice president—mining with Alabama By-Products Corp., Birmingham. He has been associated with the company for more than 25 years, beginning as a mining engineer principally on coal preparation and mine plant construction. He received his professional education at the University of Alabama, where he

attained his B.S. in mining engineering in 1928 and his M.S. in 1931. He secured his M.S. while on a USBM fellowship in coal preparation.

Another nominee for the Executive Committee is **James D. Reilly**, vice president of Hanna Coal Div., Consolidation Coal Co. He was born in Edinburgh, Scotland, and was brought to the U.S. while still an infant. He received his education in the public schools of West Terre Haute, Ind. In the early 1920's he first started working at various coal mining jobs. He became superintendent of Piney Fork Mine of Hanna Coal Co. in 1942; general superintendent in 1945; general manager of underground mines in 1946, and attained his present position in 1947.

Wilbur A. Weimer has also been nominated to serve as a member of the Executive Committee for the three-year term from February 1961 to February 1964. He was born in a small mining town in Illinois; reared on a farm in Kansas; and attended Kansas State College, where he took a course in mechanical engineering. Ill health forced him to withdraw in his junior year. In 1936 he was employed by the Northern Illinois Coal Corp., becoming chief engineer of the

company in 1943. When the company was merged with Peabody in 1949 he remained and has been chief engineer in charge of mines in Indiana and Illinois since then. He has been responsible for a number of inventions and developments extensively used in the coal industry.

William C. McCulloch, now serving as Chairman-Elect of the Division, will become Chairman in 1961. A graduate of the University of North Dakota, he received an M.S. at the University of Washington, where he held a USBM fellowship at the Northwest Experiment Station in Seattle. His first job was with Pacific Coast Coal Co. as coal washing engineer. In 1924 he went to work for the USBM as a coal mining engineer. The following year he joined Heyl & Patterson Inc. in Pittsburgh and in 1930 became chief chemist for Koppers Rheolaveur Co. He took the position of preparation manager in 1935 for United Electric Coal Co. and from 1941 served Roberts & Schaefer Co. in the same capacity. In March of this year he was made president of the company's Chicago operation, which engages in engineering and construction of coal preparation facilities and related fields.

Unexcelled for All Purpose Fine Mesh Screening

The Leahy® No-Blind® vibrating screen handles virtually any type of fine mesh screening.

Differential vibration snaps wedging particles loose 1600 times per minute, keeping the mesh cleared and wide open.

Where dust is a problem, dustproof models are available; and for wet screening, CONCENCO® spray nozzles are easily added. Send for Bulletin 15-J.

NOTICE—SME PREPRINT AVAILABILITY, 1960 ANNUAL MEETING

The following list of papers (from the 1960 New York Annual Meeting) will be available until Jan. 1, 1961. Coupons received with the 1960 dues bills and those distributed at the 1960 Annual Meeting will also expire on this date. Purchased coupons books will be honored on any future date. A new listing of available papers will appear in a forthcoming issue. It will include additional papers presented at the 1960 Annual Meeting (New York) and at other SME meetings throughout the year. Preprints may be obtained (upon presentation of properly filled out coupon) from SME Headquarters, 20 W. 39th St., New York 18, N. Y. Coupon books may be obtained from SME for \$5 a book (10 coupons) for members or \$10 a book for nonmembers. Each coupon entitles the purchaser to one preprint.

MINERALS BENEFICIATION DIVISION

N. PLUMMER

S. E. ERICKSON

The Minerals Beneficiation Division Nominating Committee has selected the following people as candidates for Division offices for the term beginning February 1961. **Nell Plummer** has been nominated Chairman and **Stephen Erickson** Associate Chairman. Under MBD Bylaws, Mr. Erickson, as Associate Chairman, will head the Division's Program Committee and will serve as a member of the SME Program Committee. Mr. Plummer and Mr. Erickson have also been designated alternates for the SME Nominating Committee. **Donald A. Dahlstrom** has been named First Regional Vice Chairman and **Bunting S. Crocker**, designated Second Regional Vice Chairman, will also serve as MBD representative on the SME General Editorial Committee. Nominee for Secretary-Treasurer is **William T. Marston**.

Neil Plummer, serving as Associate Chairman during 1960, is superintendent of the Arthur plant, Kennecott Copper Corp., Magna, Utah. Before joining Kennecott he was associated with New Jersey Zinc Co., International Smelting & Refining Co., and Utah Copper Co. He received his professional education at Missouri School of Mines.

Stephen Erickson, the Associate Chairman nominee, has been serving the Division as First Regional Vice Chairman this year. He is a beneficiation engineer with M. A. Hanna Co., Hibbing, Minn. A native of Minnesota, he attended the University of Minnesota School of Mines, where he received a degree in metallurgy.

Donald A. Dahlstrom, slated to serve as First Regional Vice Chair-

man, is director of the Eimco Corp. research and development department, a position he has held since 1953. A graduate of the University of Minnesota, he received his Ph.D. from Northwestern University, where he was a member of the faculty for ten years.

Bunting S. Crocker, named for the office of Second Regional Vice Chairman, is vice president of Kilborn Engineering Ltd. Prior to his association with Kilborn he worked for Lake Shore Mines Ltd. A native of Toronto, he is a graduate of the University of Toronto.

Secretary-Treasurer designate, **William T. Marston**, is currently serving the Division in that capacity. He is area manager of industrial sales, Dorr-Oliver Inc., a position he has held since 1957. He has been with the company since his graduation from the University of Toronto in 1949.

The Nominating Committee has also named committee chairmen to serve for the coming year, if elected. **Norman Weiss**, milling engineer for American Smelting & Refining Co., has been chosen to head the Nominating Committee. He is a graduate of Massachusetts Institute of Technology and has long been active in MBD, SME, and AIME affairs. **Roy A. Johnson**, nominated Membership Chairman for a two-year period, will also serve as MBD's representative on the SME Membership Committee. He is presently manager of the Central Industrial Div. of Dorr-Oliver Inc., with which he has been associated for many years. He is a graduate of the University of Idaho.

Donald O. Carlson, mill superintendent, Kermac Nuclear Fuels Corp., has been selected as Chairman for Materials Handling and Storage. **J. H. Brown**, U.S. Steel Corp., has been chosen to head the Crushing and Grinding Committee. Solid Fluid Separation will be headed by **Dale C. Matthews**, chief metallurgist, The Anaconda Co. **George A. Komadina**, mill superintendent for Pima Mining Co., has been chosen to head

Concentration. **F. M. Lewis**, superintendent of ore concentration at Tennessee Copper Co., has been slated to take charge of Operating Control. Chemical Process Chairman will be **F. M. Stephens**, who was with American Smelting & Refining Co. before his retirement. **William F. Stowasser, Jr.**, senior research engineer for Jones & Laughlin Steel Corp., will take care of Pyrolysis and Agglomeration. **Frank J. Windolph**, assistant general superintendent, Climax Molybdenum Co., will head Mill Design for a two-year period. **Richard J. Charles**, research associate in the metallurgy and ceramics department of General Electric Research Laboratory, has been nominated Chairman of Basic Science. **D. W. McGlashan**, a member of the faculty of Montana School of Mines, has been nominated Chairman of MBD's Education Committee and will automatically become a member of the SME Education Committee. **O. F. Tangel**, chief of Minerals Beneficiation Div., Battelle Memorial Institute, has been selected to head the Papers and Publications Committee for two years and automatically becomes a member of SME Transactions Editorial Committee, also for a two-year period. He will serve on the AIME Rossiter W. Raymond Award Committee as well.

Further nominations include representatives for SME positions. **Wayne Dowdey**, regional manager, The Eimco Corp., has been nominated director (see page 000 for photograph and biography). He has also been named to the Nominating Committee as principal member along with **H. Rush Spedden**, director of research for Union Carbide Ore Co., and this year's Divisional Chairman. **F. W. Bloecher, Jr.**, sales engineer for American Cyanamid Co., and **R. J. Middlekauff**, vice president of The Middlekauff Corp., have been chosen as Admissions Committee members. **B. Clemmons**, research director, Metallurgy Research Center, the U. S. Bureau of Mines, Salt Lake City, has been nominated to the Mineral Economics Committee.

Model 35SL
35 ton payload

REPEAT ORDERS *are* Our Best Testimonials!

Since KW-DART placed its Model 35SL on the market two years ago, it has proved its excellent performance on job after rugged job. Its 24-cubic yard capacity (struck), its extreme maneuverability and durability assure the operator maximum operation at minimum cost. The 35SL, like all KW-DARTs, is tonnage engineered to stay on the job.

Mining & Exploration Division

J. G. HALL

J. M. EHRHORN

R. H. McCONNEL

R. W. MARSDEN

H. J. LEACH

In accordance with the bylaws of the Mining and Exploration Division, the Nominating Committee presents the following slate of officers to serve during the year beginning February 1961: **J. G. Hall**, Chairman; **J. M. Ehrhorn**, Assistant Chairman; **Roger McConnell**, Vice Chairman in charge of programs; **R. W. Marsden**, Vice Chairman for publications; and **Hugh J. Leach**, Vice Chairman in charge of membership. **Frederick Turneure** and **Alfred D. Rood** have been nominated to serve three-year terms as SME Board members (see page 000 for their photographs and biographies).

John G. Hall, nominee for chairman of the Division, is familiar to Division members, since he is presently serving as Assistant Chairman. Prior to that he had been active in AIME affairs at local section and national level for many years. Mr. Hall is plant manager of National Lead Co. Titanium Div. open pit mining, milling, and sinter operations at Tahawus, N.Y. a position he has filled since 1955. He first joined the company in 1952 as assistant plant manager of operations at Tahawus. A graduate of the University of Utah School of Mining and Engineering, he began his professional career in Utah with U.S. Smelting Refining & Mining Co. in 1939. From 1946 to 1952 he was general superintendent of Chief Consolidated Mining Co. operations in Eureka, Utah.

Jack M. Ehrhorn has been nominated as Assistant Chairman. He is director of industrial development for U.S. Smelting Refining & Mining Co., with which he has been associated since 1944. A graduate of Stanford University, from which he received his degree in mining engineering in 1927, Mr. Ehrhorn gained his early mining experience working as a miner, timberman, and shift boss with United Verde Copper Co.

in Arizona, the North Fork Placer Mines at Helena, Calif., and the Idaho Maryland Mines Corp. in Grass Valley, Calif. In 1938 he went into partnership with H. F. Lynn as a consultant engineer and geologist. For two years prior to joining U.S. Smelting Refining & Mining, he worked for Western Knapp Engineering Co.

Roger McConnell, nominee for Vice Chairman in charge of programs, has been chief geologist for The Bunker Hill Co. at its operations office in Kellogg, Idaho, since 1946. He first became associated with the company in 1938 as geologist, the position he held until 1942 when he entered the U.S. Army, where he served until 1946. Mr. McConnell is a graduate of the University of Idaho where he received his B.S. in geology in 1932 and his M.S. in economic geology in 1936. From 1936 to 1938 he was a field assistant with the USGS, working in the Coeur D'Alene district in Idaho.

Nominated for Vice Chairman in charge of publications is **Ralph W. Marsden**, manager—geological investigation for Oliver Iron Mining Div., U.S. Steel Corp. A native of Wisconsin, he attended the University of Wisconsin, where he earned his master's and doctor's degrees as well as his B.S. He worked as geologist with the Wisconsin Geological Survey during the summers of 1934 to 1936 and 1938 and 1939. When World War II broke out he was geologist and chief, Geological Survey Group, Philippine Bureau of Mines, and was interned at Cebu, Santa Tomas, and Los Banos from 1942 to 1945. In 1945 he joined Jones & Laughlin Steel Corp. as geologist and except for a one-year period, 1946 to 1947, when he was associate professor of geology at the University of Oklahoma, he worked for this company until 1951. Since 1945

he has concentrated on the study of iron ore geology, working in Liberia, Venezuela, Cuba, Canada, and the U.S.

Hugh J. Leach has been nominated to serve as Vice Chairman for membership. A native of Minnesota and graduate of the Minnesota School of Mines, he has lived and worked in the Great Lakes region all his life. He was recently named vice president for foreign operations and iron ore development for The Cleveland Cliffs Iron Co., with which he has been associated since 1945. He began his professional career with Oliver Iron Mining Div., U.S. Steel Corp. in 1939 as mining engineer. From 1941 to 1945 he was superintendent of mines for Evergreen Mines Co.

AIME Annual Meeting 1961

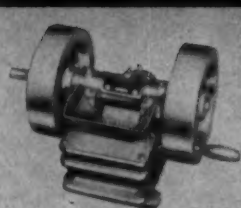

AIME is joining with the Society of Economic Geologists in planning the Geology Session for the 1961 Annual Meeting in St. Louis, according to a recent announcement from H. E. Harper, program chairman of the Geology Unit. Five prominent mining geologists have been invited to present papers on the subject *Mining Geology: Methods, Techniques, and Results*. The selection of papers will cover the application of geology in several of the major types of deposits and operations and should be of interest to people in mining as well as geology. SEG program chairman is M. L. Jensen, a professor at Yale University.

New York 19, New York

MORSE LABORATORY CRUSHERS and PULVERIZERS in stock now for PROMPT SHIPMENT

2 1/4" x 3 1/2" Jaw Crusher for
hand or power drive

3" x 6" Jaw Crusher,
capacity 2000 lbs. per hour

4" x 6" Jaw Crusher in combination with 8" disc pulverizer

Crushers employ the top (overhead) eccentric principle of operation. Only one toggle is used with simple handwheel adjustment for regulating spacing of jaws to size of product. Common base for crusher and motor can be supplied.

8" disc pulverizers have special alloy grinding discs for crushing to 100 mesh. Smooth interior and elimination of pockets simplifies your cleaning.

For complete specifications and prices on these items and other laboratory machinery write for BULLETIN 376A.

NEW, SAFE and AUTOMATIC

Mayo Mine Car Coupler

... the coupler with the mating instinct

Mayo's new, cast steel coupler for narrow gauge mine cars couples instantly on tangent or curves. Safe, self-centering link completely eliminates all hazards of hand couplings. Only a little more expensive than link-and-pin, it more than pays for itself by preventing accidents. If you can save one smashed finger, you've got these couplers paid for. Easily installed by bolting to existing cars. Write for Bulletin No. 21.

INDUSTRIAL MINERALS NEWSLETTER

G. F. CLAUSEN

L. DUPUY

H. E. UHLAND

F. R. HUNTER

R. E. WILPOLT

F. LOHSE

The Nominating Committee of the Industrial Minerals Division has prepared a slate of nominees to take office, if elected, in February 1961. **Carl F. Clausen** has been nominated Chairman and **Leon W. Dupuy** has been designated Secretary-Treasurer. **R. H. Feierabend** has been named SME Director for a three-year term (see page 847 for picture and biography).

Carl F. Clausen, nominee for chairman of the Division, is director of the manufacturing process department, Research & Development Div., of the Portland Cement Assn., with which he has been associated since 1947. A native of Denmark but long a U.S. citizen, he received his education at the Royal Polytechnical Institute of Copenhagen. During World War II and again during the Korean War he represented the cement industry on the War Production Board and the National Production Authority.

Leon Dupuy, designated Secretary-Treasurer, is coordinator of Mineral Resources Studies of River Basins, U.S. Bureau of Mines, Washington, D.C. After graduating from the University of Arizona in 1921, he worked for various mining operations in the Southwest, Mexico, and California until 1941, when he joined the USBM in Tucson, Ariz.

Vice chairmen of the Division are chosen to represent designated areas of the U.S. and Canada. **George F.**

Pettinos, Jr., president of George F. Pettinos Inc., has been named representative of the Northeast area. His first job was with Westinghouse Electric Co. in its research laboratory in Pittsburgh. He joined his present company, of which George F. Pettinos, Sr., was then president, in 1926. **H. E. Uhland**, superintendent of mining and beneficiation for the phosphate operations of International Minerals & Chemical Corp., has been nominated for the Southeast region. The Mid-Continent will be represented by **Frank R. Hunter**, chief geologist, Industrial Minerals Div., International Minerals & Chemical Corp., the position he has held since 1957. **Ralph H. Wilpolt**, nominated to represent the Rocky Mountain area, is manager of the minerals division of The Superior Oil Co. of California, Grand Junction, Colo. The Pacific Southwest representative will be **Fred Lohse**, who operates his own fertilizer business in Reno and does consulting work on industrial minerals projects. **P. E. Oscarson** has been named representative for the Pacific Northwest. Since 1945 he has had a private consulting practice as a mining engineer with an office in Spokane. **William T. Bray** of Canadian Refractories Ltd., has been selected to serve as representative of the Canadian area. Mr. Bray has been with Canadian Refractories Ltd. for 22 years, rising from miner to his present position as mine manager.

The following members have been nominated to three-year terms on the Executive Committee: **Robert S. McClellan**, vice president of Gouverneur Talc Co., subsidiary of R. T. Vanderbilt Co. Over 20 years ago he entered the nonmetallic field and has been in charge of several mines for R. T. Vanderbilt Co. **Richard H. Jahns**, recently appointed chairman, Div. of Earth Sciences, The Pennsylvania State University, beginning in September. A graduate of California Institute of Technology, he was a member of its faculty from 1946 until this year. **John S. Holland**, chief geologist, National Lead Co. After graduating from the University of Idaho, Mr. Holland went to work for Consolidated Mining & Smelting Co. at Kimberley, B.C. He joined National Lead in 1948.

Donald R. Irving has been nominated the Division's representative on the SME Transactions Editorial Committee and **Richard H. Jahns** will represent the Division on the SME General Editorial Committee as well as serving on the Executive Committee. Mr. Irving is assistant to the chief, Division of Minerals, U. S. Bureau of Mines.

T. L. Kesler, named Division representative on the SME Nominating Committee has been chief geologist at Foote Mineral Co. since 1953. **Lauren A. Wright**, geologist, California Division of Mines, has been named alternate.

Pre-Engineering by **KAISER ENGINEERS** answers basic plant expansion questions...

Profitability?

Faced with the decision to expand your plant facilities, you should first determine whether all elements combine to form a pattern of future profitability. Independent analysis of all aspects of your proposed program is the *Pre-Engineering* service offered by Kaiser Engineers. The studies and evaluations furnished by KE Pre-Engineering represent only one phase of total KE services. Kaiser Engineers designs and builds for the Steel industry...offers skilled experience in all types of facilities from raw material plants to finishing mills. From Pre-Engineering through design and construction, Kaiser Engineers provides complete one-company service and ingenuity based on years of experience.

Around the Sections

• The **El Paso Section** held a joint meeting with the Kidd Mining Club of Texas Western College on April 21 in the Student Union building. Senior students in mining and metallurgy gave reports on their theses.

The Section's last meeting until fall was its spring dinner dance held May 14 at the Del Norte Hotel.

• The **Tucson Subsection** of the Arizona Section heard John Harshbarger, professor of geology at the University of Arizona, talk on geological environment and groundwater reserves in Arizona at its May 11 meeting.

• AIME has a new local section, the 92nd. As of April 29, 1960 the **Carolinas Section** became independent of the Southeast Section and all of its official business on a local level will be carried out autonomously. At present the two Carolinas have two subsections: the Eastern Carolina Subsection includes that area of North Carolina east of Mecklenburg County and the Carolina Subsection includes that portion of North Carolina west of the eastern boundary of Mecklenburg County and all of South Carolina. It is hoped that in time other subsections will become active.

• Members of the **San Francisco Section** saw a color film entitled *Toquepala Target* at their May 18 meeting in the Engineers' Club. The film, concerning the new, large porphyry copper deposit in southern Peru, was presented by a representative of Utah Construction Co. who also answered questions about the project.

• The **Arizona Smelting Division** of the Arizona Section met May 7, 1960, in the Veterans of Foreign Wars Hall in Superior, Ariz. The program included the following talks: *Magma's Suspended Arch* by E. J. Caldwell of Magma Copper Co.; *Gaseous Refining of Blister Copper* by L. P. Klein of Phelps Dodge Corp.; and *Reformer Automation in Connection with Gaseous Refining of Blister Copper* by J. H. Davis, also of Phelps Dodge Corp.

• The **Southeast Section** meeting April 28, 1960, was held in Birmingham. Featured speaker of the evening was Donald G. MacDonald, southern district manager of the E. I. du Pont de Nemours & Co. extension division of the department of public relations. His subject was *From Research to Reality*.

Donald G. MacDonald addresses the Southeast Section at April meeting.

• The **Underground Mining Division** of the Arizona Section took an underground tour of the Magma Copper Co. east division mine as part of its June 4th meeting. During the afternoon a technical session was held at which papers on Magma's underground operations were presented. The members were guests of Magma Copper for dinner.

• Members of the **Adirondack Section** toured the Republic Steel Corp. plant at Lyon Mountain, N. Y., on April 30. The tour included the underground and open pit iron mines and crushing, concentrating, and sinter plants. Messrs. Crushberg and Knox discussed the geology and mining methods. Afterwards a dinner was held at the American Legion Home, where Allan Mogensen, the guest speaker, discussed the work simplification program as a means of improving industrial plant efficiency.

• The **Chicago Section's** annual president's night and dinner dance was held May 7 at the South Shore Country Club. A reception for Joseph L. Gillson and his wife preceded the dinner.

• Members of the **Geology Subdivision** of the Arizona Section met at the Morenci Branch of Phelps Dodge Corp. May 7. In the morning a technical session was held at which the following topics were presented:

From left to right: G. E. March and E. H. Oshier, both on the faculty of the South Dakota School of Mines, shown with E. O. Kirkendall, AIME secretary, and J. L. Gillson, AIME president, inspecting plans for the new mineral industries building to be completed in 1961 on the campus.

Historical Sketch of the Clifton-Morenci District by William C. Conger; *General Geology of the Morenci District* by Vance N. Bacon; and *Contact Mineralization and Alteration in the Morenci District* by Joseph J. Durek. A field trip was held in the afternoon. Phelps Dodge provided a luncheon, a cocktail party, and a banquet for the members.

• The **Washington, D. C. Section** met on May 3, 1960, at the Broadmoor Hotel to hear Willard Bascom, director of the Mohole Project at the National Academy of Sciences, give an illustrated lecture on this unique project to penetrate the earth's crust. The purpose and planning of this project, as well as the many problems to be overcome in drilling this 31,000-ft hole, almost half through water, were discussed.

• The **Black Hills Section** held a meeting April 7 at the Moosecamp Lodge in the Black Hills at which Joseph L. Gillson showed colored slides on the pre-Columbian ruins of Mexico. Student associate members enrolled at the South Dakota School of Mines and Technology and their wives were guests of the Section for the occasion. AIME secretary, Ernest Kirkendall, was another guest at the meeting.

• Ronald R. McNaughton, president-elect of AIME, addressed the **University of Minnesota** student chapter at a meeting April 21 in Minneapolis. His topic was *The Junior Engineer*. Also featured on the program was a discussion of underground mining of taconite by Eugene P. Pfeider and Donald H. Yardley, members of the faculty of the Minnesota School of Mines.

J. L. Gillson inspects a fossil skeleton on display in the paleontology laboratory of the South Dakota School of Mines.

William N. Holzmann has joined the staff at the Carlsbad operation of International Minerals & Chemical Corp. as manager, plant engineering. He comes to International from Escambia Chemical Corp., Pensacola, Fla., where he was service design engineer.

Byron G. Walker who had been an engineering aid with the U.S. Forest Service is presently serving in the U.S. Army as a Second Lieutenant with a topographic battalion surveying and printing maps of Europe.

Augustin L. Queneau metallurgical consultant to a number of metal companies and retired technical assistant to the president of U.S. Steel Corp., has been named the 1960 recipient of the Egleston Medal, Columbia University's highest award for distinguished engineering achievement. The presentation was made at the annual Engineering Dean's Day program April 23 in the Rotunda of Low Memorial Library. The Egleston Medal award was first made in 1939 to honor the memory of Thomas Egleston who founded the first School of Mines in the United States at Columbia in 1864.

George W. Mitchell has retired to Ajijic Jalisco, Mexico. He had been vice president and general manager with Eureka Corp. Ltd. and Rosita Mines Ltd., Nicaragua.

Personals

Julio H. Thaler has left Eagle-Picher Co. where he was a mining engineer to take a similar position with Republic Steel Corp. at the Tobin mine.

Charles C. Yeloushan has become assistant mine foreman for Mountaineer Coal Co. He has recently received an M.S. degree in mineral economics from Pennsylvania State University. He had also been working as a mine engineer in training with Rochester & Pittsburgh Coal Co.

Carl S. Weylandt, president and one of the founders of Syntrol Co., Homer City, Pa., retired April 30th after more than 40 years service. He will be succeeded by **Byron K. Hartman**. Mr. Weylandt will continue as a member of the board of directors of Syntrol, and of the Link-Belt Co., Chicago, of which Syntrol is a subsidiary. Mr. Hartman joined the Syntrol Co. as executive vice president and general manager in August 1959. Previous to that he had been associated with

the Link-Belt Co. for 21 years.

B. K. HARTMAN

C. S. WEYANDT

J. K. Whatmough formerly a mining engineer with the Ontario Securities Commission, has become general manager for Swanson Construction Co. Ltd. in Winnipeg.

Maurice A. Chaffee has joined The New Jersey Zinc Co. as a geologist in Austinville, Va., following a six-month stint in the U.S. Army Corps of Engineers.

After 16 years as mining geologist with the International Cooperation Administration and predecessor agencies, **Enzo De Chetelat** plans to go into business as a consulting mining geologist in Monsey, N.Y., following his return from abroad where he is doing research work at the Oceanographic Laboratory of the University of Paris. He also plans to attend the International Geological Congress in Copenhagen in August.

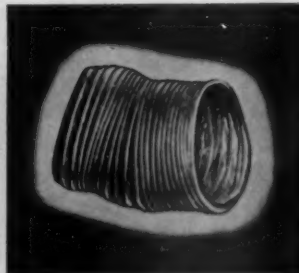

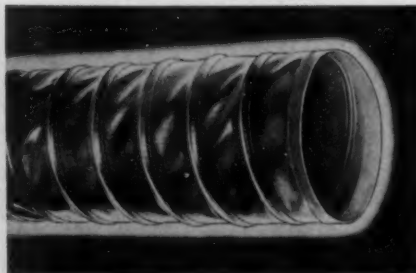

Edward P. Kyburz who joined Cerro de Pasco Corp. after receiving his M.S. degree from the University of Arizona in June 1959 has been assigned to the Rio Blanco Project in Chile as a mining engineer.

Byron S. Day has become assistant plant superintendent for Electro-Nuclear Metals Inc. He had been with Winnemucca Mining Co. as manager for the last three years.

Upon completion of his graduate studies at the University of California, **William H. Powers** has become a junior technologist at U.S. Steel's Applied Research Laboratory in Pittsburgh.

Paul F. Kerr, Newberry professor of mineralogy at Columbia University, was awarded an honorary D.S. degree by Occidental College, Los Angeles, at its Founders' Day exercises March 24th. The award is in recognition of Dr. Kerr's contribution to the national supply of uranium raw materials during World War II and for his fundamental contributions to the study of clay minerals and studies of the origin and emplacement of mineral deposits

It's here . . . New ABC Mine Duct wire reinforced ventilation tubing

For efficient, economical removal by suction of fouled air and dust from the working face of mines. Can also be used for blowing in fresh air. Sturdy fabrics used are neoprene coated both sides to resist friction and are airtight. Withstands flexing and retracting. Easy to hang on carrier wire. Simple to couple. Yellow for visibility. Send for Bulletin 360.

• WEAR RESISTANT

Resistant to scuffing, acids, oils, moisture, atmosphere. Wire is totally enclosed. No spiral stitches to wear out.

• LIGHTWEIGHT

1/3 the weight of metal duct of comparable diameter. One man can erect Mine Duct.

• FLAME RESISTANT

Resistant to combustion — will not support flame.

• RETRACTABLE

Can be compressed into small space for carrying or storage.

ABC AMERICAN BRATTICE CLOTH CORPORATION

330 Argonne Road • Warsaw, Indiana

including copper, tungsten, and uranium.

U. S. Steel Corp recently announced the appointment of **J. Robert Ferguson, Jr.**, as assistant vice president-design and construction in the Engineering Dept. Mr. Ferguson's former position was that of assistant vice president-appropriations, a post he held since 1958. He has been with U.S. Steel since 1940.

William J. Leek has been transferred from the Sunflower Ordnance Works, Lawrence, Kan., where he was project engineer to the engineering department of Hercules Powder Co.'s offices in Wilmington, Del.

R. E. Hamilton, formerly mine manager for Bethlehem Copper Corp. in British Columbia has taken a job with Magnet Cove Barium Corp., N.S., as mine superintendent.

Theodore B. Counselman was one of a group of AIME members who met Generalissimo Trujillo during their visit to the Dominican Republic during the post Annual Meeting trip to the Caribbean. The group was received at the National Palace by Trujillo and later were shown the palace.

Don M. Coulter has gone with the Bureau of Indian Affairs in Muskogee, Okla. He had been living in Miami, Okla.

Generoso V. Sancianco has joined the faculty of the Mapua Inst. of Technology in Manila. He had been chief engineer with Pacific Equipment Corp.

J. C. Guyton has recently retired from the Coal & Iron Div. of U.S. Steel Corp. He will continue to reside in Bessemer, Ala.

Bruce M. Lane formerly a metallurgist with Arthur D. Little Inc., Cambridge, Mass., has joined the International Minerals & Chemical Corp. as a mineral development specialist. He is making his home in Evanston, Ill.

Earl L. Rau has become associated with the Colorado School of Mines Research Foundation as a metallurgical engineer. He had formerly been project engineer for Inflico Inc. in Tucson, Ariz.

Link-Belt Co. recently announced the appointment of **Edward L. Mills** as district manager at Huntington, W. Va. to succeed **David W. Stevens** who retired after nearly 48 years of service with the company. **Earl W. Habberstad** succeeds Mr. Mills as district manager at Duluth. Mr. Mills joined Link-Belt at their Chicago plant in 1948. He was appointed district manager at Duluth

E. L. MILLS

D. W. STEVENS

E. W. HABBERSTAD

E. B. GREEF

in 1958. Mr. Habberstad came to Link-Belt as a draftsman in the Minneapolis plant in 1948. He joined the sales department in 1950 and was transferred to Duluth as sales representative in 1951.

Edward B. Greef is the new district manager for the San Francisco office of the Traylor Engineering & Manufacturing Div. of Fuller Co. He will be in charge of sales in California, Nevada, Arizona, and New Mexico. Prior to joining Traylor, Mr. Greef had been a sales representative for Mines Engineering and Equipment Co. in San Francisco.

The American Zinc Inst. recently elected officers and directors at its annual meeting of the Board of Directors. All of its officers were reelected to serve for another year. They are: **R. G. Kenly**, president; **T. A. Campbell**, vice president; **H. D. Carus**, vice president; **E. H. Snyder**,

vice president; **C. H. LeFevre**, treasurer; and **J. L. Kimberley**, vice president and secretary. Directors elected for the term expiring 1963 are: **T. A. Campbell**, **A. C. Elde**, **S. S. Goodwin**, **T. K. Graham**, **H. E. Lee**, **G. W. Potter**, **E. A. Torney**, **H. I. Young**, and **M. M. Zoller**

Charles B. Lakin has been elected executive vice president and chief executive officer of The Berwind-White Coal Mining Co. and also was elected to the same position in Berwind-White's affiliates, New River and Pocahontas Consolidated Coal Co. and Kentland-Elkhorn Coal Co. Mr. Lakin has been with Berwind-White since 1932 and a vice president since 1956. **Charles E. Dunlap** and **Charles G. Berwind**, president and vice president of the companies, have retired from those positions. Mr. Dunlap will be a chairman of the board and Mr. Berwind will continue as a director.

The board announced that **Edward J. Behn** and **Charles G. Berwind, Jr.**, were elected vice presidents of the three firms. **Zeb H. Herndon** was chosen vice president-lands of New River and Pocahontas Consolidated Coal Co. **Leroy A. French** was made an assistant vice president of Berwind-White, and **Robert H. Seese**, general manager.

Certificates were presented to 21 Colorado School of Mines seniors upon their election to *Who's Who Among Students in American Colleges and Universities*. Three of the recipients were Denver natives: **Andrew J. Dickson**, **Robert B. Hoffman**, and **Carl W. Samuel**. Other Colorado residents included **William N. Houston**, Rye; **Robert F. Jenkins, Jr.**, Julesburg; **George C. Kane**, Salida; **John J. Selters**, Monta Vista; and **John R. Smith**, Stratton. Out-of-state award winners were: **Gerald L. Askevold**, Montana; **A. Lawrence Holmes, Jr.**, New York; **Lennox L. Hagemann**, New York; **S. Bruce Heister**, California; **Robert H. Karlsson**, Arizona; **Kenneth L. Lerner**, Florida; **John D. Longnecker**, Pennsylvania; **Ted L. Myers**, New Mexico; **L. Douglas Patton**, Kansas; **Frederick P. Schwarz**, New Jersey; **Kenneth L. Spalding**, California; **Richard E. Van Doren**, North Carolina; and **Glenn A. Walton**, Tennessee.

Harry E. Haynes has been managing the affairs of the company and will continue in an advisory capacity for the new venture. **Dolf W. Fieldman**, who has been with the Carey organization since 1956, will be the geologist in charge of the program.

R. C. Howard-Goldsmith is operating an Ag-pb property he has leased in southern Chile. Prior to this he was office engineer for Wells Overseas Ltd. in Lima, Peru.

Robert M. Jensen, formerly district manager for Allen-Sherman-Hoff Pump Co. at the New York office, has become chief engineer for A-S-H Industries Inc. in Frazer, Pa.

Howard W. Decker has joined Pennsylvania Glass Sand Corp. as project engineer after three and a half years as senior metallurgical assistant for Union Carbide Metals Co.

Rodney K. Pertile has left Jones & Laughlin Steel Corp., where he served as district mining engineer, to take the job of chief mining engineer with Kermac Nuclear Fuels Corp.

P. AMBROSIANI

R. W. FISHER, JR.

Peter Ambrosiani has recently been appointed general manager of sales for Wilcox Manufacturing Co. Prior to this he was manager of western mining territories for the Jeffrey Manufacturing Co. His office will be at the company's factory location in Raleigh, W. Va. The company manufactures continuous mining machines for thin vein coal seams.

R. W. Fisher, Jr., formerly principal engineer with Kaiser Engineers, has been elected a vice president of Kaiser Engineers Overseas Corp. His first assignment will be that of project manager of a 100,000-ton per year portland cement plant being designed and constructed for Mysore Cements Ltd. at Ammasandra, Mysore, India. Mr. Fisher joined the Kaiser organization upon graduation from the University of California in 1941 and has been with them ever since except for a period in the army during World War II.

John W. Svanholm has been appointed advisor to the government of Thailand, where he will plan and direct nuclear raw materials exploration and instruct Thai geologists in geophysical-geological methods. He is attached to the International Atomic Energy Agency, a UN related organization. Prior to his appointment, Mr. Svanholm was consultant with the Mineral Resources Development Corp. to the government of Burma.

Foot Mineral Co. recently announced the appointment of **William M. Raynor** as general sales manager to succeed **Boyd E. Cass**. Mr. Raynor has been with Foot since 1942 and has been director of purchasing since 1956.

Colin C. McAneny has become assistant editor of *Engineering & Mining Journal*. He was previously an engineer trainee with Kennecott Copper Corp.

L. L. McMurray, vice president and engineer with The Feldspar Corp., has moved from their Spruce Pine, N. C. operation to Connecticut to supervise the construction of a new feldspar plant in Middleton with a capacity of 600 tpd (feed) producing both glass and pottery grades. It is expected to go into operation in September 1960.

B. E. Ashton has taken a position as field engineer with Cyanamid Australia Pty. Ltd., after eight years as senior metallurgist with Australian Mineral Development Laboratories.

T. E. CONGDON

W. J. CAREY

A joint mining, exploration, and investment program has been established by **Thomas E. Congdon** of Denver and **William J. Carey** of Dallas, with offices in Denver. Mr. Congdon will direct the program in the Rocky Mountain states. He had been financial manager of western operations for Climax Molybdenum Co. working with the company's exploration department guiding investments in new mining ventures.

Mr. Carey is an independent oil producer who has been active in the mining business since 1954, operating as William J. Carey Mining Co.

Glen Sarff, who served as general plant foreman of the tailing reduction plant at the Hill Annex iron ore mine for the Minnesota Ore Div., Jones & Laughlin Steel Corp., has been transferred to the division's new Lind-Greenway ore plant as general plant foreman.

The Aluminum Co. of America recently announced the appointment of **Roy F. Miller** as general manager of the raw material division.

Philip A. Ray, manager of the Denver office of Hercules Powder Co.'s naval stores department, retired May 1. He joined Hercules in 1928 as a metallurgist in the Colorado School of Mines laboratory. When the company's naval stores department opened a district office in Denver in 1944, Mr. Ray was sent there as district manager, after working 16 years in the home office in Wilmington, Del.

Walter Hochschild was elected chairman and chief executive officer of American Metal Climax Inc. at a recent meeting of the board of directors. **Frank Coolbaugh**, formerly head of the Climax division, was named president, succeeding Mr. Hochschild. The new chairman takes over from **Arthur H. Bunker**, who will retire this summer. Mr. Bunker was elected honorary chairman and head of the executive committee. **Weston G. Thomas** resigned as executive vice-president.

Edwin B. Douglas, formerly manager for Calera Mining Co. in Cobalt, Idaho, has taken a position with Managanes Inc. at Henderson, Nev., as general manager.

Promotion of **Martin James**, **Donald J. Goodwin**, and **Michael W. Bremner** to new executives posts was recently announced by the Atlas Copco organization. James, former

rock drill sales manager for Atlas Copco Eastern, was appointed sales manager of Atlas Copco Pacific's mining and construction divisions with headquarters in San Carlos, Calif. Goodwin, formerly northeast district manager for Atlas Copco

Eastern, was named to replace James at Paramus, and Bremner, formerly sales representative in the Niagara Falls region, was appointed northeast district manager.

John A. Patterson, chief of the Ore Reserves Section at the Grand Junction Operations Office of the Atomic Energy Commission, was awarded a citation and check for \$300 in recognition of the outstanding manner in which he has performed his duties during the past three years.

Wilbur F. Criswell has become mining engineer for Union Carbide Nuclear Co. Prior to this he was em-

ployed as mining engineer with Ray-O-Vac and had spent November through February examining mineral deposits in Mexico, Brazil, and Peru.

R. J. LINNEY

A. A. WALLACH

Reserve Mining Co. recently announced the election of **Robert J. Linney** as president and a director of the company. He will also serve as a member of the executive committee of Reserve Mining. He became manager of operations for Reserve in 1950 and in 1956 was named vice president in charge of operations. Two years later he was elected executive vice president.

A. A. Wallach, mineral industries development engineer, Kaiser Engineers, has been reassigned to the headquarter's office in Oakland, Calif. He will be working as development engineer throughout the U. S. and Canada for engineering and construction services provided by the company in connection with mining and quarrying, rock products, ore processing, and nonferrous metals production. Prior to this new assignment, Mr. Wallach was project manager responsible for the design and construction of an iron ore concentration pilot plant for the Wabush Iron Co., Labrador.

J. M. Van de Plasse has left United Development Corp. Pty. Ltd., where he was chief engineer, to become a sales engineer for Allis-Chalmers Australia Pty. Ltd.

Robert Henderson, general manager for Climax Western Operations, was elected president of the Colorado Mining Association. **J. Paul Harrison**, American Smelting and Refining Co., was elected as one of the vice presidents.

Gil A. Rennhack has joined Atlas Powder Co. as a sales engineer. He previously worked for Sun Electric Corp. as an assembler.

The National Coal Association recently announced some new appointments. **G. Don Sullivan** was named a special assistant to the Association's president, Stephen F. Dunn. Mr. Sullivan has served on the administrative staff for the past eight years. In addition to coordinating the Association's special attention to major industry problems, he will act as liaison between the Association and other organizations representing coal and allied industries.

SYNTRON

Mechanical

VIBRATING CONVEYORS

for heavy tonnage conveying

—multi-purpose units designed for high speed conveying of coal and ores, run-of-mine or screened and other bulk materials in densities ranging from 5 to 400 pounds per cubic foot and in sizes from powder to large chunks.

They can be fitted with screen sections to provide both conveying and screening.

Low initial cost—low power requirements—simple construction assures maximum performance with low maintenance.

SYNTRON Vibrating Conveyors are available in lengths and widths to meet most requirements.

Obituaries

Homer A. Mann

An Appreciation By
Weston Bourret

The many friends of Homer Mann (Member 1935) throughout the mining world will be saddened to learn of his tragic death in a plane crash near Minersville, Utah, on Jan. 13, 1960. His kindness, directness, unfailing courtesy, and patience, as well as outstanding capabilities, won him recognition among all who knew him.

Born in Mexico of American parents, Homer returned to the United States as a young child and was educated in Texas and California. After graduation with a B.S. degree in mining from the University of California in 1935, he started his career with the Masbate Consolidated Mining Co., a large gold operation on Masbate Island in the Philippines and held the position of chief engineer and assistant manager at the time of the Japanese attack on Pearl Harbor. He succeeded in getting to Cebu and joined the guerrilla forces under Colonel Peralta in January of 1943. As a guerrilla fighter and officer, Homer served on the Island of Panay and participated in the operation of concealed radio stations so essential to intelligence on enemy movements in the Panay Strait. In March 1944, together with several other Americans on Panay, he was evacuated by the USS Angler and ordered to Australia for intelligence work related to the forthcoming invasion. Following a brief period in the United States and reunion with his family, Homer returned to the Philippines in 1947 with his former employer, Colonel Andres Sariano; there he continued his mining career and was appointed consulting engineer in the Manila office of International Engineering Corp. and its affiliated companies.

During the Korean conflict Homer returned to the United States, this time permanently, and came to Washington, D.C., where he worked for two years with DMPA as chief of the Rare Metals Branch under Tom Lyon and Howard I. Young. He joined Utah Construction & Mining Co. as an executive in the Exploration Dept. in 1953 and since that time has played a major role in the development of that company's uranium, coal, and iron ore properties. At the time of his death Homer was manager of Mining Services for Utah Construction & Mining Co.

George Cherry Lipsey

An Appreciation By
H. A. Pearce & Vinton H. Clarke

The untimely death of George C. Lipsey (Member 1936) at age 57 in Vancouver, B. C., on Jan. 14, 1960, has saddened a host of friends and associates throughout Canada and the United States, and the mining industry has lost one of its most competent leaders.

George was born in Ottawa, of Irish parentage. He received his early education there, then later moved to Vancouver where he attended the University of British Columbia, from which he was granted the degree of B.A.Sc. in mining engineering in 1924. His further education in his chosen profession was according to the classical tradition—starting as a mucker with Britannia Mining & Smelting Co., and working up the line as shift boss, surveyor, foreman, and assistant mine superintendent successively. Then with the opening of the Chelan Div. of the Howe Sound Co. at Holden, Wash., in 1937 he was transferred there as manager. About a year later he returned to Britannia to help cope with certain serious underground problems which had arisen in the meantime.

When development and construction on the Snow Lake, Manitoba, gold project began in 1946, George assumed charge as manager, which post he occupied until in 1956 he returned once again to Britannia as vice president in charge of Canadian operations and exploration activities of the Howe Sound Co. When the slide in base metal prices forced a shutdown of Britannia operations late in 1957, he resigned to accept shortly thereafter the position of general manager of the iron mine operations of The Empire Development Co., Vancouver, which he occupied until his death.

In 1958 he was elected president of the Professional Engineers of British Columbia, which recognition by his fellow engineers must have been a great satisfaction to him, as it certainly was to all of us who so highly respected his ability and integrity.

Necrology

Date Elected	Name	Date of Death
1931	Jos. G. Calverley	Nov. 28, 1959
1917	W. Lorrain Cook	Mar. 30, 1960
1936	Walter K. Farst	Unknown
1936	Otto Hehlert	June 1959
1927	Harry Hey	Apr. 11, 1960
1950	Fred K. Houston	Apr. 13, 1960
1911	R. M. Macauley	Apr. 7, 1960
1935	A. A. McKinney	July 1959
1944	Burton M. Reynolds	Feb. 8, 1960
1959	Louis M. Wolford	Jan. 6, 1960
1954	Virgil W. Whitmer	November 1959

Membership

Proposed for Membership
Society of Mining Engineers of AIME

Total AIME membership on May 31, 1960, was 33,606; in addition 2,449 Student Members were enrolled.

ADMISSIONS COMMITTEE

S. S. Cole, Chairman; F. A. Ayer, Vice Chairman; F. Wm. Blocher, Jr.; Jack B. Graham; C. H. Lambur; Pauline Moyd; R. H. Ramsey; A. D. Rood; W. J. Rude.

The Institute desires to extend its privileges to every person to whom it can be of service, but does not desire as members persons who are unqualified. Institute members are urged to review this list as soon as possible and immediately to inform the Secretary's office if names of people are found who are known to be unqualified for AIME membership.

Members

Michael T. Artam, San Francisco
John Barclay, Obuasi, Ghana
Martin G. Beyer, Monrovia, Liberia

DENVER

Steel Head MILLS

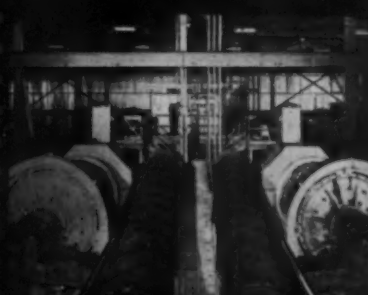

... specified by

URANIUM MILLS

Here are a few ...

Gunnison Mining Company, Gunnison,
Colorado

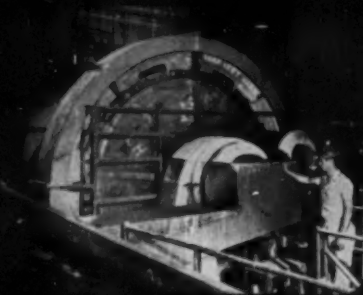

Homestake-New Mexico Partners,
Ambrosia Lake District, Grants, New Mexico

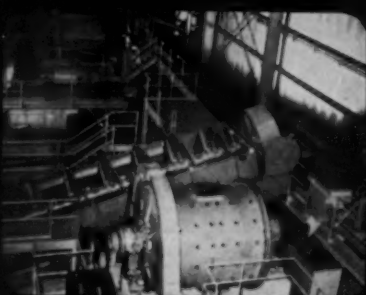

Western Nuclear Corporation,
Jeffrey City, Wyoming

Mines Development, Inc.,
Edgemont, South Dakota

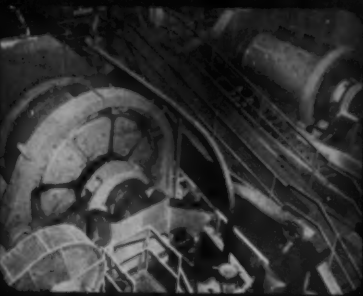

Phillips Petroleum Company, Ambrosia
Lake District, Grants, N. Mex.

Uranium Reduction Company,
Moab, Utah

COG Minerals Corporation,
Fry Canyon, Utah

Slocquahanna Western, Riverton,
Wyoming

West Mifflin Oil Industries,
Shiprock, New Mexico

These DENVER Mills were selected on the basis of specifications, quality, dependability and experience of others.

The recent trend is to specify DENVER Mills. Before you buy your next mill, compare specifications—feature for feature, size for size, dollar for dollar, capacity for capacity. You will then specify a "DENVER MILL."

DENVER Mills are available in sizes up to 10' dia. x 20' long.

Write for bulletin No. DE-528.

At new Toquepala mine of Southern Peru Copper Corporation, four Ty-Rock Screens are used at Crushing Plant, one Ty-Rock at the Sample Mill. Ty-Rocks were chosen because of their proven ability to handle large tonnages of ore at exceptionally low cost per ton. Ty-Rock fully controlled vibration assures long life.

TYLER "TY-ROCKS" SCREEN ORE AT LOW COST PER TON FOR SOUTHERN PERU COPPER

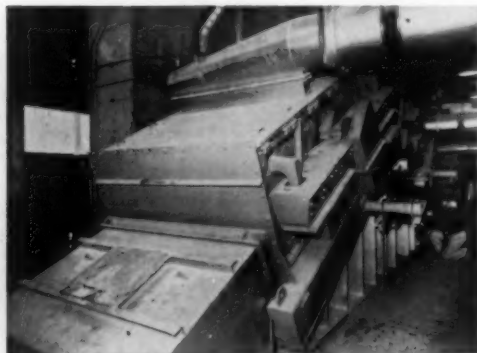

For the ultimate in heavy-duty screen performance choose Ty-Rocks. Full information in Catalog 68 — write for free copy.

The W. S. TYLER Company • Cleveland 14, Ohio

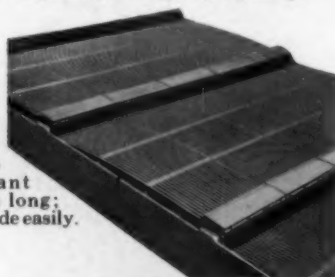

OFFICES: New York • Chicago • Boston • Philadelphia • Atlanta • Dallas
Los Angeles • San Francisco • Baltimore • Birmingham • Houston • Minneapolis
Pittsburgh • Salt Lake City • The W. S. Tyler Company of Canada, Limited,
St. Catharines, Ontario • OFFICE: Montreal

In crushing plant each of the four 6' x 12' Ty-Rocks screen 550 tons per hour of minus 2" porphyry copper ore, 3 to 5% moisture, with approximately 160 tons per hour passing through $\frac{3}{8}$ " openings.

Special decks used on these screens are made of abrasion resistant alloys. Service life is long; replacement can be made easily.
